## B.E - Mechanical Engineering

# CURRICULUM AND SYLLABI

## Choice Based Credit System

**REGULATIONS 2021**

### DEPARTMENT VISION

To produce competent Mechanical Engineers of excellent technical and managerial skills with profound morality for global, national and confront societal development.

### DEPARTMENT MISSION

1. To provide quality education in Mechanical Engineering with inter disciplinary approach, encouraging innovation, research and entrepreneurship.
2. To make the department self-reliant through multiple programs with excellent curriculum, best practices and industry exposure.
3. To inculcate technical, professional, leadership skills, moral ethics and lifelong learning

**DEPARTMENT OF**  
**MECHANICAL ENGINEERING**

**ENGINEERING COLLEGE**  
**AN AUTONOMOUS INSTITUTION**

## **Department of Mechanical Engineering**

### **Curriculum and Syllabi - R 2021-UG CHOICE BASED CREDIT SYSTEM(CBCS)OUTCOME BASED EDUCATION (OBE)**

#### **Vision of the Department**

To produce competent Mechanical Engineers of excellent technical and managerial skills with profound morality for global, national and confront societal development.

#### **Mission of the Department**

1. To provide quality education in Mechanical Engineering with inter disciplinary approach, encouraging innovation, research and entrepreneurship through world class infrastructure and proficient teachers.
2. To make the department self-reliant through multiple programs with excellent curriculum, best practices and industry exposure.
3. To inculcate technical, professional, leadership skills, moral ethics and lifelong learning.

# Programme Educational Outcomes (PEOs)

Bachelor of Mechanical Engineering curriculum is designed to impart Knowledge, Skill and Attitude on the graduates to

**PEO 1:** Have a successful professional career in Mechanical Engineering and allied industries, either by employment or through entrepreneurship.

**PEO 2:** Establish competency in Design, Thermal, Materials and Manufacturing system with ethics and social responsibility.

**PEO 3:** Have a continual receptiveness for leadership and social challenges.

# Programme Outcomes(POs)

## **Engineering Graduates will be able to:**

1. **Engineering Knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem Analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/Development of Solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct Investigations of Complex Problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern Tool Usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The Engineer and Society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and Sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. **Individual and Team Work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12. Life-Long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

# Programme Specific Outcomes (PSOs)

On successful completion of the Mechanical Engineering Degree programme, the Graduates shall exhibit the following

**PSO 1:** Apply the knowledge gained in Mechanical Engineering for **design**, development and **manufacture** of engineering systems.

**PSO 2:** Analyze, interpret and provide solutions to global needs of engineering industries, the **real life mechanical engineering problems** and **thermal systems** with regard to ethics, environment and society.

# **SEMESTER I**

21MA1201	MATRICES AND ADVANCED CALCULUS	L	T	P	C
		3	1	0	4

**Preamble:**

The course consists of topics in Matrices, Differential calculus, Integral calculus, Differential Equations and Vector calculus with applications to various engineering problems. This course will cover the following main topics: Cayley Hamilton Theorem, Linear differential equations of second order with constant coefficients, Methods of Variation parameter, Taylor's expansion of two variables, Maxima and Minima for two variables, Area and Volume in a multiple integrals, Green's theorem and Gauss divergence theorem.

**Prerequisites for the course:**

Students should have basic knowledge about matrices, differentiation and integration

**Objectives**

1. To apply advanced matrix knowledge to Engineering problems
2. To familiarize with the applications of differential equations.
3. To familiarize with the functions of several variables
4. To have Knowledge in Multiple integrals
5. To improve their ability in Vector calculus.

**UNIT I**

**MATRICES**

**9+3**

Matrices - Characteristic equation – Eigen values and Eigen vectors of a symmetric and non symmetric matrix – Properties of Eigen values and Eigen vector – Cayley – Hamilton theorem and its applications

**SUGGESTED EVALUATION METHODS:**

- Tutorial Problems on Eigen values , Eigen Vectors and Cayley Hamilton Theorem and Add MATLAB and for application Add Power method to find Eigen value & Eigen vector

**UNIT II**

**ORDINARY DIFFERENTIAL EQUATIONS**

**9+3**

Differential Equations – Complementary Function – Particular Integral - Linear equations of second order with constant coefficients of types exponential, trigonometry, polynomial and its combination forms - Methods of Variation of parameter - Engineering Applications.

**SUGGESTED EVALUATION METHODS:**

- Tutorial Problems on Linear differential equations of different types and Method of Variation parameters.

**UNIT III**

**FUNCTIONS OF SEVERAL VARIABLES**

**9+3**

Function of two variables – Partial derivatives – Taylor's expansion for two variables – Maxima and Minima for two variables – Jacobians of two and three variables – Euler's theorem for homogeneous function.

**SUGGESTED EVALUATION METHODS:**

- Tutorial Problems on Taylor's series, Jacobians, Maxima and Minima for two variables

**UNIT IV**

**MULTIPLE INTEGRALS**

**9+3**

Definite Integrals – Properties of definite integrals - Double integration in Cartesian coordinates – Area as a double integral in Cartesian coordinates – Triple integration in Cartesian coordinates – Volume as a Triple Integral

**SUGGESTED EVALUATION METHODS:**

- Tutorial Problems on Area , Triple integration and Volume

**UNIT V**

**VECTOR CALCULUS**

**9+3**

Vector dot product and Vector cross product - Gradient, divergence, curl – Solenoidal and irrotational fields – Unit normal vector - Angle between two surfaces - Directional derivatives – Green's theorem, Gauss divergence theorem (without proof) – Engineering Applications.

**SUGGESTED EVALUATION METHODS:**

- Tutorial Problems on Angle between two surfaces, Green's theorem, Gauss divergence theorem.

<b>Total Periods</b>	<b>45 + 15 = 60 Periods</b>
----------------------	-----------------------------

**Suggestive Assessment Methods**

Continuous Assessment Test (20 Marks)	Formative Assessment Test (20 Marks)	End Semester Exams (60 Marks)
1. Descriptive Questions	1. Assignment 2. Online Quizzes	1. Descriptive Questions

**Outcomes**

Upon completion of the course, the students will be able to:

- CO1: Find the eigen values, eigen vectors, inverse and the positive powers of a square matrix (Apply)
- CO2: Identify the suitable method to solve second and higher order differential equations (Apply)
- CO3: Find the maxima and minima for a given function with several variables, through by finding stationary points (Apply)
- CO4: Compute area and volume using double and triple integration. (Apply)
- CO5: Apply the concepts of Differentiation and Integration to Vectors. (Apply)

**CO Vs PO Mapping and CO Vs PSO Mapping:**

C	PO	PO	PO	PO	PO	PO	PO	PO	PO	PO1	PO1	PO1	PSO	PSO	PSO
0	1	2	3	4	5	6	7	8	9	0	1	2	1	2	3
1	3	2	1	1	1			1	1			1			
2	3	2	1	1				1	1			1			
3	3	2	1	1				1	1			1			
4	3	2	1	1				1	1			1			
5	3	2	1	1				1	1			1			

**COURSE LEVEL ASSESSMENT QUESTIONS****COURSE OUTCOME 1 (CO 1) : (Apply)**

1) Compute the eigen values and eigen vectors for the Symmetric matrix  $A =$

$$\begin{bmatrix} 6 & -2 & 2 \\ -2 & 3 & -1 \\ 2 & -1 & 3 \end{bmatrix}$$

$$\begin{bmatrix} 1 & -1 & 4 \\ 3 & 2 & -1 \\ 2 & 1 & -1 \end{bmatrix}$$

2) Find  $A^{-1}$  and  $A^4$  using Cayley Hamilton Theorem for the matrix  $A =$

**COURSE OUTCOME 2 (CO 2) : (Apply)**

1) Solve  $(D^2 - D + 1)y = \sin \sin 2x + e^{-4x}$

2) Solve  $(D^2 + )y = \tan \tan ax$  by using method of variation of parameters.

**COURSE OUTCOME 3(CO 3) : (Apply)**

1. Find the extreme values of the function  $(x, y) = x^3 + y^3 - 12x - 3y + 20$ .

2. Calculate the maxima and minima of the function  $(x, y) = x^3 y^2 (1-x-y)$ .

**COURSE OUTCOME 4(CO 4) : (Apply)**

1) Find the area of the ellipse  $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$ .

2) Find  $\int_0^a \int_0^b \int_0^c xyz \, dz \, dy \, dx$

**COURSE OUTCOME 5(CO 5) : (Apply)**

1. Find the directional derivative of  $\phi = xy^2 + yz^3$  at the point  $(2, -1, 1)$  in the direction of  $\vec{i} + 2\vec{j} + 2\vec{k}$ .

2. Using Green's theorem, find  $\int_C (x^2 - y^2) dx + 2xy dy$  where C is the boundary of the rectangle in the XOY-plane bounded by the lines  $x = 0, x = a, y = 0, y = b$ .

3. Verify Gauss divergence theorem for  $\vec{F} = 4xz\vec{i} - y^2\vec{j} + yz\vec{k}$  over the cube bounded by  $x = 0, x = 1, y = 0, y = 1, z = 0$  and  $z = 1$ .

21PH1302	ENGINEERING PHYSICS (COMMON TO CIVIL & MECH)			L	T	P	C
				3	0	0	3
<b>Preamble</b>							
This course aims in imparting the fundamental connection of physics and engineering with machines and materials by incorporating the basic concepts & principles of physics to encompass the application in engineering.							
<b>Prerequisites for the course</b>							
Students should have Basic theoretical concepts of Physics in XI and XII							
<b>Objectives</b>							
<ol style="list-style-type: none"> <li>To enable the students to gain knowledge on properties of matter.</li> <li>To inculcate knowledge on heat transfer.</li> <li>To study the basics of acoustics and ultrasonics.</li> <li>To understand the crystal parameters and to classify the type of the defect present in the crystal.</li> <li>To explore the wide advancement in engineering materials by motivating the applications of quantum mechanics.</li> </ol>							
<b>UNIT I</b>	<b>PROPERTIES OF MATTER</b>						<b>9</b>
Elasticity - Poisson's ratio and relationship between moduli (qualitative) - Stress-strain diagram - Factors affecting elasticity - Torsion pendulum -Determination of rigidity modulus- Moment of inertia of a body (regular)- Bending of beams - Bending moment - Cantilever - Theory and experiment of Young's modulus determination - Uniform and non-uniform bending - I shaped girders.							
<b>UNIT II</b>	<b>THERMAL PHYSICS</b>						<b>9</b>
Transfer of heat energy – thermal expansion of solids and liquids – expansion joints – bimetallic strips – thermal conduction, convection and radiation – heat conductions in solids – thermal conductivity – Lee's disc method: theory and experiment – thermal insulation – applications: heat exchangers, refrigerators, ovens and solar water heaters.							
<b>UNIT III</b>	<b>ACOUSTICS AND ULTRASONICS</b>						<b>9</b>
Classification of Sound- decibel- Weber–Fechner law –Absorption Coefficient and its determination-Sound absorbing materials –factors affecting acoustics of buildings and their remedies. Production of ultrasonics by magnetostriction and piezoelectric methods - Engineering applications of Ultrasonics -Non-destructive testing- Pulse echo technique.							
<b>UNIT IV</b>	<b>SOLID STATE PHYSICS</b>						<b>9</b>
Single crystalline, polycrystalline and amorphous materials – single crystals: unit cell, crystal systems, Bravais lattices, coordination number and packing factor for SC, BCC, FCC, HCP – Crystal imperfections: point defects, line defects – Burger vectors. Applications: Powder X-ray diffraction							
<b>UNIT V</b>	<b>ADVANCED ENGINEERING MATERIALS</b>						<b>9</b>
Metallic glasses: Types, Glass forming ability of alloys, melt spinning process and applications. Shape memory alloys (SMA): Phase, shape memory effect, pseudo elastic effect NiTi alloy, application, Nanomaterials: Preparation (bottom up and top down approaches) -Pulsed Laser Method- Ball Milling Method – properties and applications.							
<b>Total Periods</b>						<b>45</b>	
<b>Suggestive Assessment Methods</b>							
<b>Continuous Assessment Test (20 Marks)</b>		<b>Formative Assessment Test (20 Marks)</b>			<b>End Semester Exams (60 Marks)</b>		
CAT 1 – 10 Marks CAT 2 – 10 Marks Descriptive Questions		<ol style="list-style-type: none"> <li>Assignment</li> <li>Online Quizzes</li> <li>Problem-Solving Activities</li> </ol>			Descriptive		

--	--	--

### Outcomes

**Upon completion of the course, the students will be able to:**

<b>CO1</b>	Recognize the concept of elasticity, stress, strain and bending moments as well as Uniform and non-uniform bending in beams. (Understand)
<b>CO2</b>	Apply the thermal applications to various home appliances. (Apply)
<b>CO3</b>	Understand the characteristics of Music and Noise, Noise pollution and its control using the basic concepts of acoustics and know the principle and properties of ultrasonics using different testing methods. (Understand)
<b>CO 4</b>	Demonstrate an understanding of several key areas of Crystal Physics. (Understand)
<b>CO 5</b>	Identify different types of material processing techniques for advanced materials. (Understand)

3	3	2	1				1	1				1		
4	3	2					1	1				1		
5	3	2					1	1				1		

## **COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1:** Recognize the concept of elasticity, stress, strain and bending moments as well as Uniform and non-uniform bending in beams. (Understand)

1. A Scale is under depression at the free end of a cantilever due to load. Describe an experiment to determine the young's modulus of the cantilever using this expression.
2. Give the theory of torsion pendulum and describe a method to find the moment of inertia of an irregular body.
3. How will you determine the young's modulus of material of a bar by non-uniform Bending method? Explain briefly the theory behind the determination of young's modulus.

**COURSE OUTCOME 2:** Apply the thermal applications to various home appliances. (Apply)

1. Can heat exchange through a medium, explain their detailed overview depending on the medium. .
2. Imagine a quantity of heat flowing through a metal slab whose faces are kept at two different temperatures. Determine the thermal conductivity of a bad conductor.
3. The total area of a glass window pane is  $0.8 \text{ m}^2$ . Calculate how much heat is conducted per hour through the glass window pane if the thickness of glass is 3 mm. The temperature of the inside surface is  $25 \text{ }^\circ\text{C}$  and outside surface is  $4 \text{ }^\circ\text{C}$ . The thermal conductivity of glass is  $1.1 \text{ Wm}^{-1}\text{K}^{-1}$

**COURSE OUTCOME 3:** Understand the characteristics of Music and Noise, Noise pollution and its control using the basic concepts of acoustics and know the principle and properties of ultrasonics using different testing methods. (Understand)

1. With the help of a neat sketch the construction and production of ultrasonic waves using piezoelectric oscillator.
2. Explain the process of non-destructive testing of materials using ultrasonic waves by pulse echo overlap method.
3. Exemplify the increase in the acoustic intensity level when the sound intensity is doubled

**COURSE OUTCOME 4:** Demonstrate an understanding of several key areas of crystal physics (Understand)

1. Estimate the atomic packing factor for SC, BCC & FCC structures.
2. Classify the types of the defects present in the crystal.

**COURSE OUTCOME 5:** Identify different types of material processing techniques for advanced materials. (Understand)

1. Explain the preparation, types, properties and application of metallic glasses.
2. Describe the properties and applications of shape memory alloys.
3. Discuss briefly about the working of pulsed laser method used for nanoparticle deposition

21CY1401	ENGINEERING CHEMISTRY	L	T	P	C
		3	0	0	3
<b>Prerequisites for the course</b>					
<ul style="list-style-type: none"> <li>Basic theoretical concepts of Chemistry in higher secondary level.</li> </ul>					
<b>Preamble</b> To enable the students to acquire knowledge in the concepts of chemistry for engineering applications and to familiarize the students with different application-oriented topics like electrochemistry, corrosion prevention methods, significance of alloys, benefits of renewable energy sources, engineering materials, desalination etc., which enable them to develop abilities and skills that are relevant to the study and practice of engineering chemistry.					
<b>Objectives</b>					
<ol style="list-style-type: none"> <li>To equip the students in conversant with boiler feed water requirements, related problems and water treatment techniques.</li> <li>To make the students familiar with the principles of electrochemistry and corrosion.</li> <li>To develop an understanding of the basic concepts of phase rule and its applications to single and two component systems and appreciate the purpose and significance of alloys.</li> <li>To have a thorough understanding on the principles and generation of energy in batteries, nuclear reactors, solar cells, wind mills and fuel cells.</li> <li>To make the students learn the basics of polymer chemistry and mechanism of lubrication.</li> </ol>					
<b>UNIT I</b>	<b>WATER AND ITS TREATMENT</b>	<b>9</b>			
Hardness of water – types – expression of hardness – units – estimation of hardness of water by EDTA – numerical problems – boiler troubles (scale and sludge) – treatment of boiler feed water – Internal treatment (phosphate and calgon conditioning) external treatment – Ion exchange process- desalination of brackish water - Reverse Osmosis.					
<b>UNIT II</b>	<b>ELECTROCHEMISTRY AND CORROSION</b>	<b>9</b>			
Electrodes- types, Cells- types, Construction (Daniel cell) - Electrode potential- Photo electrochemical cell-working and applications – Nernst equation and its applications- Emf series & its applications. Corrosion- Causes- Types- Chemical, Electrochemical corrosion (galvanic, differential aeration), Corrosion control – Material selection and design aspects – Electrochemical protection – Sacrificial Anode cathodic Protection method.					
<b>UNIT III</b>	<b>PHASE RULE AND ALLOYS</b>	<b>9</b>			
Phase rule: Introduction, definition of terms with examples, one component system -water system - reduced phase rule - thermal analysis and cooling curves - two component systems - lead-silver system – Pattinson’s process. Alloys: Introduction- Definition- properties of alloys- significance of alloying, functions and effect of alloying elements- Nichrome and stainless steel (18/8) – heat treatment of steel.					
<b>UNIT IV</b>	<b>ENERGY SOURCES AND STORAGE DEVICES</b>	<b>9</b>			
Nuclear fission - Nuclear fusion - Differences between nuclear fission and fusion - Nuclear chain reactions - Nuclear energy - Light Water Nuclear Power Plant - Solar energy conversion - Solar cells - Wind energy. Batteries & Fuel cells: Types of batteries – Primary battery (dry cell) Secondary battery (lead acid battery) Lithium ion battery – Electric Vehicles – working principles, Fuel cells – H <sub>2</sub> -O <sub>2</sub> fuel cell and microbial fuel cell; Supercapacitors: Storage principle, types and examples.					
<b>UNIT V</b>	<b>ENGINEERING MATERIALS</b>	<b>9</b>			
Polymers: Classification of Polymers – Preparation, properties and uses of Teflon and Nylon 6,6- Benefits and Applications. Composites: Introduction: Definition & Need for composites; Properties and applications of Polymer matrix composites and hybrid composites. Nanomaterials: Types of nanomaterials; properties and uses of nanoparticle, nanocluster, nano rod, nanowire and nanotube. Preparation of nanomaterials: sol-gel, chemical vapour deposition and electrochemical deposition methods. Applications of nanomaterials in medicine, agriculture, energy and electronics.					
<b>Total Periods</b>					<b>45</b>

**Suggestive Assessment Methods**

Continuous Assessment Test (20 Marks)	Formative Assessment Test (20 Marks)	End Semester Exams (60 Marks)
Descriptive Type CAT 1 10 Marks CAT 2 10 Marks	1. Assignment 2. MCQs	1.Descriptive Type Questions

**Outcomes**

**Upon completion of the course, the students will be able to:**

CO.1: Infer the quality of water parameters from quality parameter data and propose suitable methodologies to treat water. (Remember).

CO2: Identify and apply the basic principles of electrochemistry and corrosion C103.3:

CO3: Identify suitable alloys for material analysis.

CO4: Identify different forms of energy resources and apply them in suitable energy sectors. C103.5:

CO5: Recognize and apply basic knowledge on polymers and nanomaterials to futuristic materials fabrication needs

## COURSE LEVEL ASSESSMENT QUESTIONS

**COURSE OUTCOME 1:** Students will be able to infer the quality of water parameters from quality parameter data and propose suitable methodologies to treat water. **(Understand)**

1. How is the exhausted resin regenerated in an ion exchanger?
2. Suggest your valuable ideas to protect the boiler from corrosion.

**COURSE OUTCOME 2:** Students will be able to identify and apply the basic principles of electrochemistry, corrosion and corrosion control. **(Apply)**

1. Compare the mechanisms involved in electrochemical cells and electrolytic cells.
2. How corrosion is prevented by sacrificial anode cathodic protection methods.

**COURSE OUTCOME 3:** Students will be able to apply the knowledge of phase rule and alloys for material analysis. **(Apply)**

1. Illustrate phase, component and degree of freedom with example
2. Will stainless steel rust? Justify.

**COURSE OUTCOME 4:** Students will be able to recognise different forms of energy resources and apply them in suitable energy sectors. **(Apply)**

1. Is it safe to utilize wind energy for domestic purposes? How are commercial wind farms developed and how can I get a wind farm on my property?
2. Critically analyze nuclear power technology in terms of environmental and health safety. Draw a general layout of the Light water nuclear reactor and explain its components.

**COURSE OUTCOME 5:** Students will be able to identify and apply basic concepts of polymer science, composites and nanotechnology in designing the synthesis of materials for engineering and technology applications. **(Apply)**

1. What do you feel the repercussions are for extended life through utilization of nanotechnology?
2. Give an account of the preparation properties and uses of Teflon and nylon 6,6.

21CS1514	<b>C Programming (Common for MECH &amp; CIVIL)</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
		2	0	2	3

### Preamble

This course is intended for the students to learn the basic concepts of C programming to enhance the programming knowledge of students. C programming provides the basis for many new programming languages. The lab experiments will provide practical exposure because C programming is the basic language of choice for hardware interfaces, real time robotic control and to develop and test prototypes in the field of engineering.

### Prerequisites for the course

- NIL

### Objectives

1. To develop a basic programs using conditional statements.
2. To develop the problem solving ability in using iterations and arrays
3. To solve the complex problems using strings, functions and pointers.
4. To develop programs for storing different data using structures and union
5. To learn the concept of files and to perform read and write operations

<b>UNIT I</b>	<b>BASICS OF C &amp; CONDITIONAL STATEMENTS</b>	<b>6</b>
---------------	---	----------

Structure of a C program – Compiling and executing C programs - Character Sets in C- Keywords- Identifiers- **Tokens:** Constants, Variables – Data types- Operators and Expressions – Managing Input and Output Operations – **Branching statements:** if – if else – nested if - else if ladder – switch case- break, continue, go-to statement.

### SUGGESTED ACTIVITIES

- Demonstrate the use of data types and operators

### SUGGESTED EVALUATION METHODS

- Quiz on the basics of C programming
- Write programs using types of branching statements

<b>UNIT II</b>	<b>LOOPS AND ARRAYS</b>	<b>6</b>
----------------	-------------------------	----------

**Looping statements:** Entry controlled loops – for loop - while loop– exit controlled loops – do while loop-Nested loops - **Arrays:** Declaration- Initialization- One Dimensional Array- Two Dimensional Array and Multidimensional Arrays.

### SUGGESTED ACTIVITIES

- Demonstrate the types of looping statements
- Demonstrate the types of arrays

### SUGGESTED EVALUATION METHODS

- Quiz on the basics of loops and arrays
- Write programs using loops in one, two and multidimensional arrays

### UNIT III

### STRINGS, FUNCTIONS AND POINTERS

6

**Strings:** Declaration, Initialization - String Operations – **Functions:** Declaration, Definition, Function Call – Call by Value, Call by Reference - Parameter passing methods, Recursion **Pointers:** Declaration- Definition- Pointers and Functions – Dynamic Memory Allocation.

### SUGGESTED ACTIVITIES

- Discussion on functions about Call by Value, Call by Reference and recursion examples
- Demonstrate the use of strings and dynamic memory allocation using pointers

### SUGGESTED EVALUATION METHODS

- Quiz on the basics of strings, functions and pointers
- Write programs using functions by incorporating strings and pointers in functions

### UNIT IV

### STRUCTURES AND UNION

6

**Structure:** Definition – need – general form - Nested structures – Pointer and Structures – Array of structures– Self-referential Structures - **Unions:** Definition – need – general form –Programs using structures and unions.

### SUGGESTED ACTIVITIES

- Discussion on nested structures and self-referential structures using examples
- Demonstrate the difference between structures and unions

### SUGGESTED EVALUATION METHODS

- Quiz on the basics of structures and unions
- Write programs using pointers in structures and unions

### UNIT V

### FILE PROCESSING

6

Introduction to files – **Types of files:** Text, Binary – File Operations – Functions – **Types of File Processing:** Sequential access, Random access – Sequential access files – Random access files.

### SUGGESTED ACTIVITIES

- Discussion on the need for file processing and access
- Demonstrate the difference between sequential access files and random access files

### SUGGESTED EVALUATION METHODS

- Quiz on the basics of files
- Write programs using modes of file operations

**Total Periods**

**30 Theory +30 Lab**

## Laboratory Requirements

- 60 Systems with windows / LINUX operating system with C Software or equivalent.

## Suggestive Assessment

Continuous Assessment Test (30 Marks)	Lab Components Assessments (20 Marks)	End Semester Exams (50 Marks)
1. DESCRIPTIVE QUESTIONS 2. PROGRAMMING QUESTIONS	1. LAB EXPERIMENTS 2. MODEL EXAMINATION	

## Outcomes

**Upon completion of the course, the students will be able to:**

**CO1:** To develop the basic problem solving logics using conditional statements.

**CO2:** To demonstrate the use of iterations and to apply the basic concepts of arrays.

**CO3:** To make use of the strings, functions and pointers to solve the complex problems.

**CO4:** To implement the structure and union concepts with pointers.

**CO5:** To handle the files and to access the data from the files to implement real time projects.

## Text Books

1. ReemaThareja, "Programming in C", Oxford University Press, Second edition, 2016

## Reference Books

1. Byron Gottfried "Programming With C" Fourth Edition, McGrawHill, 2018.

4. <https://w>
5. <https://w>
6. <https://w>
7. <https://w>

## List of experiments

S.NO	NAME OF EXPERIMENTS	CO
1	Programs using simple statements a) Write a program to calculate the slope of a line. b) Write a program to convert polar coordinates to Cartesian coordinates	CO1

2	<p>Programs using decision making statements</p> <p>a) Design a calculator to perform the arithmetic operations.</p> <p>b) A weather forecasting agency would like to intimate the people about the current temperature with the properclimatic message. Develop a C program to read temperature in centigrade and display a suitable message according to temperature state below :</p> <p style="padding-left: 40px;">Temp &lt; 0 then Freezing weather Temp 0-10 then Very Cold weather Temp 10-20 then Cold weather Temp 20-30 then Normal in Temp Temp 30-40 then Its Hot Temp &gt;=40 then Its Very Hot</p>	C01
3	<p>Programs using looping statements</p> <p>a) A supermarket manager wishes to keep some toys and puzzle games to enable the customers to manage theirkids during the purchase time. He kept a machine called “Fortune Teller machine”, it replies the kid with some fortune message if he enters the palindrome number. It replies with “try again later” if the kid failed to input a valid palindrome number. Write a C program to help the manager to run the “Fortune Teller Machine” perfectly.</p> <p>b) Write a C program to find the factorial of a number using all types of loops</p>	C02
4	<p>Programs using one dimensional and two dimensional arrays</p> <p>a) Given below is the list of marks obtained by a class of 20students in an annual examination.</p> <p style="padding-left: 40px;">43 65 7 24 87 90 19 39 58 75 67 87 90 92 14 78 82 99 56 89</p> <p>Write a program to count the number of students belonging to each of following groups of marks: 0- 9,10-19,upto... ,100.</p> <p>b) Write a C program to input a set of integer numbers, count and sum the positive numbers and the negative numbers then print the count and sum of all positive numbers and negative numbers.</p>	C02
5	<p>Programs using string operations</p> <p>a) Write a C program to find if the given string is palindrome or not</p> <p>b) Write a C program to reverse the given string</p>	C03
6	<p>Programs using user defined functions and recursive functions</p> <p>a) From a given paragraph perform the following using built-infunctions:</p> <ol style="list-style-type: none"> <li>1. Find the total number of words.</li> <li>2. Capitalize the first word of each sentence.</li> <li>3. Replace a given word with another word.</li> </ol> <p>b) Sort the list of numbers using pass by reference.</p>	C03
7	<p>Programs using functions and pointers</p> <p>a) Write a program in C to store n elements in an array and print the elements using pointer.</p> <p>b) Write a program in C to find the factorial of a given number using pointers</p>	C03
8	<p>Programs using structures and pointers</p> <p>a) Write a C program to calculate the salary of employees in an organization using the concept of structures with and without the usage of pointers</p>	C04

9	Programs using structures and unions a) Write a C program to display the memory allocation of multiple data types using structure and union	CO4
10	Programs using file concepts a) Write a program to create a file and store 20 names in it. Write a program to read the names in the file. b) Write a program to add five new names in the existing list by appending the names in the existing file.	CO5

ANALYZE					
EVALUATE					
CREATE					

**COURSE LEVEL ASSESSMENT QUESTIONS****COURSE OUTCOME 1:**

- Write a program to round off an integer 'i' to the next largest multiple of another integer 'j'.  
Example: 256 days when rounded off next largest multiple divisible by a week resulted into 259.
- Suppose a, b and c are integer variables that have been assigned the values a=8, b=3, and c=-5. Determine the value of each of the following arithmetic expressions in C program.
  - a+b+c
  - 2\*b+3\*(a-c)
  - a/b
  - a%b

(v) a\*(b/c)

**COURSE OUTCOME 2:**

1. Write a C program to reverse a number using while, do while and for loop
2. Write a C program to get the two matrices as a run time input and perform addition and operation and display the resultant matrix as the output. Let the Matrix A =  $\begin{bmatrix} 2 & 4 \\ 3 & 1 \end{bmatrix}$

$$\text{Matrix B} = \begin{bmatrix} 3 & 2 \\ 1 & 4 \end{bmatrix}$$

**COURSE OUTCOME 3:**

1. Write a C program to sort an array of numbers using function pointers.
2. Write a C program to find factorial of a number using call by value and call by reference methods

**COURSE OUTCOME 4:**

1. Write a C program to store employee information and search a particular employee using employee number.
2. Write a C program to get a student data with name, id and percentage and display it using pointers.

**COURSE OUTCOME 5:**

1. Write a C program to read from the num.dat file and find the average of the numbers using random access.
2. Write a C program to simulate and maintain the bank's account information such as authentication and authorization of inserted card, and performing the functions of cash withdrawal, cash deposit, and account's balance enquiry. Implement the scenario using random access file.

21HS1101	ENGLISH FOR PROFESSIONAL COMMUNICATION	L	T	P	C
		2	0	2	3
<b>Preamble</b> This course is offered to equip students with the necessary skills to listen, read, write, and speak so as to comprehend and successfully convey any idea, technical or otherwise, as well as give them the necessary polish to become persuasive communicators.					
<b>Prerequisites for the course</b> The prerequisite knowledge required to study this Course is the basic knowledge in English Language.					
<b>Objectives</b> <ol style="list-style-type: none"> <li>To develop listening skills, and enhance the ability of comprehending.</li> <li>To communicate confidently in varied real life situations.</li> <li>To widen the basic reading skills of the first year Engineering and Technology students.</li> <li>To master vocabulary, sentence structure and to write articles.</li> <li>To create emotional awareness.</li> </ol>					
<b>Module I</b>	<b>SHARING BASIC INFORMATION</b>	<b>12</b>			
Listening - Listening to basic technical concepts, short formal and informal conversations; Speaking- Formal Self-Introduction – Etiquette – Phrases to be used highlighting the characteristics, strengths and weaknesses - Conversation Practice; Reading - short comprehension passages on fundamental concepts, principles, and ideas that helps to understand the need of Technology in a rapidly changing global environment; Writing - restructuring sentences from the jumbled words – creating coherence; Language development - Framing Yes/No questions, Question tag, Vocabulary development - formation of words- verb – Noun – Adjectives, Standard Abbreviations related to Engineering.					
<b>Suggested Activities</b> i) Listening to Conversations/ technical concepts from suggested app/prescribed modules - Submission of 5 Recorded Conversations.  ii) Introducing oneself to the audience in a professional way - Video Recording to be submitted.  iii) Reading 3 Passages on Technology and answering questions through Google forms.  iv) Rearranging Jumbled words - Exercises  v) Teaching of Grammar Contents			<b>Evaluation Method</b> i) Listening & Speaking: Submitted Conversation will be assessed for a) Language style as that of the sample audio. b) Pronunciation c) Intonation  ii) Introduction: Submitted Video Recording will be assessed for a) Communication Etiquette b) Language Style c) Sentence Construction  Activities iii to v will be assessed through Google form tests/ written tests.		
<b>Module II</b>	<b>SHARING TECHNICAL INFORMATION</b>	<b>12</b>			

Listening - Listening to technical lectures by native speakers; Speaking - introducing a device/gadget to the audience - giving importance to its specifications, descriptions, merits and demerits; Reading - extensive reading - short narratives and news items from newspapers related to technology; Writing - sentence structure - short passages / reviews on any gadget - describing an electronic/ mechanical gadget, importance of punctuation, organizing paragraphs; Language development - framing 'Wh' Questions, writing a complete sentence using the fragments given; Vocabulary development- prefix and suffix.

#### Suggested Activities

i) Listening to Technical Lectures -

Suggested Youtube channels

- a) Learn Engineering
- b) Jared Owen
- c) Interesting Engineering
- d) Practical Engineering

ii) Speaking / Submitting video recording / classroom presentation about an electronic/electrical/ a mechanical gadget giving importance to its specifications, descriptions, merits and demerits.

iii) Reading articles from Newspaper/ Google News / Times Now / and other Tech News Sites

iv) Writing reviews of a product

v) Teaching of Grammar Contents

#### Evaluation Method

i) Listening skills will be tested through

- a) MCQs - Google Forms - 3 Sets
- b) Quiz - Polling - 2 set

ii)Speaking: Submitted Video

Recording/Presentation during class hours will be assessed for

- a) Language Style & Fluency
- b) Creation of Google Slides / Canva Slides
- c) Content delivery

Activities iii to v will be assessed through Google form tests/ written tests.

### **Module III | UNDERSTANDING TECHNOLOGY**

**12**

Listening - listening to technical talks on emerging trends and filling in the blanks - cloze test; Speaking - asking for opinions about technical gadgets - presentation of reviews on electronic/electrical/mechanical/software products; Reading - Reading Comprehension - technical passages - Articles from journals; Writing - rearranging jumbled sentences, writing short essays; Language development - Direct Speech and Indirect Speech - Framing Indirect - Questions - Prepositions - Articles; Vocabulary development - Select Single Word Substitutes used in Engineering.

#### Suggested Activities

i) Listening to Technical talks on emerging trends - Suggested YouTube channels

- a) Bernard Marr
- b) Concerning Reality
- c) Ideas and Inspiration

ii) Speaking / Submitting video recording / classroom presentation on giving reviews about a product.

#### Evaluation Method

i) Listening skills will be tested through

- a) Cloze Test - 2 Sets

ii)Speaking: Submitted Video

Recording/Classroom presentation will be

<p>iii) Reading articles -Extracts from reputed journals.</p> <p>iv) Writing essays and rearranging Jumbled Sentences.</p> <p>v) Teaching of Grammar Contents</p>	<p>assessed for</p> <p>a) Inquisitiveness b) Analytical skills c) Presentation Skills</p> <p>Activities iii to v will be assessed through Google form tests/ written tests.</p>	
<b>Module IV</b>	<b>STATING PROBLEMS AND EXPRESSING SOLUTIONS</b>	<b>12</b>
<p>Listening- listening to talks relating to technology and noting down the merits and demerits; Speaking - stating a problem and expressing solutions giving more focus on pronunciation of words and sentence structure; Reading - comprehending Articles from Magazines – Identify the problem statement and note down solution statements; Writing - Identifying problems – Writing problem statement, Analyzing the situation – Gathering information related to the problem stated – Identifying solution criteria – Choosing the best solution – Implementing a solution – writing solution content - Measuring solution success – Report preparation – White paper writing – Release/launch notes; Language development- Tenses; Vocabulary development- Synonyms, Antonyms, Phrasal Verbs.</p>		
<p>Suggested Activities</p> <p>i) Listening to talks related to Technology - Suggested YouTube channels</p> <p>a) Auto Car India b) Lesics c) Student Energy</p> <p>ii) Speaking / Submitting video recording / Classroom presentation on Technical issues faced in a gadget and expressing suitable solutions.</p> <p>iii) Reading articles -Extracts from reputed journals and identify problem statements and solution statements.</p> <p>iv) Writing - Identifying problems – Writing problem statement, Analyzing the situation – Gathering information related to the problem stated – Identifying solution criteria – Choosing the best solution – Implementing a solution – writing solution content - Measuring solution success – Report preparation – White paper writing – Release/launch notes</p> <p>v) Teaching of Grammar Contents</p>	<p>Evaluation Method</p> <p>i) Listening skills will be tested through</p> <p>a) Note making - 2 Sets</p> <p>ii) Speaking: Submitted Video Recording / Classroom Presentation will be assessed for</p> <p>a) Expression of Innovative Ideas and Solution b) Sentence Structure</p> <p>Activities iii to v will be assessed through Google form tests/ written tests/ written exercises.</p>	

<b>Module V</b>	<b>EMOTIONAL AWARENESS AND MANAGEMENT</b>	<b>12</b>
Listening - Listening Types - Appreciative listening – Critical Listening – Relationship Listening; Speaking - presentation on the importance of Emotional Intelligence; Reading- Reading Articles on High Level Cognition - Cognitive Control – Decision Making – Social Behaviour – Emotion – Language and Consciousness; Writing - Articulate emotions using the right language - Balance optimism and pessimism to effectively impact others; Language development - modal verbs; Vocabulary Development - Fixed and Semi-Fixed Expressions.		
Suggested Activities		Evaluation Method
i) Watching videos on types of Listening		i) Listening skills will be tested through a) Google form test- 2 Sets
ii) Presentation on Emotional Intelligence		ii) Speaking: Submitted Video Recording / Classroom Presentation will be assessed for a) Emotional awareness b) Communication Skills
iii) Reading Articles on High Level Cognition		Activities iii to v will be assessed through Google form tests/ written tests/ written exercises.
iv) Writing - Articulate emotions using the right language - Balance optimism and pessimism to effectively impact others		
v) Teaching of Grammar Contents		
<b>S.No</b>	<b>List of Exercises</b>	<b>CO</b>
1.	Conversation Recording using the suggested app	CO 1
2.	Self Introduction Video	CO 1
3.	Listening Test - Google Form	CO 2
4.	Presentation on the working principle of a gadget	CO 2
5.	Listening - Cloze Test	CO 3
6.	Reviewing a Product - Video Submission	CO 3
7.	Listening and Note Making	CO 4
8.	Talk on technical issues in a gadget and express suitable solutions.	CO 4
9.	Types of Listening - Google Form	CO 5
10.	Presentation on Emotional Intelligence	CO 5
Total Periods		30 Theory +30 Lab

Laboratory Requirements for a batch of 60 Students

Software: Globarena

1. Teacher console and 30 systems for students.
2. English Language Lab Software
3. Career Lab Software

Suggestive Assessment Methods:

- 1) Listening and answering questions - MCQ - Cloze Test - Note Making
- 2) Speaking - App/Software based testing
- 3) Reading - analyze the passage given - understand the concept and answer Questions - On-line Based
- 4) Written Tests

<b>Continuous Assessment Test (20 Marks)</b>	<b>Lab Components Assessments (30 Marks)</b>	<b>End Semester Exams (50 Marks)</b>
Written Examination	Completion of Suggested Exercises	Written Examination

### Outcomes

**Upon completion of the course, the students will be able to:**

<b>CO 1</b>	Enumerate basic information using communication etiquette on par with international communication standards. (Apply)
<b>CO 2</b>	Interpret fundamental technical concepts in English language giving importance to syntax. (Apply)
<b>CO 3</b>	Evaluate advanced varied technical concepts in the current scenario and emerging trends to invent new concepts. (Apply)
<b>CO 4</b>	Write solutions for problems identified using the exact vocabulary and structure without grammatical errors as expected by the corporate world. (Apply)
<b>CO 5</b>	Manage and respond to self, others' emotions using skills of Self Awareness, Self Management, Self-Motivation, Empathy & Social Relations to be an Emotionally Intelligent Human Being. (Apply)

**CO Vs PO Mapping and CO Vs PSO Mapping**

CO	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3
1				2				2	1	3	2	2			
2	1	1		1				1	2	3	2	2			
3	1	1		1			2	1		2	2	2			
4	1	1		1				2		2	2	2			
5						1	1	2	2	3		2			

**SUGGESTED COURSE LEVEL ASSESSMENT QUESTIONS:**

**COURSE OUTCOME 1 (CO 1) :** Enumerate basic information using communication etiquette on par with international communication standards.

- 1) Listen to the talk on basic technical topics and answer the questions provided.
- 2) Introduce yourself in a professional way highlighting Characteristics, Strengths & Weaknesses.
- 3) Read the given technical passage and answer the questions provided.
- 4) Frame Yes/No Questions for the statements given.
- 5) Frame Question tags for the statements given.
- 6) Rearrange the jumbled words into a meaningful sentence.
- 7) Complete the sentence with the Noun form/ Verb Form/ Adjective form (as Directed ) of the word given.
- 8) Give the expansion of the Abbreviations given.

**COURSE OUTCOME 2 (CO 2) :** Interpret fundamental technical concepts in English language giving importance to syntax.

- 1) Listen to the technical lecture and answer the questions provided.
- 2) Introduce a device or a gadget to the class giving importance to its specifications, description, merits and demerits.
- 3) Read the given passage / short narrative / article from a journal or newspaper to the class.

- 4) Write your review on any one of the gadgets you are using.
- 5) Frame "Wh" Questions for the statements given.
- 6) Punctuate the following statement given.
- 7) Complete the sentence using the fragments given.
- 8) Write a short passage on the given topic.
- 9) Fill in the blanks with the suitable prefix or suffix as directed.

COURSE OUTCOME 3 (CO 3) : Evaluate advanced varied technical concepts in the current scenario and emerging trends to invent new concepts.

- 1) Listen to the technical talk on the emerging trends and complete the statements given.  
(Cloze Test)
- 2) Ask questions to get an opinion about technical gadgets / software / devices
- 3) Read the given article from a journal and provide your ideas for further developments.
- 4) Rearrange the following sentences in the proper chronological order.
- 5) Write a short essay on any one of the given technical topics highlighting the future scope of the product.
- 6) Rewrite the following into Indirect Speech.
- 7) Frame indirect questions for the questions given.
- 8) Fill in the blanks with the suitable articles.
- 9) Give the one word substitutes for the given statement.

COURSE OUTCOME 4 (CO 4) : Write solutions for problems identified using the exact vocabulary and structure without grammatical errors as expected by the corporate world.

- 1) Listen to the technical talks and write down the merits and demerits of the product discussed.
- 2) Watch the video, evaluate the concept and express your solutions to the problem.
- 3) Read the given article and note down the problems stated.
- 4) Write down solutions for the problems faced while using a product.
- 5) Draft a white paper writing for the given situation..
- 6) Write launch notes for a product.
- 7) Convert the given statement to another form of the tenses as directed.
- 8) Pick out the suitable synonym for the underlined word in order to minimize plagiarism.
- 9) Fill in the blank with the suitable phrasal verb.

COURSE OUTCOME 5 (CO 5) : Manage and respond to self, others' emotions using skills of Self Awareness, Self Management, Self Motivation, Empathy & Social Relations to be an Emotionally Intelligent Human Being.

- 1) Watch the video on Types of listening and answer the questions.
- 2) Make a presentation on the importance of Emotional Intelligence.
- 3) Read the given article on High level cognition and answer the questions.
- 4) Read the article on social behaviour and redraft it in your own style.
- 5) Comprehend the passage and give your inputs for decision making.
- 6) Watch the video and articulate your emotions using appropriate words.
- 7) Write a note on optimism and pessimism.
- 8) Fill in the blank with the suitable modal verb.
- 9) Pick out the suitable fixed/ semi-fixed expression to complete the given statement.

21PY1311	PHYSICS AND CHEMISTRY LABORATORY	L	T	P	C
		0	0	4	2
<b>Preamble</b>					
The aim of this course is to make the students gain practical knowledge to co-relate with the theoretical studies and develop their practical applications in engineering materials by using the principles in the right way to implement in modern technology.					
<b>Prerequisites</b>					
Basic practical concepts of Physics and Chemistry in higher secondary level.					
<b>Objectives</b>					
<ul style="list-style-type: none"> <li>To analyze the instrumental techniques used in measuring data.</li> <li>To interrogate the competency and understanding of the basic concepts found in experimental Physics.</li> <li>To learn about the electronic mechanisms and their usage in a practical manner.</li> <li>To learn the interpretation of experimental data using the equipment in the physics laboratory.</li> <li>To investigate the errors in experimental measurements and techniques.</li> </ul>					
Objectives (Chemistry)					
<ul style="list-style-type: none"> <li>To make the students acquire practical skills in the determination of water quality parameters through volumetric and instrumental analysis.</li> <li>To develop an understanding about the range and uses of analytical methods in chemistry.</li> <li>To explain the concept of corrosion, its causes, and its environmental consequences.</li> <li>To acquaint students with knowledge of molecular weight determination and polymer solubility.</li> </ul>					
To interpret chemical and physical phenomena through experimental investigations.					
<b>PHYSICS</b>					
S.No	List of Experiments				CO
1	Determination of specific resistance of a given coil of wire – Carey Foster's Bridge.				3
2	Determination of band gap of a Semiconductor (Forbidden energy band gap kit).				1
3	Determination of planck's constant and work function using the principle of photoelectric effect				5
4	Determination of Young's modulus of the material-Non Uniform bending method.				1
5	Determination of thermal conductivity of a bad conductor – Lee's Disc method.				4
6	Determination of velocity of sound and compressibility of liquid – Ultrasonic Interferometer.				1
7	Determination of wavelength of spectral lines using grating – Spectrometer.				2
<b>CHEMISTRY</b>					
1	Determination of total, temporary & permanent hardness of water by EDTA method.				1,5
2	Corrosion experiments – weight loss method.				3,5
3	Estimation of iron content of the given solution using potentiometer.				2
4	Conductometric titration of strong acid vs strong base.				2
5	Determination of molecular weight of polyvinyl alcohol using Ostwald viscometer.				4
6	Estimation of HCl using Na <sub>2</sub> CO <sub>3</sub> as primary standard and determination of alkalinity in water sample.				1,5

7	Determination of strength of given hydrochloric acid using pH meter.	2
---	--	---

### List of Projects ( PHYSICS)

S. No.	List of Projects	Related Experiment	CO
1	To study Infrared radiation emitted by different sources using phototransistors.	3	5
2	To study the variations, in current flowing in a circuit containing a LDR, because of a variation: (a) In the power of the incandescent lamp, used to 'illuminate' the LDR. (Keeping all the lamps at a fixed distance). (b) In the distance of an incandescent lamp, (of fixed power), used to 'illuminate' the LDR.	2	1
3	Design a circuit for cool automatic timer controlled Light which controls vehicle traffic passing through the intersection of two or more roadways by giving a visual indication to drivers when to proceed, when to slow , and when to stop using LED and 4017 counter IC along with the 555 timer.	2	1
4	Design and implement a circuit which anyone can make at home to save their home from thefts using the light has high intensity, monochromatic, directional and coherent in nature.	7	2
5	Construct a household circuit consisting of three bulbs using a dual switching method.	1	3
6	Using ultrasonic sensor, design a ultrasonic distance finder using 8051	6	1
7	Design a water level indicator by connecting a Buzzer, resistor and transistor in series and connect this in parallel to LED.	2	1

### List of Projects (CHEMISTRY)

1	Water Analysis : Analysis of perennial Thamirabarani River water samples collected from various locations (before and after blending of industrial waste water). i) Determination of various physical and chemical parameters ( Hardness, pH,TDS, Alkalinity) of different water samples. ii) From the result, give a detailed report about the water sample whether it is fit/unfit for domestic and industrial purposes.	1, 6,7	1,5
2.	Water Quality Monitoring : Analysis of ground water samples collected from various districts ( Tirunelveli, Madurai, Tuticorin, Kanyakumari, Tenkasi etc.,). i) Determination of various physical and chemical parameters (Hardness, pH, TDS, Alkalinity) of different water samples. ii) From the result, give a detailed report about the water sample whether it is fit/unfit for domestic and industrial purposes.	1,6,7	1,5
3.	Household Plumbing Deterioration Monitoring : Study		

	of Conductivity of domestic water (Home) by Arduino method to track the deterioration of household plumbing. i) From the observations give a detailed report about the existence of various ions in water. ii) Give an explanatory report on tracking the deterioration in household plumbing.	2	3,5
4	Air quality monitoring : Study of air pollution in Nellai smart city in the early morning, noon and evening due to CO/CO <sub>2</sub> emissions by Arduino method. i) From the observations give a detailed report about the impact of air pollution on human health. ii) Deduce an explanatory report on environmental impact due to CO/CO <sub>2</sub> emissions.	4	5
5.	Food adulteration : Investigation of adulterants in various food stuffs (milk, chilli powder, turmeric powder, wheat flour, honey and ghee) by Chemical methods. i) Give a report on the presence of adulterants in the given food samples. ii) From the observations give a brief report about the impact of food adulteration on human health.	1	5

### Lab Assessment

**Lab Components Assessments  
(50 Marks)**

**End Semester Exams  
(50 Marks)**

### Outcomes( Physics)

**Upon completion of the course, the students will be able to:**

<b>C01</b>	Analyzation of new instruments and real time application in engineering materials. (Analyse)
<b>C02</b>	Applying the basic concepts of physics in the experiments by interrogating the data.(Apply)
<b>C03</b>	Applying basic knowledge to design circuits using basic components. (Apply)
<b>C04</b>	Acquire the basic enlightenment of the experimental data for interpretation (Apply)
<b>C05</b>	Solve problems individually using critical thinking collaboratively. (Analyse)

### Outcomes(Chemistry)

<b>C01</b>	Analyze the water quality related parameters quantitatively. (Analyse)
<b>C02</b>	Explain the use of equipment for the measurement of conductance, electrode potential, pH of solutions, and viscosity. (Apply)
<b>C03</b>	Analyze the probable corrosion, corrosion rate, and corrosion mechanism of the metallic material in the given environment (Analyse)
<b>C04</b>	Analyze polymerization data and predict the conversion and molecular weight, which will lead to critical thinking about how to improve the setup for better polymerization.(Analyse)
<b>C05</b>	Apply the knowledge of practical to enhance the quality of the environment .(Apply)

**COURSE LEVEL ASSESSMENT QUESTIONS - PHYSICS**

**COURSE OUTCOME 1:** The students will be able to analyzation of new instruments and real time application in engineering materials. (Analyse)

1. Determination of band gap of a Semiconductor (Forbidden energy band gap kit).
2. Determination of velocity of sound and compressibility of liquid – Ultrasonic Interferometer.

**COURSE OUTCOME 2:** The students will be able to apply the basic concepts of physics in the experiments by interrogating the data.(Apply)

1. Determination of wavelength of spectral lines using grating – Spectrometer.

**COURSE OUTCOME 3:** The students will be able to apply basic knowledge to design circuits using basic components. (Apply)

1. Design a circuit for finding unknown resistance and specific resistance of a given coil of wire.

**COURSE OUTCOME 4:** The students will be able to acquire the basic enlightenment of the experimental data for interpretation (Apply)

1. Determine the thermal conductivity of a given bad conductor (Glass) using Lee’s disc method. (Given:  $M = 800 \times 10^{-3} \text{ Kg}$ ,  $S = 370 \text{ JKg}^{-1}\text{K}^{-1}$ ).

**COURSE OUTCOME 5:** The students will be able to solve problems individually using critical thinking collaboratively. (Analyse)

1. Determination of planck's constant and work function using the principle of photoelectric effect
2. Find the Young’s modulus of the material of a beam using Non-Uniform bending method. (Given : Thickness of the beam  $d = 6.35 \text{ mm}$ )

# **SEMESTER II**

21HS2101	ENGLISH FOR TECHNICAL COMMUNICATION	L	T	P	C
		2	0	0	2
<p><b>Preamble</b> This course is offered to develop strategies and skills to enhance professional students' ability to read and comprehend engineering and technology texts. Foster their ability to write convincing job applications and effective reports. Develop their speaking skills to make technical presentations, participate in group discussions. The outcome of the course is to help students acquire the language skills of listening, speaking, reading and writing competency in English language thereby making them meet the global expectations.</p>					
<p><b>Prerequisites for the course</b></p> <ul style="list-style-type: none"> <li>The prerequisite knowledge required to study this Course is the basic knowledge in English Language.</li> </ul>					
<p><b>Objectives</b></p> <ol style="list-style-type: none"> <li>To widen strategies and skills to augment ability to read and comprehend engineering and technology texts.</li> <li>To draft convincing job applications and effective reports.</li> <li>To develop speaking skills to make technical presentations, participate in group discussions.</li> <li>To strengthen listening skills to comprehend technical lectures and talks in their areas of specialization.</li> <li>To cultivate writing skills both technical and general.</li> </ol>					
<b>MODULE 1</b>	<b>READING AND STUDY SKILLS</b>	<b>6</b>			
<p>Reading - Reading longer technical texts / technical blogs and taking down notes; Writing - interpreting charts (all the types), graphs – comparing and contrasting statements/paragraphs – analyzing technical details - writing technical blogs; Vocabulary Development - Select Technical Vocabulary; Language Development - Active Voice and Passive Voice</p>					
<p>Suggested Activities</p> <p>i) Visit to the Library - Reading articles on emerging trends and taking down notes in the prescribed format - Submission through FAST FORMS - Minimum 2</p> <p>ii) Writing compare and contrast statements. (Eg. Windows 10 Vs Windows 1, RPA Developer Vs RPA Analyst, Edge Computing Vs Quantum Computing) related to the programme.</p> <p>iii) Teaching of Grammar Contents</p>		<p>Evaluation Method</p> <p>i) Content &amp; Structure</p> <p>ii) Submission: Fast form Document Submitted document will be assessed for</p> <ol style="list-style-type: none"> <li>Communication Etiquette</li> <li>Language Style</li> <li>Sentence Construction</li> </ol> <p>Activity iii will be assessed through Google form tests/ written tests.</p>			

<b>MODULE 2</b>	<b>INTRODUCTION TO PROFESSIONAL WRITING</b>	<b>6</b>
Reading - Technical related topics; Writing - statement of purpose - press release – extended definitions - writing instructions – checklists – recommendations – Minutes of the Meeting ; Language Development - Subject Verb Agreement, Compound Words.		
<p>Suggested Activities</p> <p>i) Visit to the Library - Reading articles on emerging trends and writing down purpose statements and extended definitions. Submission through FAST FORMS - Minimum 2</p> <p>ii) Writing a set of 8 Instructions, Recommendations and Checklists for the suggested topics. (each 2 sets)</p> <p>iii) Teaching of Grammar Contents</p>	<p>Evaluation Method</p> <p>i) Content &amp; Structure</p> <p>ii) Submission: Fast form Document Submitted document will be assessed for</p> <p>a) Format b) Language Style c) Sentence Construction</p> <p>Activity iii will be assessed through Google form tests/ written tests.</p>	
<b>MODULE 3</b>	<b>INTERVIEW SKILLS</b>	<b>6</b>
Listening - Listening to mock Interviews ; Speaking - answering Interview questions – GD Strategies; Reading- newspaper article - read company profile - practice in speed reading ; Writing - Job Application - Resume- Internship application - letter to the editor - email etiquette - positive, negative and neutral responses - sending professional emails; Writing opinion paragraph - Writing paragraphs with reasons; Vocabulary Development - select Technical Vocabulary Language Development - If – Conditionals		
<p>Suggested Activities</p> <p>i) Listening to UPSC Toppers Mock Interviews.</p> <p>ii) Drafting Job application and Resume building.</p> <p>iii) Teaching of Grammar Contents</p>	<p>Evaluation Method</p> <p>i) Answering questions for Interview questions(Android app based) Responses will be assessed for</p> <p>a) Fluency b) Communication etiquette c) Language style</p> <p>ii) Submission: Fast form Document Submitted document will be assessed for</p> <p>a) Language Style b) Design</p> <p>Activity iii will be assessed through Google form tests/ written tests.</p>	
<b>MODULE 4</b>	<b>REPORT WRITING I</b>	<b>6</b>
Writing - Fire accident Report, Industrial Visit Report, Project Report; Vocabulary Development- finding suitable synonyms - paraphrasing ; Language Development - Clauses.		

Suggested Activities i) Drafting reviews and reports on Industries - a) Profile & Products b) Trending technology adopted		Evaluation Method i) Content & Structure	
c) Careers d) Latest news Min - 2 Industries			
ii) Teaching of Grammar Contents		Activity ii will be assessed through Google form tests/ written tests.	
MODULE 5	REPORT WRITING II		<b>6</b>
Writing - Writing Feasibility Reports, Survey Reports, Business Report; Vocabulary Development - verbal analogies ; Language Development - advanced use of Articles, Prepositional Phrases.			
Suggested Activities i) Drafting feasibility report on- a) Launching a new product / Technology Min - 2		Evaluation Method i) Content & Structure	
ii) Teaching of Grammar Contents		Activity ii will be assessed through Google form tests/ written tests.	
<b>Total Periods</b>			<b>30</b>
<b>Suggestive Assessment Methods</b>			
<b>Continuous Assessment Test (30 Marks)</b>	<b>Formative Assessment Test (10 Marks)</b>	<b>End Semester Exams (60 Marks)</b>	
(i) Google Form based - on-line Test (i) (ii) Written Test	(i) Google Form based - on-line Test incorporating Listening, Speaking and Reading	Written Test	
<b>Outcomes</b>			
Upon completion of the course, the students will be able to:			
<b>C01</b>	Understand advanced technical texts from varied technical genres to understand engineering concepts and explore more. (Apply)		
<b>C02</b>	Review technical contents written on par with international standards and rewrite contents using the right vocabulary without grammatical errors to make their articles published in reputed journals. (Apply)		
<b>C03</b>	Articulate appropriately in interviews and Group Discussions effortlessly following the strategies expected by the corporate world. (Apply)		
<b>C04</b>	Write reports utilizing the required format prescribed on par with international standards using the exact vocabulary to make their reports worthy to be read. (Apply)		
<b>C05</b>	Appraise the need for new products and write feasibility and survey reports following the format prescribed in a way to create awareness. (Apply)

### **SUGGESTED COURSE LEVEL ASSESSMENT QUESTIONS:**

**COURSE OUTCOME 1 (CO 1) :** Understand advanced technical texts from varied technical genres to understand engineering concepts and explore more.

- 1) Read the given passage and take notes.
- 2) Analyse the given type of chart or graph and answer the questions given.
- 3) Analyse the given chart or graph and write paragraphs comparing and contrasting the data.
- 4) Analyse the given chart or graph and write paragraphs giving importance to technical details.
- 5) Fill in the blank with appropriate technical vocabulary.
- 6) Convert the given active voice sentence into passive voice or impersonal passive voice.

**COURSE OUTCOME 2 (CO 2) :** Review technical contents written on par with international standards and rewrite contents using the right vocabulary without grammatical errors to make their articles published in reputed journals.

- 1) Write a purpose statement for the tool or gadget given.
- 2) Write an extended definition for the given word.
- 3) Write 8 instructions / recommendations on the given topic.
- 4) Write the Minutes of the meeting for the given meeting.
- 5) Fill in the blank with appropriate Subject Verb agreement.
- 6) Fill in the blank with suitable compound words.

**COURSE OUTCOME 3 (CO 3) :** Articulate appropriately in Interviews and Group Discussions effortlessly following the strategies expected by the corporate world.

- 1) Listening to mock interviews and answering the questions.
- 2) Listen to the strategies of GD and answer the given questions.
- 3) Read and submit a recording of technical content following the strategies of speed reading.
- 4) Write Job application with a cover letter for the given job description.
- 5) Write paragraphs expressing opinion on the given topic.
- 6) Fill in the blank / complete the sentence with appropriate If-Conditionals.

**COURSE OUTCOME 4 (CO 4) :** Write reports utilizing the required format prescribed on par with international standards using the exact vocabulary to make their reports worthy to be read.

- 1) Write a fire accident report for the provided incident.
- 2) Write an Industrial visit report.
- 3) Write a report on the Project work undertaken by the candidate giving importance to the current status report and the time needed for the completion of the project.
- 4) Find the appropriate synonym for the given word.
- 5) Paraphrase the given passage.
- 6) Fill in the blank with appropriate clauses.

**COURSE OUTCOME 5 (CO 5) :** Appraise the need for new products and write feasibility and survey reports following the format prescribed in a way to create awareness.

- 1) Write a Feasibility report for a business / project proposal given.
- 2) Write a survey report for the given scenario.
- 3) Pick out the appropriate Verbal Analogy.
- 4) Fill in the blank with appropriate articles.
- 5) Complete the sentence with appropriate Prepositional Phrases.
- 6) Choose the appropriate word to complete the sentence.

21MA2201	PARTIAL DIFFERENTIAL EQUATION AND APPLICATIONS OF FOURIER SERIES	L	T	P	C
		3	1	0	4
<b>Preamble:</b>					
The course consists of topics in Complex Integration, Partial Differential Equations and Laplace Transforms with applications to various engineering problems. This course will cover the following main topics: Construction of analytic function, Taylors and Laurent's series, Poles and Residues, Half range sine series, Harmonic analysis, Fourier Series Solutions of one dimensional wave and heat flow equation and Applications of Laplace transforms for solving linear ordinary differential equations up to second order with constant coefficients.					
<b>Prerequisites for the course</b>					
Basic knowledge of Partial differentiation and Integration.					
<b>Objectives</b>					
<ol style="list-style-type: none"> <li>1. To introduce to the concept of Analytical function</li> <li>2. To familiarize with Complex integration</li> <li>3. To introduce Fourier series analysis which is central to many applications in engineering field and its use in solving boundary value problems</li> <li>4. To acquaint the student with PDE and Fourier series techniques in solving wave and heat flow problems used in various situations.</li> <li>5. To improve the knowledge of Laplace transform.</li> </ol>					
<b>UNIT I</b>	<b>ANALYTIC FUNCTIONS</b>	<b>9+3</b>			
Definition of Analytic Function – Cauchy Riemann equations – Properties of analytic functions – Harmonic function – Harmonic Conjugate - Construction of analytic function by Milne Thomson's method and bilinear transformation.					
<b>SUGGESTED EVALUATION METHODS:</b>					
<ul style="list-style-type: none"> <li>• Tutorial Problems on Construction of analytic function by Milne Thomson's method and bilinear transformation.</li> </ul>					
<b>UNIT II</b>	<b>COMPLEX INTEGRATION</b>	<b>9+3</b>			
Complex numbers and its conjugate - Cauchy's integral theorem (without proof) – Cauchy's integral formulae and its higher order derivatives (without proof) and its applications – Taylors and Laurent's series – Types of Singularities – Poles and Residues – Cauchy's residue theorem (without proof).					
<b>SUGGESTED EVALUATION METHODS:</b>					
<ul style="list-style-type: none"> <li>• Tutorial Problems on Taylors series, Laurent's series and Cauchy's residue theorem.</li> </ul>					
<b>UNIT III</b>	<b>FOURIER SERIES</b>	<b>9+3</b>			
Dirichlet's conditions – General Fourier series – Change of Intervals - Odd and even functions – Half range sine series – Half range cosine series - Root mean square value – Harmonic analysis for Fourier series - Engineering Applications.					

**SUGGESTED EVALUATION METHODS:**

- Tutorial Problems on Fouries series of Odd and even functions, Half range sine and cosine series, Harmonic analysis.

<b>UNIT IV</b>	<b>PDE AND APPLICATIONS OF FOURIER SERIES</b>	<b>9+3</b>
Classification of PDE – Method of separation of variables - Fourier Series Solutions of one dimensional wave equation – Fourier Series Solutions of one dimensional equation of heat conduction - Engineering Applications.		
<b>SUGGESTED EVALUATION METHODS:</b>		
<ul style="list-style-type: none"> <li>• Tutorial Problems on Fourier Series Solutions of one-dimensional wave equation and heat conduction equation.</li> </ul>		
<b>UNIT V</b>	<b>LAPLACE TRANSFORMS</b>	<b>9+3</b>
Properties of Laplace Transform – Inverse transforms – Convolution theorem (Without Proof) – Partial fraction - Applications of Laplace transforms for solving linear ordinary differential equations up to second order with constant coefficients only - Engineering Applications.		
<b>SUGGESTED EVALUATION METHODS:</b>		
<ul style="list-style-type: none"> <li>• Tutorial Problems on Laplace transform using partial fraction, Convolution theorem and solving ODE.</li> </ul>		
<b>Total Periods</b>		<b>45 + 15 = 60 Periods</b>
<b>Suggestive Assessment Methods</b>		
<b>Continuous Assessment Test (20 Marks)</b>	<b>Formative Assessment Test (20 Marks)</b>	<b>End Semester Exams (60 Marks)</b>
1. Descriptive Questions CAT 1 – 10 Marks CAT 2 – 10 Marks	1. Assignment 2. Online Quizzes	1. Descriptive Questions
<b>Outcomes</b>		
<b>Upon completion of the course, the students will be able to:</b>		
<b>C108.1.</b> : Apply Cauchy-Riemann equations to problems of fluid mechanics, thermodynamics and electro-magnetic fields. ( Apply)		
<b>C108.2:</b> Solve complex valued integral functions using residues.		(Apply)
<b>C108.3:</b> Construct the Fourier series expansion of the periodic function.		(Apply)
<b>C108.4:</b> Solve the problems of one dimensional wave and heat equation.		(Apply)
<b>C108.5:</b> Apply Laplace Transform technique to solve the given ordinary differential equation. (Apply)

**CO Vs PO Mapping and CO Vs PSO Mapping:**

CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	3	2												
2	3	2												
3	3	2										2		
4	3	2										2		
5	3	2												

**COURSE LEVEL ASSESSMENT QUESTIONS****COURSE OUTCOME 1 (CO 1) : (Apply)**

1. Construct an analytic function whose imaginary part is  $v = e^x(x \cos y - y \sin y)$
2. Find the bilinear transformation that maps the points  $Z = 0, -1, i$  on to the points  $w = i, 0, \infty$ .

**COURSE OUTCOME 2 (CO 2) : (Apply)**

- 1) Solve  $\int \frac{e^{2z}}{(z+1)^4} dz$  using Cauchy's Integral formula where  $C$  is  $|z| = 2$ .
- 2) Compute  $\int \frac{2z-1}{z(z+1)(z-3)} dz$  using Cauchy's Residue theorem where  $C$  is  $|z| = 2$ .

**COURSE OUTCOME 3 (CO 3) : (Apply)**

- 1) Construct Fourier series for  $f(x) = x$  in  $(-\pi, \pi)$ .
- 2) Construct Fourier series for  $f(x) = x^2$  in  $(-l, l)$ .

**COURSE OUTCOME 4 (CO 4) : (Apply)**

- 1) Identify the PDE  $u_{xx} = a^2u_{tt}$
- 2) A tightly stretched string with fixed end points  $x = 0, x = l$  is initially at rest in its equilibrium position. If it is vibrating, giving each point a velocity  $\lambda x(l - x)$ . Find the displacement of the string at any time 't'.

**COURSE OUTCOME 5 (CO 5) : (Apply)**

- 1) Solve  $\frac{d^2x}{dt^2} - 3\frac{dx}{dt} + 2x = 2$ , given  $x = 0$  and  $\frac{dx}{dt} = 5$  for  $t = 0$  using Laplace transform method.
- 2) Find the Laplace transform for  $\frac{\cos at - \cos bt}{t}$

<b>21ME2501</b>	<b>ENGINEERING MECHANICS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
		<b>2</b>	<b>1</b>	<b>0</b>	<b>3</b>
<b>Prerequisites for the course</b>					
Engineering Physics					
<b>Objectives</b>					
To develop the capacity to predict the effects of force and motion while carrying out the creative design functions of engineering					
<b>UNIT I</b>	<b>STATICS OF PARTICLES</b>	<b>7+2</b>			
Introduction – Units and Dimensions – Laws of Mechanics – Lami’s theorem, Parallelogram and triangular Law of forces – Vectorial representation of forces – Coplanar Forces – rectangular components – Equilibrium of a particle – Forces in space – Equilibrium of a particle in space – Equivalent systems of forces – Principle of transmissibility					
<b>UNIT II</b>	<b>EQUILIBRIUM OF RIGID BODIES</b>	<b>7+2</b>			
Free body diagram – Types of supports – Action and reaction forces – stable equilibrium – Moments and Couples – Moment of a force about a point and about an axis – Vectorial representation of moments and couples – Scalar components of a moment – Varignon’s theorem – Single equivalent force – equilibrium of Rigid bodies in two dimensions					
<b>UNIT III</b>	<b>PROPERTIES OF SURFACES AND SOLIDS</b>	<b>8+2</b>			
Centroids and centre of mass – Centroids of lines and areas – Rectangular, circular, triangular areas by integration – T section, I section, – Angle section, Hollow section by using standard formula – Theorems of Pappus – Area moments of inertia of plane areas – Rectangular, circular, triangular areas by integration – T section, I section, Angle section, Hollow section by using standard formula – Parallel axis theorem and perpendicular axis theorem – Principal moments of inertia of plane areas – Principal axes of inertia-Mass moment of inertia					
<b>UNIT IV</b>	<b>DYNAMICS OF PARTICLES</b>	<b>8+2</b>			
Displacements, Velocity and acceleration, their relationship – Relative motion – Curvilinear motion – Newton’s laws of motion – Work Energy Equation – Impulse and Momentum – Impact of elastic bodies					
<b>UNIT V</b>	<b>FRICTION</b>	<b>5+2</b>			
Friction force – Laws of sliding friction – equilibrium analysis of simple systems with sliding friction – wedge friction – belt friction – ladder friction					
<b>Total Periods</b>					<b>35+10=45 hours</b>

### Suggestive Assessment Methods

Assignment, Multiple Choice  
Questions

Multiple Choice Questions

### Outcomes

**Upon completion of the course, the students will be able to:**

**C109.1:**Enumerate the basic laws of mechanics and practice the vector manipulation, equilibrium conditions on the systems of forces acting on particles.

**C109.2:**Compute reaction force and moment on the rigid bodies using both vector and scalar methods

**C109.3:**Determine the center of gravity and moment of inertia of the standard and composite section

**C109.4:**Apply equation of motion, principles of D'Alembert's work energy and impulse momentum to the problems on dynamics of particles.

**C109.5:**Describe frictional laws to compute the frictional forces for bodies in contact.

## COURSE LEVEL ASSESSMENT QUESTIONS

**COURSE OUTCOME 1: Enumerate the basic laws of mechanics and practice the vector manipulation, equilibrium conditions on the systems of forces acting on particles. (Remember, Understand, Apply, Analyse)**

1. Define coplanar and non-coplanar forces (Remember)
2. Determine the magnitude and direction of the resultant of two forces 100 N and 150 N acting at angle of  $45^\circ$  (Understand)
3. If the two tensions in the pulley cable shown in Fig. are 400 N, determine the resultant R exerted on the pulley by the two tensions. (Apply)

4. Two identical rollers each of weight 1000N are supported by an inclined plane and a vertical wall as shown in fig below. Find the support reactions at points A, B & C. assume all surfaces to be smooth (Analyse)

**COURSE OUTCOME 2: Compute reaction force and moment on the rigid bodies using both vector and scalar methods (Remember, Understand, Apply, Analyse)**

1. List some types of beams based on supports (Remember)
2. State Varignon's theorem (Understand)
3. An 800-N force is applied to a 3-m high pole at the point P, as shown in Fig. Calculate the magnitude of moment of this force about the base point O by four different methods. (Apply)

4. Calculate the support reactions for a simply supported beam with hinged support at the end A and roller support at the end B, subjected to inclined loading as shown in Fig. (Analyse)

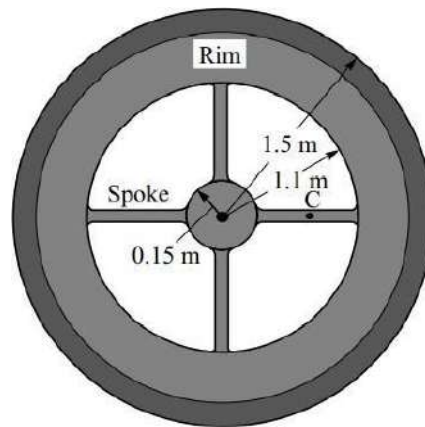

**COURSE OUTCOME 3: Determine the center of gravity and moment of inertia of the standard and composite section (Remember, Understand, Apply)**

1. Write the formula for finding moment of inertia about X and Y axis (Remember)
2. Find the centroid of the plane lamina shown in Fig. (Understand)

3. A flywheel (Fig.) consists of a rim of 2500-kg mass and four spokes each of 60-kg mass. The rim has inner and outer radii of 1.1 m and 1.5 m, respectively. The shaft at the center of the wheel has a diameter of 0.25 m and a mass of 1200 kg. Determine (a) the moment of inertia of flywheel about its axis of rotation, and (b) its radius of gyration. (Apply)

**COURSE OUTCOME 4: Adapt equation of motion, principles of D'Alembert, work energy and impulemomentum to the problems on dynamics of particles. (Understand, Remember, Apply, Analyse, Evaluate)**

1. State Newton's second law of motion (Remember)
2. State law of conservation of momentum (Understand)
3. In Asian games, for 100 m event an athlete accelerates uniformly from the start to this maximum velocity in a distance of 4 m and runs the remaining distance with that velocity. If the athlete finishes the race in 10.4 seconds, determine (i) his initial acceleration (ii) his maximum velocity (Apply)
4. Three spherical balls A, B and C of 3kg, 9kg and 18 kg masses are moving in the same direction with velocities of 12 m/s, 4 m/s and 2 m/s, respectively, as shown in Fig. If the ball A Collides with the ball B which in turn collides with the ball C, proves that the balls A and B come to rest after the impacts. Assume that all the impacts are perfectly elastic. (Analyse)

5. Direct central impact occurs between 300 N body moving to the right with the velocity of 6 m/s and 150 N body moving to the left with the velocity of 10 m/s. Find the velocity of each body after impact if the coefficient of restitution is 0.8 (Evaluate).

**COURSE OUTCOME 5: Describe frictional laws to compute the frictional forces for bodies in contact. (Understand, Remember, Apply, Analyse)**

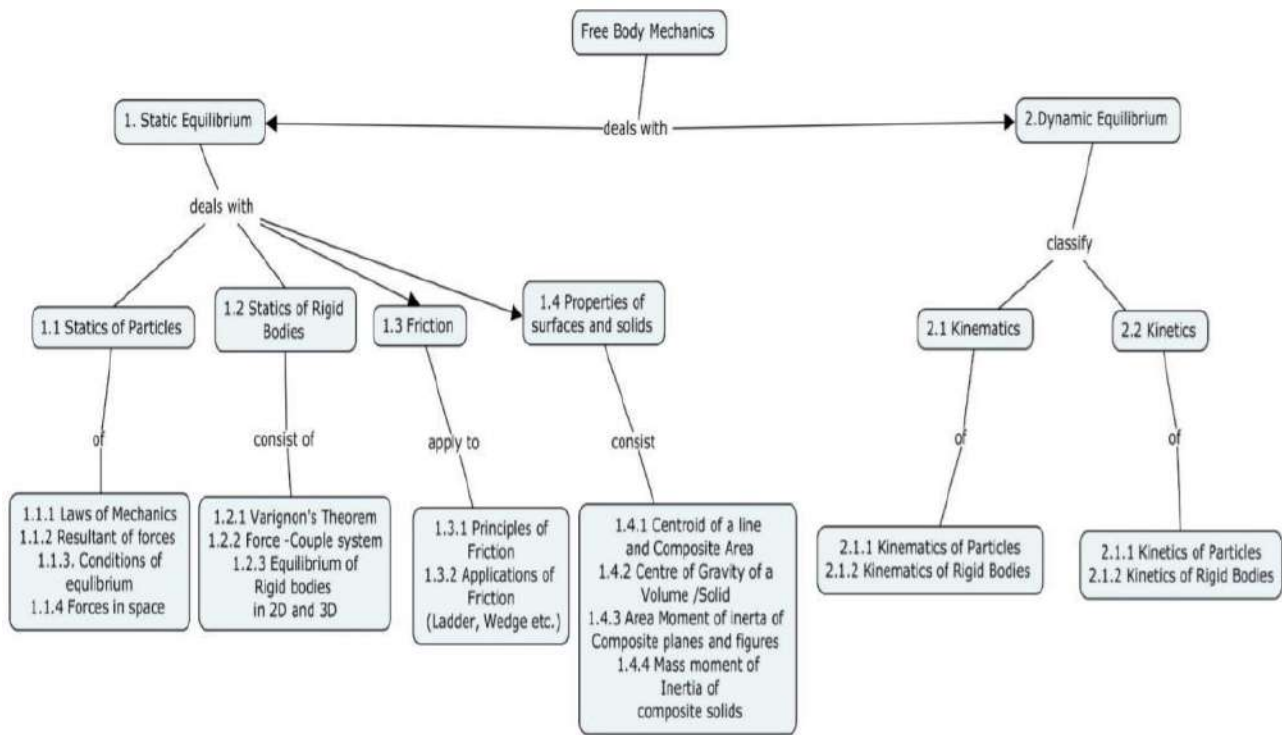

1. State the laws of dry (coulomb) friction (Remember)
2. Define angle of repose (Understand)
3. A 1500-N block overlaying a 10-degree wedge on a horizontal floor and leaning against a vertical wall, is to be raised by applying a horizontal force  $P$  as shown in Fig. Determine the force  $P$  necessary to just start the motion, if the coefficient of friction is 0.3 (Analyse)

4. A uniform ladder of 5-m length and 20-N weight is placed against a smooth vertical wall with its lower end 4 m away from the wall. If the ladder is just to slip, determine the coefficient of friction between the ladder and floor, and the frictional force acting on the ladder at the point of contact with the floor. (Apply)

### CONCEPT MAP

HoD/Mech

21ME1513	COMPUTER AIDED ENGINEERING GRAPHICS	L	T	P	C
		1	2	2	4

**Prerequisites for the course**

NIL

**Preamble**

Engineering drawing is an important tool for all Engineers and for many others professionals. It is the language of Engineers. Engineering Drawing communicates all needed information from the engineer who designed a part to the workers who will manufacture it.

**Objectives**

1. To understand the importance of the drawing in engineering applications
2. To improve their visualization skills so that they can apply this skill in developing newproducts.
3. To expose them to existing standards related to technical drawings.
4. To develop graphic skills for communication of concepts, ideas, and design of engineering products
5. Train to practice engineering graphics through drafting software.

**CONCEPTS AND CONVENTION**

Importance of graphics in engineering applications – Use of drafting instruments – BIS conventionsand specifications – Size, layout of drawing sheets – Lettering and Dimensioning

<b>UNIT I</b>	<b>PROJECTION OF POINTS, LINES AND PLANES</b>	<b>9</b>
---------------	---	----------

General Principles of orthographic projection – First Angle Projection, projection of points in four quadrants – Projection of straight lines located in the first quadrant – inclined to both planes – Projection of planes (Change of position method only)

<b>UNIT II</b>	<b>PROJECTION OF SOLIDS</b>	<b>10</b>
----------------	-----------------------------	-----------

Projection of simple solids like prisms, pyramids, cylinder, and cone when the axis is inclined to onereference plane by change of position method.

<b>UNIT III</b>	<b>SECTIONS OF SOLIDS AND DEVELOPMENT OF SURFACES</b>	<b>10</b>
-----------------	---	-----------

Sections of regular solids as per BIS conventions - Constructing sectional views of simple objects and components - Development of lateral surfaces of regular solids-Projection of truncated solids- Combinations of solids

<b>UNIT IV</b>	<b>ISOMETRIC PROJECTIONS</b>	<b>8</b>
----------------	------------------------------	----------

Principles of isometric projection – isometric scale – isometric projections of simple solids, truncatedprisms, pyramids, cylinders, and cones.

<b>UNIT V</b>	<b>PERSPECTIVE PROJECTIONS</b>	<b>8</b>
---------------	--------------------------------	----------

Perspective projection of prisms, pyramids, and cylinders by visual ray method.

S.No	List of Experiments	CO
1.	Introduction to drafting commands in AutoCAD. Creation of simple geometry and editing practice.	C112.1
2.	Projection of simple Geometric objects and engineering components using AutoCAD	C112.2
3.	Construction of simple objects and components sectional views using AutoCAD	C112.3
4.	Construction of development of surfaces of simple solids	C112.3
5.	Isometric projection of simple components-flange, cylinder, chimney, lamp shades, valve, Brackets using AutoCAD	C112.4
6.	Creating a Perspective Projection of solids using AutoCAD	C112.5
7.	Conversion of isometric projections into orthographic projection	C112.4
<b>Total Periods</b>		<b>15 Lecture +30 Tutorial+ 30 Lab Hours</b>

### Laboratory Requirements

#### SYSTEM REQUIREMENTS (For a batch of 30 Students)

#### Hardware:

1. Intel i3 core due processor with 4GB ram with 500GB hard disk – 30 Nos.
2. Laser Printer – 1 No.

#### Software:

Drafting package – AutoCAD – Adequate license (Open source)

### Suggestive Assessment Methods

CAT 1 (20Marks)	LAB COMPONENTS (30 Marks)	End Semester Exams (50 Marks)
CAT 1 10 MARKS CAT 2 10 MARKS	Model Lab with project (10 Marks) Lab Experiment (20 Marks)	50

### Outcomes

#### Upon completion of the course, the students will be able to:

C112.1: Apply the principles of first angle projection in construction of points, lines and planes  
C112.2: Apply the principles of change of position method in projection of simple solids.  
C112.3: Develop projections of sectioned solids and their developmental surface.  
C112.4: Develop isometric views from orthographic projections  
C112.5: Construct the perspective projections of simple solids

## COURSE LEVEL ASSESSMENT QUESTIONS

**COURSE OUTCOME 1:** Apply the principles of first angle projection in construction of points and lines. (Apply)

1. Draw the projections of the following points on a common reference line. (Apply)

A, 35 mm above HP and 25 mm in front of VP

B, 40 mm below HP and 15 mm behind VP

C, 50 mm above HP and 25 mm behind VP

D, 45 mm below HP and 25 mm behind VP

E, 30 mm behind VP and on HP

2. A line CD measuring 80 mm is inclined at an angle of  $30^\circ$  to HP and  $45^\circ$  to VP. The point C is 20 mm above HP and 30 mm in front of VP. Draw the projections of the straight line. (Apply)

**COURSE OUTCOME 2:** Apply the principles of change of position method in projections of solid problems and draw graphically

1. A pentagonal pyramid of base side 25 mm and height 40 mm, is resting on the ground on one of its triangular faces. The base edge of that face is inclined  $30^\circ$  to VP. Draw the projections of the solid. (A)

2. A hexagonal prism has side 25 mm and height 50 mm has a corner of its base on the ground and the long edge containing that corner inclined at  $30^\circ$  to HP and  $45^\circ$  to VP. Draw the projections of the solid. (A)

**COURSE OUTCOME 3: Develop projections of sectioned solids and their developmental surface.**

1. A cylinder of base diameter 50mm and height 60mm rest on its base on HP. It is cut by a plane perpendicular to VP and inclined at  $45^{\circ}$  to HP. The cutting plane meets the axis at a distance 15mm from its top base. Draw the sectional plan and true shape of the section. (A)
2. A regular hexagonal pyramid side of base 30 mm and height 60 mm is vertically on its base on HP, such that two of its sides of the base are perpendicular to VP. It is cut by a plane inclined at  $30^{\circ}$  to HP and perpendicular to VP. The cutting plane bisects the axis of the pyramid. Obtain the development of the lateral surface of the truncated pyramid. (A)

**COURSE OUTCOME 4: Develop isometric views from orthographic projections**

1. A cone of diameter 50 mm and axis 70 mm rests on its base on HP. A section plane perpendicular to VP and inclined at  $30^{\circ}$  to HP cuts the solid and passes through a point on axis which is 40 mm above HP. Draw the isometric view of a truncated cone. (A)
2. A pentagonal pyramid of base edge 25 mm and height 65 mm rests vertically on its base on the HP such that one of its base edge parallel to VP. It is cut by a plane, parallel to HP and perpendicular to VP and passes through a point 25 mm from the apex. Draw the isometric view of the frustum of pyramid. (A)

**COURSE OUTCOME 5: Construct the perspective projections of simple solids**

1. Draw the perspective view of a square prism of base side 40mm and height 50mm. one vertical lateral face is parallel to PP and 30mm away from it. The station point is 80mm from PP, 80mm above the base and 60mm to the right of the axis of the prism. (APPLY)
2. A hexagonal pyramid of base side 25mm and axis length 50mm is resting on GP on its base with a side of base is parallel to and 20mm behind PP. The station point is 60mm above GP and 80mm in front of PP and lies in a central plane which is 50mm to the left of the axis of the pyramid. Draw the perspective view of a pyramid. (APPLY)

<b>21EE2501</b>	<b>FUNDAMENTALS OF ELECTRICAL AND ELECTRONICS SCIENCE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
		<b>3</b>	<b>0</b>	<b>2</b>	<b>4</b>
<b>Prerequisites for the course</b>					
Basic Science					
<b>Objectives</b>					
To impart knowledge on					
<ol style="list-style-type: none"> <li>1. DC and AC circuits using basic laws.</li> <li>2. Construction, working principle, EMF equation of DC machines, single phase transformer, alternator, synchronous motor and induction motor.</li> <li>3. ## COURSE LEVEL ASSESSMENT QUESTIONS

### COURSE OUTCOME 1:

1. The resistivity of the conductor depends on\_\_\_\_(u)
2. The resistance of a conductor of diameter  $d$  and length  $l$  is  $R \Omega$ . If the diameter of the conductor is halved and its length is doubled, the resistance will be\_\_\_\_(U)

### COURSE OUTCOME 2:

1. If field current is decreased in shunt dc motor, the speed of the motor\_\_\_\_(U)
2. What is the shunt resistance component equivalent circuit obtained by no load test of an induction motor representative of ? (U)

### COURSE OUTCOME 3:

1. Explain different types of electric drives and the factors affecting the selection of drives (U)
2. Explain the thermal model of an electric motor for
  - (a). Heating the electric motor when starting form cold
  - (b). Cooling the electric motor when it is switched off from the mains. (U)

### COURSE OUTCOME 4:

1. A CE amplifier when bypassed with a capacitor at the emitter resistance has \_\_\_\_
2. A transistor has  $h_{ie}=1K\Omega$  and  $h_{fe}=60$  with an bypassed emitter resistor  $R_e=1k\Omega$ . What will be the input resistance and output resistance?

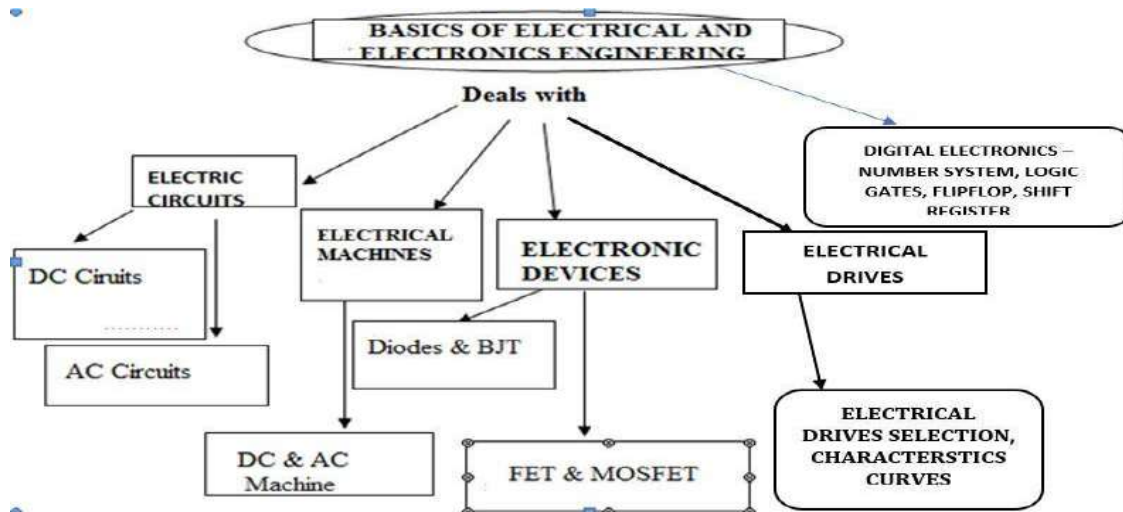

3. Describe the working of a PN junction diode with neat diagrams. Also explain its V-I Characteristics.
4. Explain the working of the CB configuration of BJT

**COURSE OUTCOME 5:**

1. The following hexadecimal number  $(1E.43)_{16}$  is equivalent to \_\_\_\_ (U)
2. In an SR latch built from NOR gates, which condition is not allowed \_\_\_\_ (U)
3. Explain the working of JK flip flop with its logic Diagram.(U)
4. Design a full adder, construct the truth table, simplify the output equations and draw the logic diagram. (U)

S.No	List of Experiments	CO

1. Kannan P Assistant Professor/ECE      kannanece@francisxavier.ac.in

21CS2512	Python Programming (Common for Mechanical and Civil)	L	T	P	C
		2	0	2	3
<b>Preamble</b>					
This course is an introduction to the Python programming language for students without prior programming experience. Students are introduced to core programming concepts like data structures, conditionals, loops, variables, and functions. This course includes an overview of the various tools available for writing and running Python, and gets students coding quickly. It is easy for beginners to learn, it is widely used in many scientific areas for data exploration.					
<b>Prerequisites for the course</b>					
<ul style="list-style-type: none"> <li>• Problem Solving Techniques, Logical Thinking</li> </ul>					
<b>Objectives</b>					
<ol style="list-style-type: none"> <li>1. To know the features of Python.</li> <li>2. To develop Python programs with conditionals and loops.</li> <li>3. To define Python functions and use function calls.</li> <li>4. To make students to apply Python data structures – strings, lists, tuples, dictionaries.</li> <li>5. To work with files in Python.</li> <li>6. To handle exceptions.</li> <li>7. To analyse and explore data using python libraries.</li> </ol>					
<b>UNIT I</b>	<b>INTRODUCTION TO PYTHON</b>	<b>5</b>			
Features of Python - Modes of Python - values and data types: Variables - expressions -statements – Operators - Input and Output – comments.					
<b>UNIT II</b>	<b>CONTROL FLOW, FUNCTIONS</b>	<b>5</b>			
Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Functions: function definition and use, parameters and arguments, recursion.					
<b>UNIT III</b>	<b>STRING, LIST, TUPLES</b>	<b>8</b>			
Strings: string slices, string functions and methods. Compound data - Lists: list operations - listslices - list methods - list loop. Tuples: tuple assignment - tuple as return value					
<b>UNIT IV</b>	<b>DICTIONARY, FILES AND EXCEPTION HANDLING</b>	<b>7</b>			
Dictionaries: operations and methods					

Files and exception: text files, reading and writing files, Command line argument, Errors: Syntax Errors, Runtime errors, Logical Errors – Exceptions – handling exceptions		
<b>UNIT V</b>	<b>MODULES AND PACKAGES</b>	<b>5</b>
Modules, packages, Numpy, Seaborn, Pandas		
<b>Total Periods</b>		<b>30 Theory +60 Lab</b>
<b>S.No</b>	<b>List of Experiments</b>	<b>CO</b>
1	<p>Python Program using conditional statements</p> <p>a) Write a program for checking the given number is even or odd.</p> <p>b) Write a program for finding biggest number among 3 numbers</p> <p>c) Implement python script to read person's age from keyboard and display whether he is eligible for voting or not.</p> <p>d) Implement python script to check the given year is leap year or not.</p>	CO1
2	<p>Python Program using looping statements</p> <p>a) Write a Python Program to generate first N natural numbers.</p> <p>b) Write a python program to read a integer and for all non-negative integers <math>i &lt; n</math>, print <math>i^2</math>.</p> <p>c) Write a Python Program to print factorial of a number.</p> <p>d) Write a Python Program to print sum of digits of a number</p> <p>e) Python Program to Print All Numbers in a Range Divisible by a Given Number</p> <p>f) Python Program to Find Numbers which are Divisible by 7 and Multiple of 5 in a Given Range</p>	CO2
3	<p>Python Programs using functions</p> <p>a) Write a Python Program to Find Fibonacci Numbers using Recursion</p> <p>b) Write a Python Program to generate Electricity Bill.</p>	CO2
4	Python Programs using string	CO3

	<ul style="list-style-type: none"> <li>a) Write a Python Program to calculate the number of digits and letters in a string.</li> <li>b) Write a Python Program to Count Number of Lowercase Characters in a String</li> <li>c) Write a Python Program to Check if the Substring is Present in the Given String</li> </ul>	
5	<p>Python Programs using list</p> <ul style="list-style-type: none"> <li>a) Python Program to Print Largest Even and Largest Odd Number in a List</li> <li>b) Python Program to Remove Duplicates from a List.</li> </ul>	CO3
6	<p>Python Programs using tuples</p> <ul style="list-style-type: none"> <li>a) Write a Python Program to Create a List of Tuples with the First Element as the Number and Second Element as the Square of the Number</li> </ul>	CO3
	<p>Python Programs using dictionaries</p> <ul style="list-style-type: none"> <li>a) Write a Python Program to Find the Sum of All the Items in a Dictionary</li> <li>b) Write a Python Program to Multiply All the Items in a Dictionary</li> </ul>	CO4
5	<p>Python Programs using files</p> <ul style="list-style-type: none"> <li>a) Write a Python Program to Count the Number of Lines, words, characters a in Text File</li> <li>b) Python Program to Copy One File to Another File.</li> </ul>	CO4
7	<p>Implementing real-time/technical applications using Exception handling. (divide by zero error, voter's age validity)</p>	CO4
8	<p>Programs using Python library – NumPy, Pandas, Seaborn</p> <ul style="list-style-type: none"> <li>a) Write a NumPy program to create an element-wise comparison (greater, greater_equal, less and less_equal) of two given arrays.</li> <li>b) Write a NumPy program to multiply the values of two given vectors.</li> <li>c) Write a Pandas program to get the powers of an array values element-wise.</li> <li>d) Write a Pandas program to create and display a DataFrame from a specified dictionary data which has the index labels.</li> </ul>	CO5

	e) Write a Python program to find the correlation between variables of iris data. Also create a heatmap using Seaborn to present their relations.	
--	---	--

### Laboratory Requirements

- 60 Systems with windows / LINUX operating system with python IDLE or equivalent.

Continuous Assessment Test (20 Marks)	Lab Components Assessments (30 Marks)	End Semester Practical Exams (50 Marks)
1. Descriptive questions CAT 1 - 10 Marks CAT 2 - 10 Marks	1. Lab experiments 10 Marks. 2. Model examination with project 20 Marks	1. Descriptive questions

### Outcomes

**Upon completion of the course, the students will be able to:**

**C111.1:** Write Python programs for solving problems using conditional statements.

**C111.2:** Write Python programs for solving problems using looping statement and list and decompose a Python program into functions.

**C111.3:** Represent data using Python strings, lists, and tuples, and solve computational problems using them.

**C111.4:** Solve computational problems using data represented in dictionaries and files handle exceptions while dealing with data.

**C111.5:** Write modules and packages and Use Numpy, Seaborn and Pandas libraries in real time to solve scientific problems.

## COURSE LEVEL ASSESSMENT

### QUESTIONSCOURSE OUTCOME 1:

1. Write a Python Program to read the unit of electricity consumed in a house and calculate the amount to be paid for the electricity consumed. The bill amount should be calculated as per the given specification:
  - a. For 0 to 100 units the per unit is ₹ 0/-

- b. For 0 to 200 units, for the first 100 unit the per unit cost is zero and the next 100 units, the consumer shall pay ₹ 1.5 per unit.
  - c. For 0 to 500 units, the consumer shall pay ₹ 0 for the first 100 units, for the next 100 units the consumer shall pay ₹ 2 per unit, for the next 300 units the unit cost is ₹3.00/- (Apply)
2. Explain in detail about the various conditional statements that are supported by Python. (Understand)
  3. Differentiate variables and constants. (Analyse)

### COURSE OUTCOME 2:

1. Write a Python Program to Read a Number n and Compute n+nn+nnn. (Apply)
2. Differentiate break and continue. (Analyse)
3. Write a Python Program to read the unit of electricity consumed in a house and calculate the amount to be paid for the electricity consumed. The bill amount should be calculated as per the given specification:
  - a. For 0 to 100 units the per unit is ₹ 0/-
  - b. For 0 to 200 units, for the first 100 unit the per unit cost is zero and the next 100 units, the consumer shall pay ₹ 1.5 per unit.
  - c. For 0 to 500 units, the consumer shall pay ₹ 0 for the first 100 units, for the next 100 units the consumer shall pay ₹ 2 per unit, for the next 300 units the unit cost is ₹3.00/- (Apply)

### COURSE OUTCOME 3:

1. What is printed by the following statements? (Apply)

```
s = "engineering"
```

```
r = ""
```

```
for item in s:
```

```
    r = item.upper() + r
    print(r)
```

2. Is string mutable. Justify your answer. (Understand)
3. List out some compound data type that are supported by python. (Remember)

### COURSE OUTCOME 4:

1. What happens if the file is not found in the following Python code? (Apply)
- ```
a=False

while not a:

try:
```

```
f_n = input("Enter
```

```
file name")i_f =
```

```
open(f_n, 'r')
```

```
except:
```

```
print("Input file not found")
```

2. Write a Python Program that Reads a Text File and Counts the Number of Times a Certain Letter Appears in the Text File. (Apply)
3. How will you handle exception when it is raised? Explain. (Understand)

### COURSE OUTCOME 5:

1. Write a Pandas program to create and display a one-dimensional array-like object containing an array of data using Pandas module. (Apply)
2. Explain in detail about modules and packages in Python. (Understand)

| 21GE1512                                                                                                                                                          | Engineering Workshop                                                                                                           | L                  | T      | P | C |

| 10. | Fitting water pipeline to wash basin           |                                                                                                  | Plumbing |
| 11. | Construct of partition wall using Flemish bond | Masonry & Concrete                                                                               | C112.3   |
| 12. | Grade of Concrete                              |                                                                                                  | C112.3   |
| 13. | House Wiring                                   | 1. Fluorescent Wiring<br>2. Staircase Wiring<br>3. Go down Wiring<br>4. Residential House Wiring | C112.4   |
| 14. | GSM based House Monitoring Control System      | Soldering Practice – Component Devices & Circuits                                                | C112.6   |
| 15. | Android based electrical appliance control     | Soldering Practice – Component Devices & Circuits                                                | C112.6   |

### Suggestive Assessment Methods

**Lab Components Assessments**  
(60 Marks)

**End Semester Exams**  
(40 Marks)

**LAB EXPERIMENTS 40 MARKS**  
**MODEL LAB WITH PROJECT 20 MARKS**

**40**

### Outcomes

**Upon completion of the course, the students will be able to:**

|               |                                                                      |
|---------------|----------------------------------------------------------------------|
| <b>C113.1</b> | Fabricate carpentry components                                       |
| <b>C113.2</b> | Use welding equipment's to join the structures and sheet metal works |
| <b>C113.3</b> | Perform basic plumbing operations and concrete study                 |

|               |                                                                 |
|---------------|-----------------------------------------------------------------|
| <b>C113.4</b> | Carry out basic home electrical works and appliances            |
| <b>C113.5</b> | Measure the electrical and electronic Parameters and quantities |
| <b>C113.6</b> | Elaborate on the components, gates, soldering practices         |

**Laboratory Requirements****CIVIL**

|---|---------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|
| 1 | Assorted components for plumbing consisting of metallic pipes, Plastic pipes, flexible pipes, couplings, unions, elbows, plugs and other fittings | 15 Sets                    |
| 2 | Carpentry vice (fitted to work bench)                                                                                                             | 15 Nos                     |
| 3 | Standard woodworking tools                                                                                                                        | 15 Sets                    |
| 4 | Models of industrial trusses, door joints, furniture joints                                                                                       | 5 Nos                      |
| 5 | Power Tools:<br>Demolition Hammer<br>Hand Drilling Machine<br>Wooden Cutter                                                                       | 2 Nos.<br>2 Nos.<br>2 Nos. |

**MECHANICAL**

|   |                                                                             |          |
|---|-----------------------------------------------------------------------------|----------|
| 1 | Arc welding transformer with cables and holders                             | 5 Nos.   |
| 2 | Welding booth with exhaust facility                                         | 5 Nos.   |
| 3 | Welding accessories like welding shield, chipping hammer, Wire brush, etc., | 5 Sets   |
| 4 | Power Tool: Angle Grinder                                                   | 2 Nos.   |
| 5 | Sheet metal working tools                                                   | 15 Sets. |
| 6 | Standard working tools                                                      | 15 sets  |

**ELECTRICAL**

|   |                                                                  |         |
|---|------------------------------------------------------------------|---------|
| 1 | Assorted electrical components for house wiring                  | 15 Sets |
| 2 | Electrical Measuring Instruments                                 | 10 Sets |
| 3 | Study purpose items: Iron box, fan and regulator, emergency lamp | 1 Each  |
| 4 | Megger (250V/500V)                                               | 1No.    |
| 5 | Power Tools: (a) Range Finder (b) Digital Live-wire detector     | 2 Nos   |

**ELECTRONICS**

|   |                                                    |         |
|---|----------------------------------------------------|---------|
| 1 | Soldering guns                                     | 10 Nos. |
| 2 | Assorted electronic components for making circuits | 50Nos.  |
| 3 | Small PCBs                                         | 10 Nos. |
| 4 | Multimeters                                        | 10Nos.  |

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Students will be able to fabricate carpentry components (Apply)**

1) Make a T-lap joint from the given wood pieces as shown in the drawing.

2) Make a dovetail joint from the given wooden work piece as per the drawing given below.

**COURSE OUTCOME 2: Students will be able to Use welding equipment's to join the**

**structures and sheet metal works (Apply)**

1. Make a Lap joint from the given pieces using arc welding as shown in the drawing.

1. Prepare a 'T' joint from the given M.S. plates using arc welding as shown in the diagram

2. Prepare a 'Butt' joint from the given M.S. plates using arc welding as shown in the diagram

**COURSE OUTCOME 3: Students will be able to perform basic plumbing operations**

1. Make a pipe fitting connections from the given GI / PVC pipes and fittings as shown in the drawing.

2. Prepare the GI / PVC Pipe joint by using the given pipes and fittings as per the diagram given below.

3. Study of basic construction materials, masonry and concretes

**COURSE OUTCOME 4: Students will be able to carry out basic home electrical works and appliances.**

1. Make an industrial illumination circuit wiring using switches, fuse, indicator, lamp and energy meter.

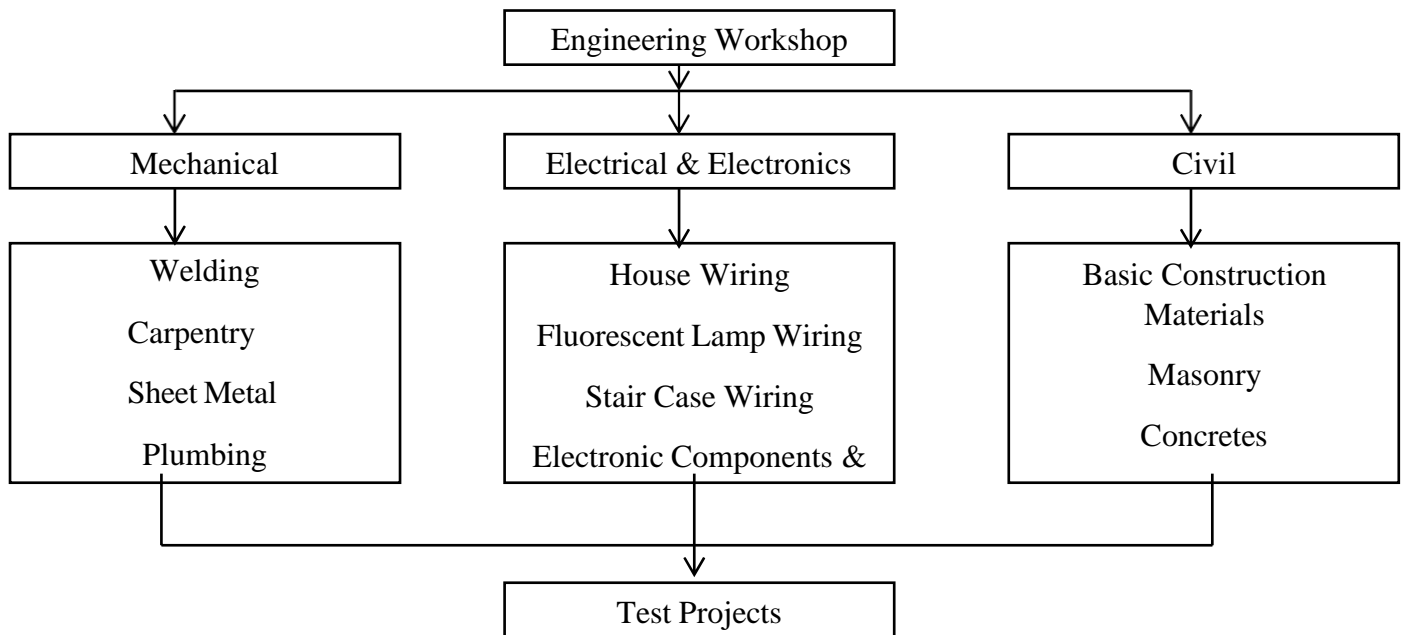

**COURSE OUTCOME 5: Students will be able to measure the electrical and electronic parameters and quantities**

1. Conduct an experiment using a starter to show the lamp will continue to glow even when starter is removed.

**COURSE OUTCOME 6: Students will be able to elaborate on the components, gates, soldering practices**

1. To perform soldering and Desoldering of electronic components on PCB

**Concept Mapping**

| <b>Preamble:</b><br>This course provides an introduction to numerical methods and engineering statistics for engineering students. The focus of numerical methods is translating engineering problems into algorithms and implementing them in a spreadsheet or programming language. Topics covered include numerical interpolation, integration and differential equations. The statistics portion teaches students basic probability theory, standard distribution, the central limit theorem, hypothesis testing, confidence intervals and design of experiments. |                                                              |            |   |   |   |
| <b>Prerequisites for the course</b><br>Basic knowledge in probability theory.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                              |            |   |   |   |
| <b>Objectives</b><br>The Course will enable learners:<br><ol style="list-style-type: none"> <li>1. To improve their ability in solving partial and ordinary differential equations with initial and boundary conditions.</li> <li>2. To have knowledge in simple integrals.</li> <li>3. To introduce the basic concepts of probability.</li> <li>4. To familiarize with ANOVA</li> <li>5. To apply the concept of testing of hypothesis to Engineering problems</li> </ol>                                                                                            |                                                              |            |   |   |   |
| <b>UNIT I</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>Interpolation and Numerical Integration</b>               | <b>9+3</b> |   |   |   |
| Lagrange's interpolation formula for unequal intervals – Newton's forward and backward difference interpolation for Equal intervals – Numerical single integrations using Trapezoidal, Simpson's 1/3 rule and Simpson's 3/8 rule                                                                                                                                                                                                                                                                                                                                      |                                                              |            |   |   |   |
| <b>SUGGESTED EVALUATION METHODS:</b><br><ul style="list-style-type: none"> <li>• Tutorial Problems on Newton's forward and backward interpolation, Numerical integration.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                  |                                                              |            |   |   |   |
| <b>UNIT II</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Numerical Solution of Ordinary Differential Equations</b> | <b>9+3</b> |   |   |   |
| Solution of ODE by Single step methods: Taylor's series method - Euler's method - Fourth order Runge-Kutta method for solving first order equations - Multi step methods : Milne's method for solving first order equations.                                                                                                                                                                                                                                                                                                                                          |                                                              |            |   |   |   |

| <b>UNIT IV</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Testing of Hypothesis</b>                                 | <b>9+3</b> |   |   |   |
| Sampling distributions and Standard Error - Small samples and large samples - Test of hypothesis - Type I, Type II Errors - Large sample tests for mean –Small sample tests for mean – t and f test - Chi-Square distribution -Test of independence of attributes.                                                                                                                                                                                                                                                                                                    |                                                              |            |   |   |   |

**SUGGESTED EVALUATION METHODS:**

- Tutorial Problems on Small sample tests for mean – t, f test, Chi- Square distribution.

**UNIT V****Design of Experiments****9+3**

Basic principles of experimentation - Analysis of variance – One-way classification – Completely Randomized Design – Two-way classification - Randomized Block Design – Comparison of CRD and RBD.

**SUGGESTED EVALUATION METHODS:**

- Tutorial Problems on ANOVA, Completely Randomized Design

**Total Periods****45 + 15 = 60 Periods****Suggestive Assessment Methods**

| <b>Continuous Assessment Test<br/>(20 Marks)</b>                 | <b>Formative Assessment Test<br/>(20 Marks)</b> | <b>End Semester Exams<br/>(60 Marks)</b> |
|------------------------------------------------------------------|-------------------------------------------------|------------------------------------------|
| 1. Descriptive Questions<br>CAT 1 – 10 Marks<br>CAT 2 – 10 Marks | 1. Assignment<br>2. Online Quizzes              | 1. Descriptive Questions                 |

**Outcomes****Upon completion of the course, the students will be able to:**

- CO 1: Apply numerical techniques in interpolations and Integration (Apply)  
 CO 2: Apply the concepts of probability which can describe real life phenomenon. (Apply)  
 CO 3: Apply the concept of probability distributions which can describe real life Problems (Apply)  
 CO 4: Compare testing of hypothesis for small and large samples in real life problems. (Analyze)  
 CO 5: Analyze the design of experiments in the field of agriculture (Analyze)

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1 (CO 1) : (Apply)**

- 1) (i) Find the y(3) in the following table using Lagrange's interpolation formula

|   |   |   |   |    |
|---|---|---|---|----|
| X | 0 | 1 | 2 | 4  |
| Y | 1 | 3 | 9 | 81 |

- ii) By dividing the range into 10 equal parts evaluate  $\int_0^{\pi} \sin^2 x \, dx$

- 2) Find y(0.1) using Runge-Kutta (R.K) method given that  $\frac{dy}{dx} = y^2 + xy$ ; y(0)=1

**COURSE OUTCOME 2 (CO 2) : (Apply)**

- 1) A random variable 'X' has the following probability function

|      |   |    |    |    |    |     |     |     |     |
|------|---|----|----|----|----|-----|-----|-----|-----|
| X    | 0 | 1  | 2  | 3  | 4  | 5   | 6   | 7   | 8   |
| p(x) | a | 3a | 5a | 7a | 9a | 11a | 13a | 15a | 17a |

- (i) Determine the value of 'a'  
 (ii) Find  $P(X < 3)$ ,  $P(X \geq 3)$ ,  $P(0 < X < 5)$   
 (iii) Find the distribution function of X.
- 2) If X is a continuous random variable with probability density function

$$f(x) = \begin{cases} kx^2, & -1 < x < 1 \\ 0, & \text{else where} \end{cases}$$

- then find (i) The value of k  
 (ii) The mean and variance of X  
 (iii)  $P\left(\frac{1}{3} \leq x < 4\right)$

### COURSE OUTCOME 3 (CO 3) : (Apply)

- 1) Derive Mean and Variance of a Binomial distribution  
 2) The weekly wages of 1000 workmen are normally distributed around a mean of Rs. 70 with Standard Deviation of Rs. 5. Estimate the number of workers whose weekly wages will be (i) Between Rs. 69 and 72 (ii) less than Rs. 69 (iii) more than Rs 72.

### COURSE OUTCOME 4 (CO 4) : (Analyze)

1. A random sample of 10 boys had the following I.Q.'s 70, 120, 110, 101, 88, 83, 95, 98, 107, 100. Do these data support the assumption of a population mean I.Q of 100 ? Find a reasonable range in which most of the mean I.Q values of samples of 10 boys lie.

2. To verify whether a course in accounting improved performance, a similar test was given to participant both before and after the course. The marks are

|          |    |    |    |    |    |    |    |    |    |    |    |    |
|----------|----|----|----|----|----|----|----|----|----|----|----|----|
| Before : | 44 | 40 | 61 | 52 | 32 | 44 | 70 | 41 | 67 | 72 | 53 | 72 |
| After :  | 53 | 38 | 69 | 57 | 46 | 39 | 73 | 48 | 73 | 74 | 60 | 78 |

What the course useful?

3. Two batches each of 12 animals are taken for test of inoculation. One batch was inoculated and the other batch was not inoculated. The numbers of dead and surviving animals are given in the following table in the both cases. Can the inoculation be regarded as effective against the disease?

|                | Dead | Survived |
|----------------|------|----------|
| Inoculated     | 15   | 85       |
| Not inoculated | 25   | 75       |

### COURSE OUTCOME 5 (CO 5): (Analyze)

1. An experiment was designed to study the performance of 4 different detergents for cleaning fuel injectors. The following "cleanness" readings were obtained with specially designed equipment for 12 tanks of gas distributed over 3 different models of engines:

|             | Engine 1 | Engine 2 | Engine 3 | Total |
|-------------|----------|----------|----------|-------|
| Detergent A | 45       | 43       | 51       | 139   |
| Detergent B | 47       | 46       | 52       | 145   |
| Detergent C | 48       | 50       | 55       | 153   |
| Detergent D | 42       | 37       | 49       | 128   |
| Total       | 182      | 176      | 207      | 565   |

Perform the ANOVA and test at 0.01 level of significance whether there are differences in the detergents or in the engines.

2. A variable trial was conducted on wheat with 4 varieties in a Latin Square Design . The plan of the experiment and the per plot yield are given below.:

|   |    |   |    |   |    |   |    |
|---|----|---|----|---|----|---|----|
| C | 25 | B | 23 | A | 20 | D | 20 |
| A | 19 | D | 19 | C | 21 | B | 18 |
| B | 19 | A | 14 | D | 17 | C | 20 |
| D | 17 | C | 20 | B | 21 | A | 15 |

Analyze data and interpret the result.

| 21ME3601                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | ENGINEERING THERMODYNAMICS                           | L          | T | P | C                      |

**Course Outcomes**

**Upon completion of the course, the students will be able to:**

**C202.1:** Understand the zeroth and first law of thermodynamics, temperature scales and calculate the property changes in closed and open engineering systems.

**C202.2:** Apply the second law of thermodynamics in analysing the performance of thermal devices through energy and entropy calculations.

**C202.3:** Evaluate various properties of steam and performance parameters of Rankine cycle.

**C202.4:** Understand the properties of gases and its thermodynamic relations.

**C202.5:** Analyse the properties of air-vapour mixtures and understand the various psychrometric processes.

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1 Understand the zeroth and first law of thermodynamics, temperature scales and calculate the property changes in closed and open engineering systems (Understand, Apply, Analyze, Evaluate)**

1. A piston and cylinder machine contains a fluid system which passes through a complete cycle of four processes. During the cycle, the sum of all heat transfers is  $-170\text{kJ}$ . The system completes 100 cycles per minute. Complete the following table showing the method for each item, and compute the net rate of work input in kW. (An)

| Process | Q (kJ/min) | W (kJ/min) | $\Delta E$ (kJ/min) |
|---------|------------|------------|---------------------|
| a-b     | 0          | 2,170      | -----               |
| b-c     | 21,000     | 0          | -----               |
| c-d     | -2,100     | -----      | -36,600             |
| d-a     | -----      | -----      | -----               |

2. Air flows steadily at the rate of  $0.5\text{ kg/s}$  through an air compressor entering at  $7\text{m/s}$  velocity,  $100\text{ kPa}$  pressure and  $0.95\text{ m}^3/\text{kg}$ , volume and leaving at  $5\text{m/s}$ ,  $700\text{kPa}$  and  $0.19\text{ m}^3/\text{kg}$ . The internal energy of the air leaving is  $90\text{ kJ/kg}$  greater than that of the air entering. The cooling water in the compressor jackets absorbs heat from the air at the rate of  $58\text{ kW}$ .
  - (a). Compute the rate of shaft work input to the air in kW.
  - (b). Find the ratio of the inlet pipe diameter to the outlet pipe diameter. (E)

**COURSE OUTCOME 2: Apply the second law of thermodynamics in analyzing the performance of thermal devices through energy and entropy calculations (Apply, Analyze, Evaluate)**

1. A reversible heat engine operating between reservoirs at  $900\text{K}$  and  $300\text{K}$  drives a reversible refrigerator operating between reservoirs at  $300\text{K}$  and  $250\text{K}$ . The heat engine receives  $1800\text{kJ}$  heat from  $900\text{K}$  reservoir. The net output from the combined engine refrigerator is  $360\text{kJ}$ . Find the heat transferred to the refrigerator and the net heat rejected to the reservoir at  $300\text{K}$ . (An)

- Two kg of air at 500 kPa, 80°C expands adiabatically in a closed system until its volume is doubled and its temperature becomes equal to that of the surroundings which is at 100 kPa, 5°C. For this process, Determine:

- The maximum work
- The change in availability
- The irreversibility. (E)

**COURSE OUTCOME 3: Calculate various properties of steam and performance parameters of Rankine cycle. (Remember, Apply, Analyze)**

- Explain the phase transformation that takes place when ice (solid) is heated continuously till superheated steam is obtained. Name the different states involved. Sketch the transformation on a 'temperature' Vs 'heat added' diagram. (R)
- In a Rankine cycle, the steam at inlet to turbine is saturated at a pressure of 35 bar and the exhaust pressure is 0.2 bar. The flow rate of steam 9.5 kg/s. Determine (i) the pump work (ii) the turbine work (iii) Rankine efficiency (iv) Condenser heat flow (v) Work ratio (vi) Specific steam consumption. (An)

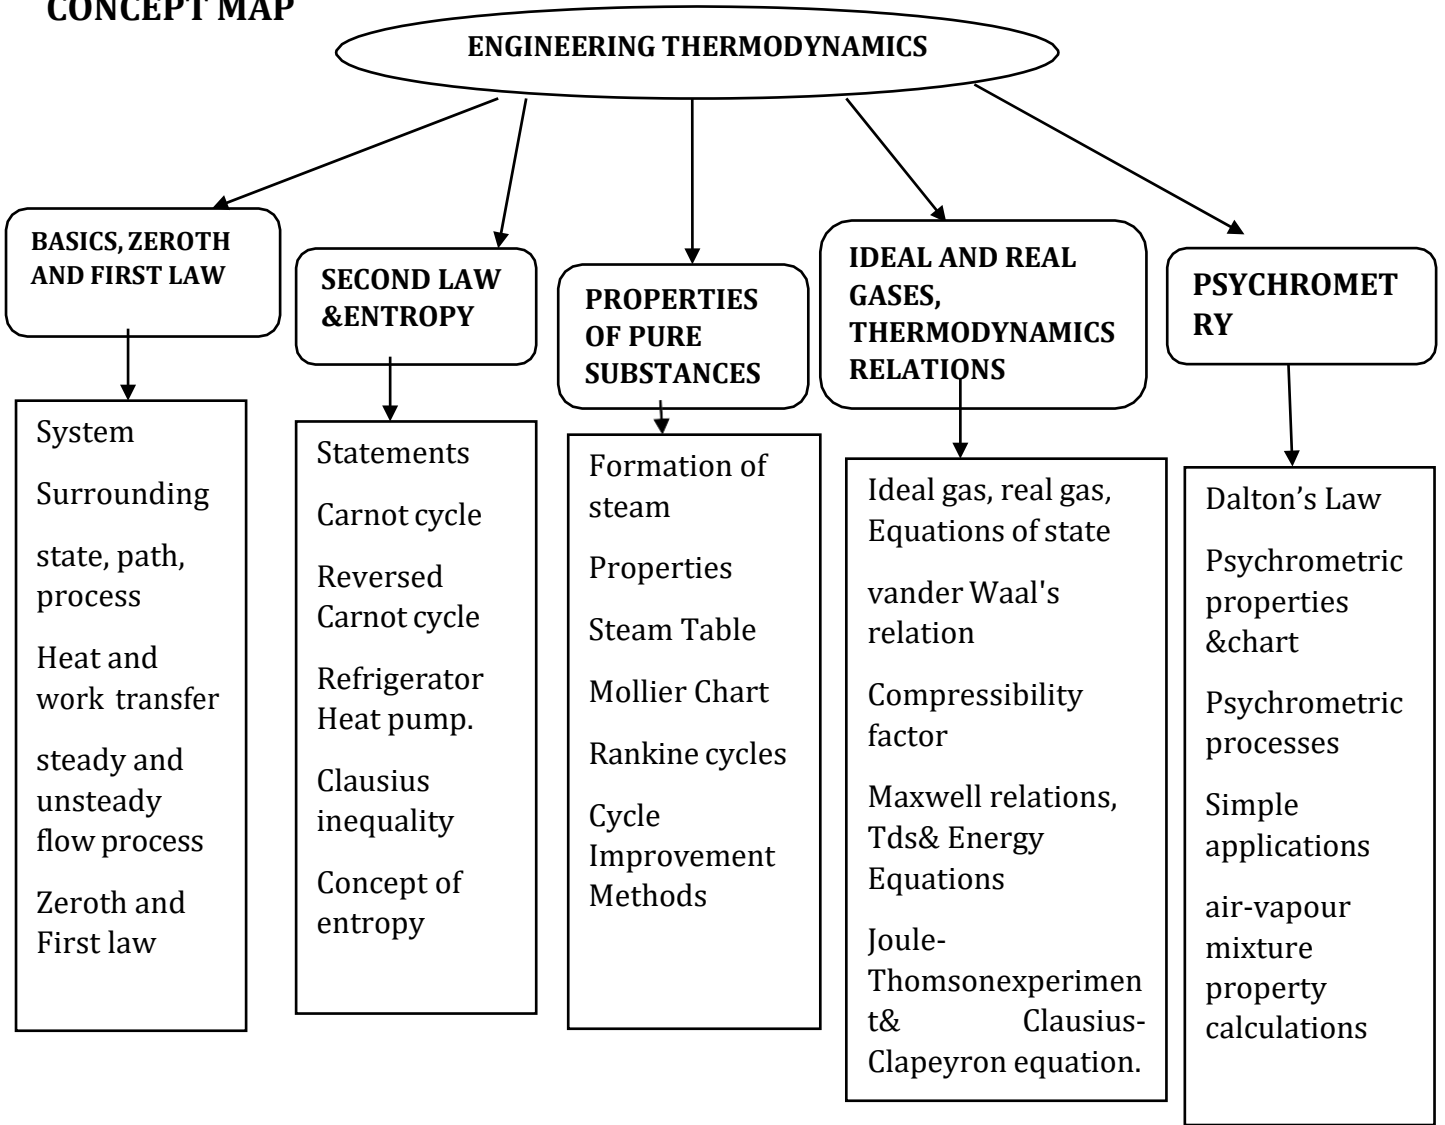

**COURSE OUTCOME 4: Understand the properties of gases and its thermodynamic relations (Remember, Understand)**

- Derive Joule Thomson coefficient and prove that Joule Thomson coefficient for ideal gas is zero. (R)
- Deduce the expression for various thermodynamic relations of ideal and real gases. (U).

**COURSE OUTCOME 5: Calculate the properties of air-vapour mixtures and understand the various psychrometric processes (Apply, Analyze, Evaluate)**

- Air at 20°C, 40% RH is mixed adiabatically with air at 40°C, 40% RH in the ratio of 1 kg of the former with 2 kg of the latter (on dry basis). Find the final condition of air. (An)
- An air – water vapour mixture at 20°C and 50% relative humidity at a pressure of 1.013 bar is heated at constant pressure to a temperature of 35°C. Calculate a) The initial and final specific humidity b) Final relative humidity c) Dew point temperature d) Heat transferred per kg of dry air. (E)

**CONCEPT MAP**

**Course Outcomes****Upon completion of the course, the students will be able to:**

- C203.1: Calculate the fluid properties using continuity, energy and momentum equation.
- C203.2: Estimate the major loss in flow through pipes using Darcy Weisbach equation.
- C203.3: Discover the relationship among the parameters involved in the given fluid phenomenon and to predict the performances of prototype by model studies.
- C203.4: Construct the performance curves for both impulse and reaction turbines.
- C203.5: Construct the characteristic curves for centrifugal and reciprocating pumps using empirical relations.

### COURSE LEVEL ASSESSMENT QUESTIONS

**C203.1: List the various fluid properties and apply control volume concept to fluid mechanics problems - (Apply )**

1. Define specific gravity and mention the specific gravity of Mercury. [R]
2. The temperature of lubricant circulated in the engine gets raised during working stroke. What happens to its viscosity? [U]
3. Water flows through a pipe AB 1.2 m diameter at 3 m/s and then passes through a pipe BC 1.5 m diameter. At C the pipe branches. Branch CD is 0.8 m in diameter and carries one - third of the flow in AB. The flow velocity in the branch CE is 2.5 m/s. Find the volume rate of flow at AB, the velocity in BC, the velocity in CD and the diameter of CE. [Ap]

**C203.2: Estimate the major loss in flow through pipes using Darcy Weisbach equation. (Apply)**

1. Enumerate the various losses that occur in the fluid flowing through the pipe. [R]
2. Mention the governing equation for minor losses that occur in a pipe having an obstacle formed due to scaling in boiler tubes. [U]
3. Three pipes of 400 mm, 200 mm and 300 mm diameters have lengths of 400 m, 200 m, and 300 m respectively. They are connected in series to make a compound pipe. The ends of this compound pipe are connected with two tanks whose difference of water levels is 16 m. if co-efficient of friction for these pipes is same and equal to 0.005, determine the discharge through the compound pipe neglecting first the minor losses and then including them. [Ap]

**C203.3: Discover the relationship among the parameters involved in the given fluid phenomenon and to predict the performances of prototype by model studies. (Apply)**

1. Name a few fluid properties and state its dimensions. [R]
2. Explain the term dimensional homogeneity. [U]
3. The resisting force  $R$  of a supersonic plane during flight can be considered as dependent upon the length of the aircraft  $l$ , velocity  $V$ , air viscosity  $\mu$ , air density  $\rho$  and bulk modulus of air  $K$ . Express the functional relationship between these variables and the resisting force. [Ap]

**C203.4: Describe the working principle and construct performance curves for both impulse and reaction turbines-( Apply)**

1. With a neat sketch represent the velocity triangle for a hydraulic turbine. [R]
2. Explain the difference between the impulse and reaction turbines. [U]
3. Determine the power given by the jet of water to the runner of a Pelton wheel which is having tangential velocity as 20 m/s. the net head on the turbine is 50 m and discharge through the jet water is 0.03 m<sup>3</sup>/s. the side clearance angle is 15° and take  $C_v$  as 0.975. [Ap]

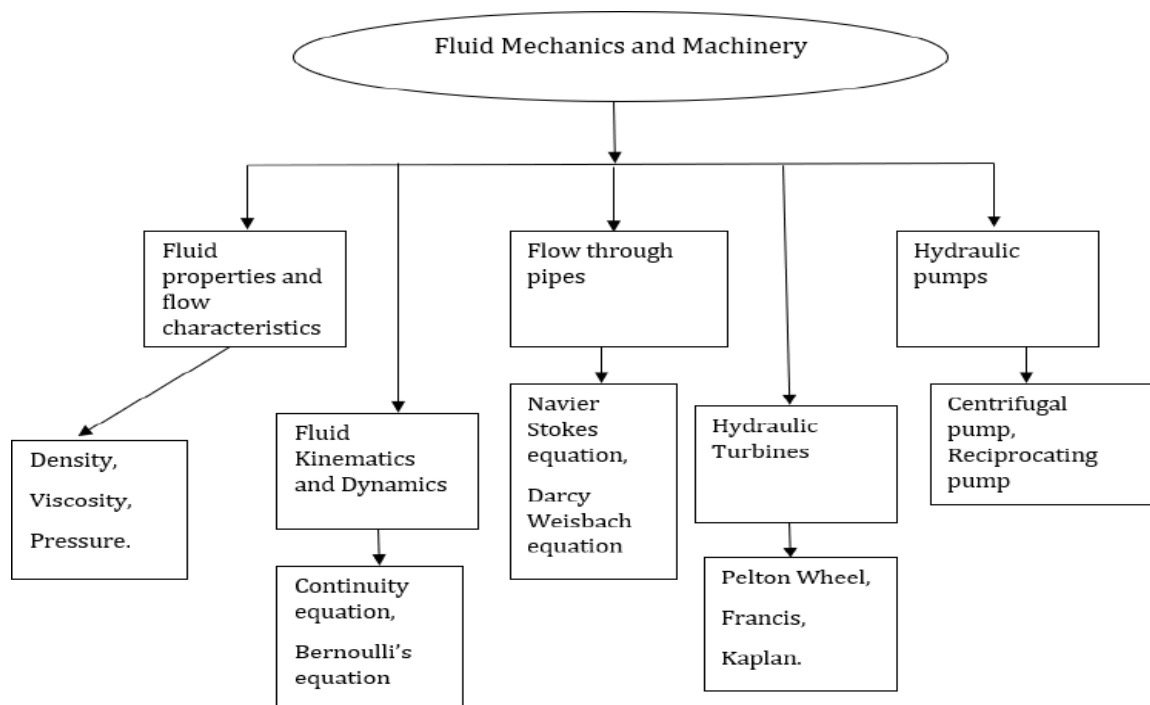

**C203.5: Construct the characteristic curves for centrifugal and reciprocating pumps using empirical relations-( Apply)**

1. Define manometric efficiency. [R]

2. What happens to overall efficiency when mechanical efficiency is doubled and manometric efficiency is halved? [U]

3. The internal and external diameters of the impeller of a centrifugal pump are 200 mm and 400 mm respectively. The pump is running at 1200 rpm. The vane angles of the impeller at inlet and outlet are 20 and 30 respectively. The water enters the impeller radially and velocity of flow is constant. Determine the work done by the impeller per unit weight of water. [Ap]

### CONCEPT MAP

| 21ME3501                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | ENGINEERING MATERIALS AND METALLURGY                    | L        | T | P | C         |

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Explain alloys and phase diagram, Iron-Iron carbon diagram and steel classification for material development (Remember and Understand)**

1. Construct the Iron-Carbon equilibrium phase diagram and discuss the different phase that takes place in it. **(U)**
2. Classify the types of steel and explain its micro structure properties and application **(U)**

**COURSE OUTCOME 2: Explain isothermal transformation, continuous cooling diagrams and different heat treatment processes for material development (Remember, Understand and Apply)**

1. Construct the TTT diagram and explain the following heat treatments applied to an eutectoid steel: Austempering, Martempering and Hardening **(U)**
2. Explain Case hardening Classified as nitriding, cyaniding and carbonitriding **(A)**

**COURSE OUTCOME 3: Clarify the effect of alloying elements on ferrous and non-ferrous metals(Remember and Understand)**

1. Describe the stainless steels with respect to composition, properties and Applications. **(U)**  
(ii)Write short notes on HSLA Steel. **(U)**
2. Discuss different types of copper alloys and their properties and applications. **(R)**  
(ii)Write short notes on bearing alloys. **(U)**

**COURSE OUTCOME 4: Summarize the properties and applications of non metallic materials.(Remember, Understand and Apply)**

1. Describe the properties and applications of the following polymers i) PVC ii) PS iii) PET iv) PA. (R)

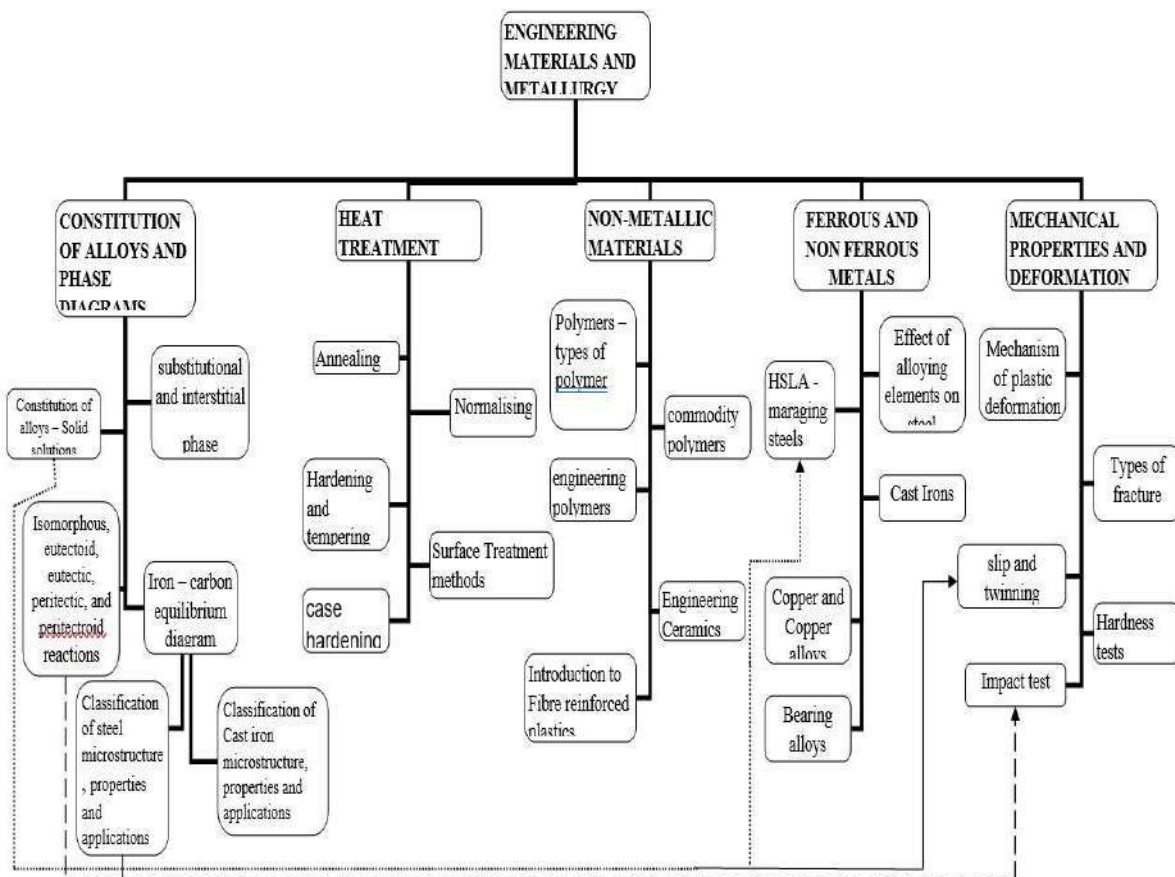

2. Explain the following Engineering Ceramics: a)  $Al_2O_3$  b) SiC c)  $Si_3N_4$  (U)

**COURSE OUTCOME 5: Explain/demonstrate the testing of mechanical properties. (Remember, Understand and Apply)**

1. Explain Brinell hardness testing and its applications(U)

2. Write down the procedure for preparing Charpy and Izod specimens for impact testing and also explain how testing is performed? (A)

**Course Outcomes**

**Upon completion of the course, the students will be able to:**

- C205.1** Identify the different metal casting processes, defects and different metal joining processes
- C205.2** Define the various hot working , cold working methods of metals and sheet metal making processes
- C205.3** Depict the basic concepts of metal cutting and perform cutting force and tool life calculations.
- C205.4** Demonstrate the operational features of the centre lathe CNC Machines and the working principle of shaper, milling and drilling machine tools
- C205.5** Identify various finishing processes and explain the working principle of gear cutting machine tools

| ANALYZE         |       |       |       |       |              |
| EVALUATE        |       |       |       |       |              |
| CREATE          |       |       |       |       |              |

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1 : Identify the different metal casting processes, defects and different metal joining processes (Remember, Understand)**

1. What is the principle of thermit welding? Explain the same with a neat diagram.(R)
2. Explain in detail the working principle of centrifugal casting. (U)
3. What are the Defects in Welding and Casting? (U)

**COURSE OUTCOME 2 : Define the various hot working , cold working methods of metals and sheet metal making processes (Remember, Understand)**

4. Explain the classifications of forging process based on the process used? (U)
5. Explain in detail with neat sketch. (i) Bending; (ii) Deep Drawing. (R)

**COURSE OUTCOME 3 : Depict the basic concepts of metal cutting and perform cutting force and tool life calculations. (Remember, Understand, Apply)**

6. What are the assumption made in drawing Merchant's circle. (R)
7. Discuss the purpose of cutting fluids. (R)

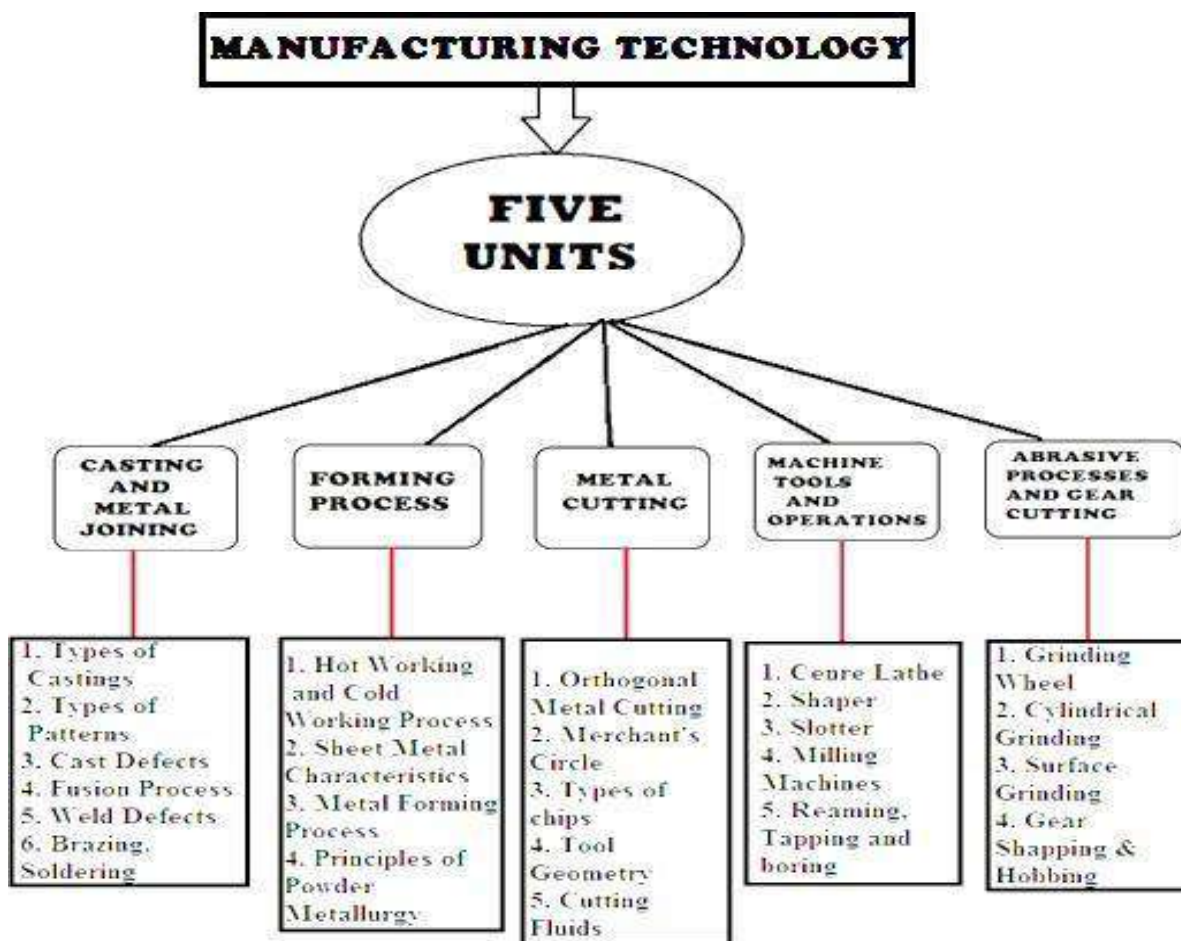

**COURSE OUTCOME 4 : Demonstrate the operational features of the centre lathe CNC Machines and the working principle of shaper, milling and drilling machine tools (Remember, Understand, Apply)**

8. Explain the different machining operations performed on lathe with sketches. (U)
9. Describe of crank and slatted link mechanism used in shaper with nearsketches. (U)

**COURSE OUTCOME 5 : Identify various finishing processes and explain the working principle of gear cutting machine tools (Remember, Understand)**

10. Explain the gear hobbing processes with sketches. (U)
11. Discuss the factors influencing the selection of grinaing wheel. (U)
12. Explain the centreless grinding operation with sketches. (U)

**CONCEPT MAP**

**COURSE LEVEL ASSESSMENT QUESTIONS(LIST OF PROJECTS)**

**Level 1**

1. Draw any one component as shown below with necessary comments (Assume suitable dimensions).

2. Draw the isometric view of any one component given below (Assume suitable dimensions).

3. Assemble the parts and draw views – any one (Assume suitable dimensions).

Level 2 (any one Project)

1. Design and drafting of Gear train

In this project-based course, Student will learn to develop a Gear train design assembly using AutoCAD software. By developing this project, the will learn to design: Gear Shafts, Spur Gears, Bearing Housing, Bearings and Assembly of a gear train.

2. Design and Drafting of Bi-Cycle as per the dimensions given

This project course introduces you to the concept of designing Mechanisms that can be applied in real-time. Mechanisms are the base of every design, from simple toys to vehicles to spaceships.

Level 3

Students are asked to do own projects (both CAD Model and Real Working Model) based on the outcome of the level 1 and 2 projects.

Example Projects:

1. Design and draw the mechanism for car towing.

2. Design and draw the model for material handling of lime stone or food materials

| C208.1. Make a mould using different types of patterns.                                                                                                                                                                                                                                                                                                                                 |                                                                                           |          |                                          |          |            |
| C208.2. Create objects using sheet metal.                                                                                                                                                                                                                                                                                                                                               |                                                                                           |          |                                          |          |            |
| C208.3. Perform the Welding Process for the given materials.                                                                                                                                                                                                                                                                                                                            |                                                                                           |          |                                          |          |            |
| C208.4. Perform different machining processes in lathe, shaper, grinders and milling machines and Measure their Cutting forces.                                                                                                                                                                                                                                                         |                                                                                           |          |                                          |          |            |
| C208.5. Perform different gear generating process based on requirements.                                                                                                                                                                                                                                                                                                                |                                                                                           |          |                                          |          |            |

### Laboratory Requirements

- 1.Moulding Table 12”X12”
- 2.Moulding Box
- 3.Various Patterns for Casting
- 4.Various Foundry Tools
5. Arc welding transformer with cables and holders 5 Nos.
6. Welding booth with exhaust facility 5 Nos.
7. Welding accessories like welding shield, chipping hammer, Wire brush, etc., 5 Sets
8. Anvil 1 No.
9. Sheet metal tools
10. Standard working tools 15 sets
11. Centre lathe 7 Nos.
12. Shaping machine 1 No
13. Horizontal Milling Machine 2 No
14. Vertical Milling Machine 1 No
15. Surface Grinding Machine 1 No
16. Cylindrical Grinding Machine 1 No
17. Lathe Tool Dynamometer 1 No
18. Milling Tool Dynamometer 1No
19. Gear Hobbing Machine 1 No
- 20.Tool Makers Microscope 1 No
21. Gear Shaping machine 1 No

| <p>At the end of the course, the students will be able to</p> <p>C209.1. Perform test on Orifice, Venturi and Rota meter to determine the coefficient of discharge</p> <p>C209.2. Draw the characteristics of curve of Centrifugal and Gear pump</p> <p>C209.3. Analysis the performance of Reciprocating pump</p> <p>C209.4. Perform the test on impulse turbine (Pelton) and draw its characteristics curve</p> <p>C209.5. Draw the characteristics curve for reaction turbine like Francis and Kaplan turbine</p> |                                                                                     |               |                                      |          |          |

**Laboratory Requirements For a Batch of 30 Students**

| S.No. | NAME OF THE EQUIPMENT    | Qty.  |
|-------|--------------------------|-------|
| 1     | Orifice meter setup      | 1 No  |
| 2     | Venturi meter setup      | 1 No  |
| 3     | Rotameter setup          | 1 No. |
| 4     | Pipe Flow analysis setup | 1 No. |
| 5     | Centrifugal pump         | 1 No  |
| 6     | Reciprocating pump setup | 1 No. |
| 7     | Gear pump setup          | 1 No. |
| 8     | Pelton wheel setup       | 1 No  |
| 9     | Francis turbine setup    | 1 No  |
| 10    | Kaplan turbine setup     | 1 No  |

**Course Outcomes****Upon completion of the course, the students will be able to:**

- C210.1: Construct a tool room for appropriate function taking into account the safety and guarding devices.
- C210.2: Prepare a part programming using canned cycles, subroutines and do loops.
- C210.3: Analyze the difference between FMS, Group technology, CAD/CAM and CIM
- C210.4: Complete the interfacing of sensors/actuators with PC, condition monitoring, adaptive control, HMI and SCADA systems
- C210.5: Select the suitable IoT for automation

**COURSE LEVEL ASSESSMENT QUESTIONS**

**C210.1: Construct a tool room for appropriate function taking into account the safety and guarding devices – Apply**

1. Explain the usage of slideways, rollers and coating. [R]
2. Enumerate the different cutting tools for CNC machines. [U]
3. Sketch the specification chart of CNC machine. [Ap]

**C210.2: Prepare a part programming using canned cycles, subroutines and do loops. (Apply)**

1. Explain the basic concepts of part programming. [R]
2. Summarize the simple programming for rational components. [U]
3. Construct the part programming using canned cycles, subroutines and do loops for automatic tool changer. [Ap]

**C210.3: Analyze the difference between FMS, Group technology, CAD/CAM and CIM. (Analyze)**

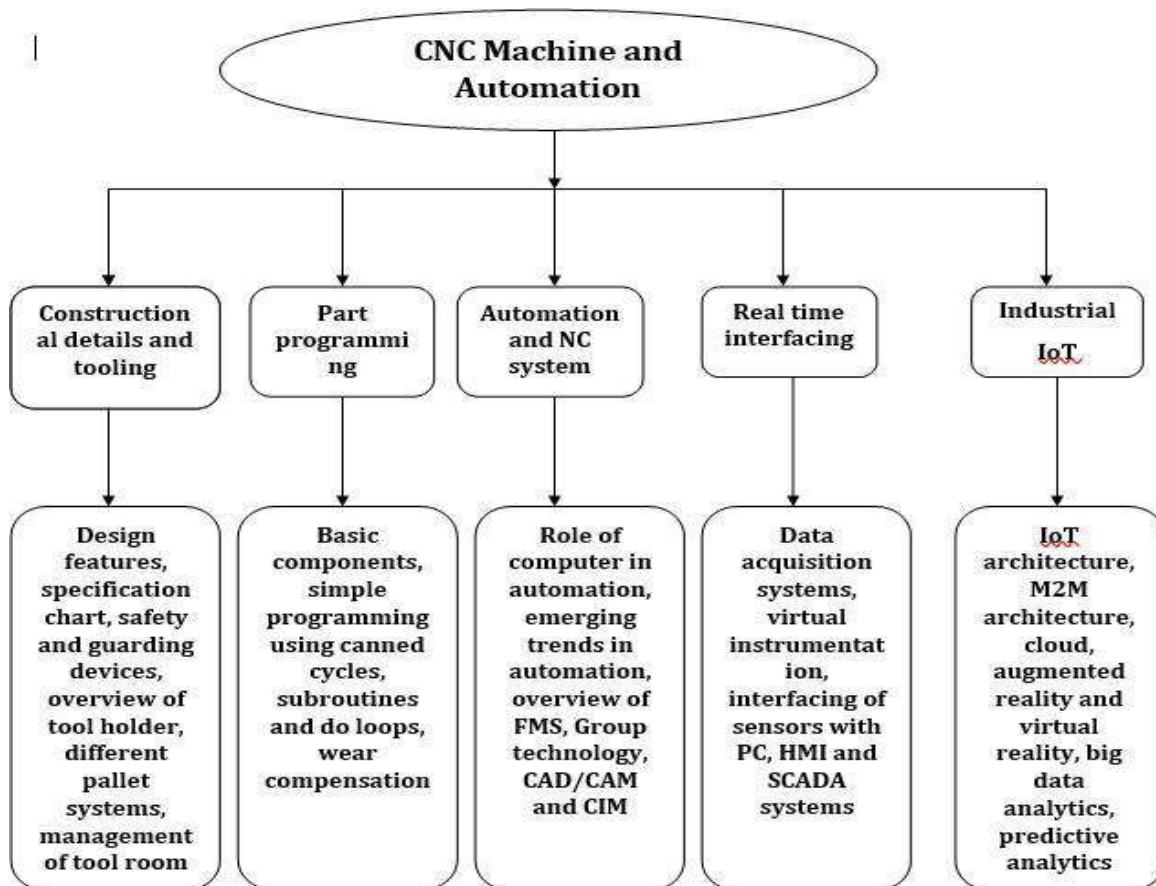

1. Mention the various FMS components. [R]
2. Enumerate the types of FMS in an automated industry. [U]
3. Compare and contrast FMS, Group technology and CAD/CAM. [Ap]

**C210.4: Complete the interfacing of sensors/actuators with PC, condition monitoring, adaptive control, HMI and SCADA systems - Apply**

1. Mention the components of data acquisition system. [R]
2. Paraphrase the interfacing procedure for sensors or actuators with PC. [U]
3. Sketch the adaptive control of automation system in a production system. [Ap]

**C210.5: Select the suitable IoT for automation - Analyze**

1. Describe the types of cloud in an Industrial IoT. [U]
2. Sketch the components of M2M architecture.[Ap]
3. Compare and contrast the AR and VR . [An]

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1 : Analyze the stresses in simple, compound bars, and thermal stresses (Analyze)**

1. Define a composite bar. How will you find the stresses and load carried by each member of a composite bar? (A)
2. Find an expression for the total elongation of a bar due to its own weight, when the bar is fixed at its upper end and hanging freely at the lower end.(An)

**COURSE OUTCOME 2 : Determine the effect of the two-dimensional stresses under various loading combinations on structural parts and thin cylinders. (Apply)**

1. Show that in thin cylinder shells subjected to internal fluid pressure, the circumferential stress is twice the longitudinal stress. (A)
2. While resigning cylindrical vessel, which stress should be used for calculating the thickness of the cylindrical vessel? (A)
3. Find the maximum shear stress in a plane using morhs circle and principal plane method. (A)

**COURSE OUTCOME 3 : Illustrate the deflection of shafts due to torsion and deformation of different types of springs (Apply)**

1. Find an expression for the strain energy stored by the close-coiled helical spring when subjected to axial load W. (A)

2. A solid shaft of 20 cm diameter is used to transmit torque. Find the maximum torque transmitted by the shaft if the maximum shear stress induced in the shaft is  $50 \text{ N/mm}^2$ . (A)

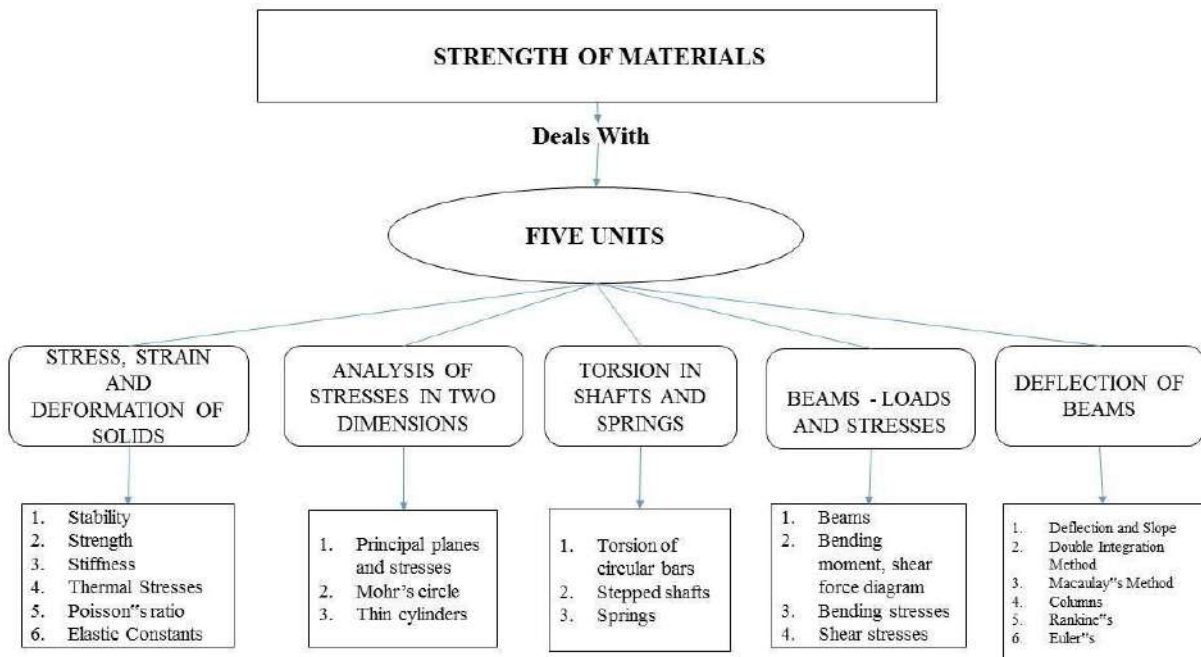

**COURSE OUTCOME 4 : Determine shear force, bending moment and stress distribution of various types of beams with different support (APPLY)**

1. How many points of contraflexure you will have for simply supported beam overhanging at one end only? (A)
2. Draw the shear force and bending moment diagrams for a simply supported beam of Length L which is subjected to a clockwise couple  $\mu$  at the centre of the beam. (A)

**COURSE OUTCOME 5 : Evaluate the deflection of beams and columns using various approaches (APPLY)**

1. Determine: (i) slope at the left support (ii) deflection under the load and (iii) maximum deflection of a SSB of length 5 m, which is carrying a point load 5 kN at a distance of 3 m from the left end. Take  $E = 2 \times 10^5 \text{ N/mm}^2$  and  $I = 1 \times 10^8 \text{ mm}^4$ . (A)
2. Calculate the safe load on a hollow cast iron (one end rigidly fixed and other hinged) of 15 cm external diameter, 10 cm internal diameter and 10 m in length. Use Euler's formula with a factor of safety of 5 and  $E = 95 \text{ kN/mm}^2$ . (A)

**CONCEPT MAP**

**ASSESSMENT QUESTIONS – SAMPLE**

**COURSE OUTCOME 1:** State and compare the processes and performances of different gas power cycles. (**Remember, Understand, Apply**)

1. Define Compression ratio
2. State the effect of increase in cut off ratio on the efficiency of Diesel Engine.
3. Determination of efficiency, work done, mean effective pressure of gas power cycle.(Numerical Problem)

**COURSE OUTCOME 2:** Explain the functioning and features of IC engines, components and auxiliaries and to calculate the performance parameters of IC Engines (**Remember, Understand, Apply**)

- 1.State the primary difference in two stroke and four stroke engine.
- 2.What is meant by value overlapping
- 3.Numerical problems to determine the performance parameters from the test data of an internal combustion engine.

**COURSE OUTCOME 3:** Calculate the velocity and design parameters in steam nozzles and to carry out performance analysis on steam turbines (**Remember, Understand, Apply**)

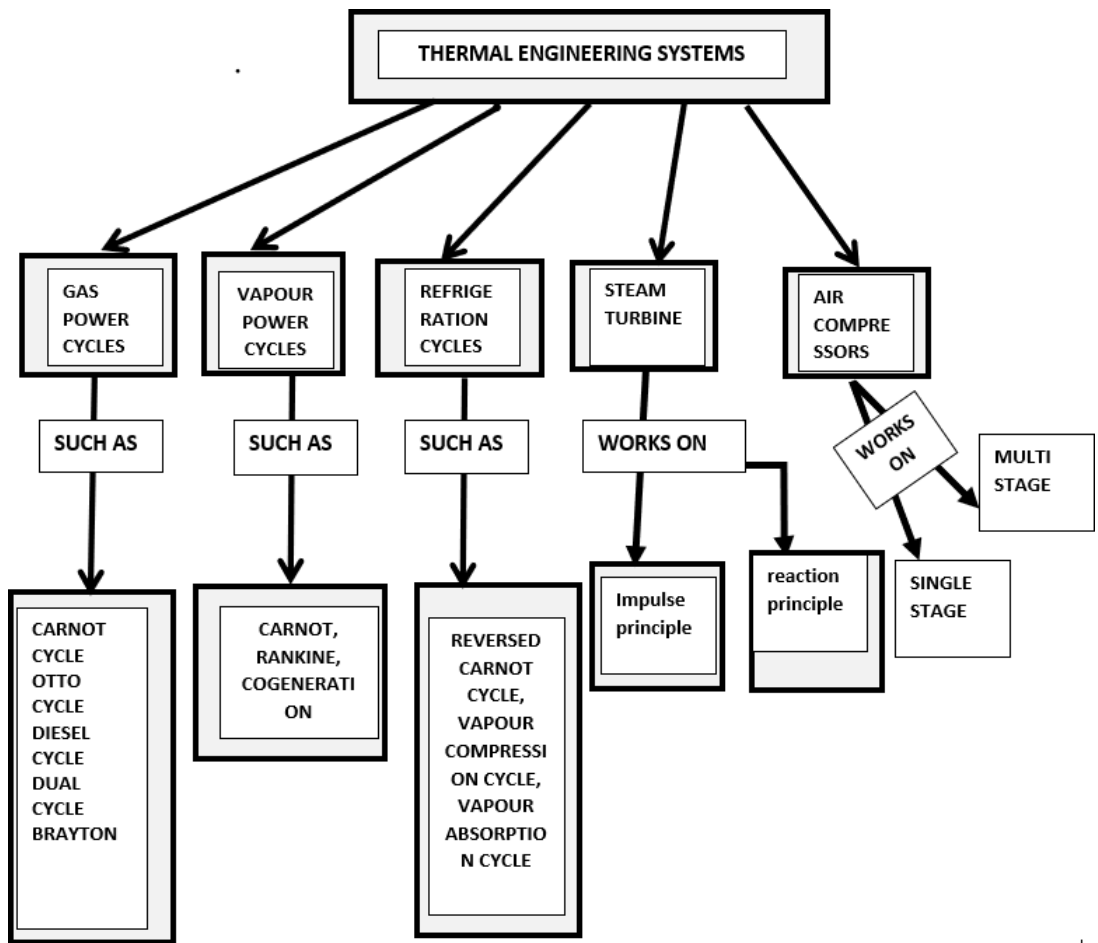

1. Define Critical Pressure ratio.
2. What is the effect of friction on the quality of steam?
3. Determination of area ratio or mass flow rate from the given steam condition.

**COURSE OUTCOME 4:** Understand the types and working of compressors and to solve problems in single stage and multi stage air. ( Remember, Understand, Apply)

1. Define isothermal efficiency of a reciprocating compressor.
2. Why clearance volume doesn't have any effect on the volumetric efficiency of an air compressor?
3. Calculation of the energy required to compress air for a given pressure ratio, stages and air outlet condition.

**COURSE OUTCOME 5:** Solve problems in refrigeration and air conditioning system ( Remember, Understand, Apply)

1. Define Ton of Refrigeration
2. What is the effect of super heat on the COP of a refrigerator
3. Numerical Calculation on determining the COP of refrigeration system for various cases.

### COURSE LEVEL ASSESSMENT QUESTIONS

**COURSE OUTCOME 1 ; Apply different mechanisms for designing machines and Compute velocity, acceleration of various planer mechanisms. (Apply)**

1. Determine the degree of freedom for following linkages. (A)

2. For the four-bar linkage shown below examine the acceleration of A and B and the angular acceleration of links 3 and 4, Crank 2 has a constant angular velocity,  $\omega_2 = 200$  rad/s counter clockwise direction. The linkage  $AO_2 = 150$  mm;  $BA = 450$  mm,  $BO_4 = 300$  mm,  $O_4O_2 = 200$  mm. (An)

**COURSE OUTCOME 2 : Apply the principles for analysing cams, gears and gear trains. (Apply)**

1. A cam operates on offset roller follower. The least radius of the cam is 50 mm, roller diameter is 30 mm, and offset is 20 mm, the cam rotates at 360 rpm. The angle of ascent is  $48^\circ$ , angle of dwell is  $42^\circ$  and angle of descent is  $60^\circ$ . The motion is to be SHM during ascent and uniform acceleration and deceleration during decent. Construct the cam profile. (A)

2. State and prove law of gearing and thus derive expression for velocity of sliding. **(A)**
3. An epicyclic gear train is shown in the below figure. How many revolutions do the arm makes? (a). When A makes one revolution in CW and D makes 1/2 revolution in the opposite sense, (b). When A makes one revolution in CW and D remains stationary, (c). The number of teeth in gears A and D are 40 and 90 respectively. **(An)**

**COURSE OUTCOME 3: Analyse dynamic forces acting on mechanism and Balance rotating and reciprocating masses (Analyse)**

1. List the uses of turning moment diagrams? **(R)**
2. A multi-cylinder engine is to run at a speed of 600 r.p.m. On drawing the turning moment diagram to a scale of 1mm=250 N-m and 1mm=30, the areas above and below the mean torque line in mm<sup>2</sup> are: +160, -172, +168, -191, +197, -162. The speed is to be kept within  $\pm 1\%$  of the mean speed of the engine. Calculate the necessary moment of inertia of the flywheel. Determine the suitable dimensions of a rectangular flywheel rim if the breadth is twice its thickness. The density of the cast iron is 7250 kg/m<sup>3</sup> and its hoop stress is 6 MPa. Assume that the rim contributes 92% of the flywheel effect. **(A)**
3. Four masses A, B, C and D revolve at equal radii and are equally spaced along a shaft. The mass B is 7 kg and the radii of C and D make angles of 90° and 240° respectively with the radius of B. Examine the magnitude of the masses A, C and D and the angular position of A so that the system may be completely balanced. **(An)**

**COURSE OUTCOME 4 : Analyse free, forced and damped vibrations of mechanical systems. (Analyse)**

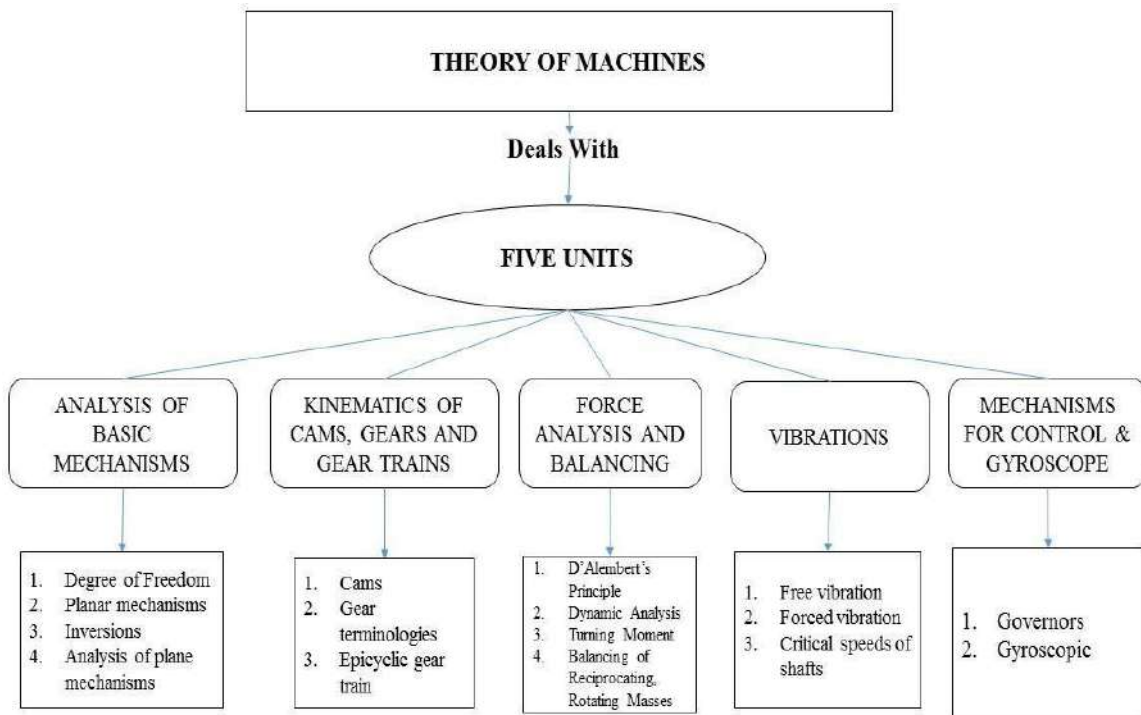

1. A machine of weighs 18 kg and is supported on springs and dashpots. The total stiffness of the springs is 12 N/mm and damping is 0.2 N/mm/s the system is initially at rest and a velocity of 120 mm/s is imparted to the mass. Determine (1) the displacement and velocity of mass as a function of time (2) the displacement and velocity after 0.4s. (b) Describe the types of vibrations with simple sketch. **(A)**
2. A shaft of 100 mm diameter and 1 m long is fixed at one end and other end carries a flywheel of mass 1 tonne. Taking young's modulus for the shaft material as 200 GN/m<sup>2</sup>. Examine the natural frequency of longitudinal and transverse vibrations. **(An)**
3. A vertical shaft 25 mm diameter and 0.75 m long, is mounted in long bearings and carries a pulley of mass 10 kg midway between the bearings. The centre of the pulley is 0.5 mm from the axis of the shaft. Solve (a) the Whirling Speed (b) the bending stress in the shaft, when it is rotating at 1700 rpm. **(A)**

**COURSE OUTCOME 5: Analyse and characterize the effects of governor and gyroscopic effects on aeroplanes, ships. (Analyse)**

1. A ship is propelled by a turbine rotor which has a mass of 5 tonnes and a speed of 2100 rpm. The rotor has a radius of gyration of 0.5 m and rotates in a clockwise direction when viewed from the stern. Examine the gyroscopic effect in the following conditions: (i) the ship sails at a speed of 30 km/hr and steers to the left in curve having 60 m radius; (ii) the ship pitches  $6^\circ$  above and  $6^\circ$  below the horizontal position. The bow is descending with its maximum velocity. the motion due to pitching is simple harmonic and a periodic time is 20 seconds.(iii) the ship rolls and at a certain instant it has an angular velocity of 0.03 rad/sec clockwise when viewed from stern. **(An)**
2. In a spring controlled governor, the curve of the controlling force is a straight line. When balls are 400 mm apart, the controlling force is 1200 N and when 200 mm apart, the controlling force is 450 N.at what speed will the governor run when the balls are 250 mm apart? What initial tension on the spring would be required for isochronism and what would then be the speed? Take masses of each ball to be 10 kg. **(A)**
3. Define Stability of a governor. **(R)**

**CONCEPT MAP**

|                 |                                                  |          |          |          |          |

|                 |                                                  | <b>2</b> | <b>0</b> | <b>0</b> | <b>0</b> |

**Preamble**

To inculcate knowledge on the environment and all sorts of biotic and abiotic components related to its ecosystem, climate changes and challenges faced due to global warming and the importance of renewable sources of energy. Inspire students to find ways in contributing personally and professionally thereby rectifying environmental and social problems.

**Prerequisites for the course**

- . Basic theoretical concepts of biological science in higher secondary level.
- . Basic theoretical concepts of Engineering Chemistry.

**Objectives**

- To make the students conversant with the interdisciplinary and holistic nature of the environment.
- To make the students understand the impacts of environmental degradation and to minimise vulnerability to future disasters.
- To enrich the students with the significance of natural resources and environment on the quality of life.
- To have an increased awareness among students to create a quest on issues in areas of sustainability.
- To have a thorough understanding of the concepts of sustainable habitat.

|               |                                                 |          |
|---------------|-------------------------------------------------|----------|
| <b>UNIT I</b> | <b>ENVIRONMENT, ECOSYSTEMS AND BIODIVERSITY</b> | <b>7</b> |
|---------------|-------------------------------------------------|----------|

Environment: Definition, Scope and Importance of environment studies. Ecosystem: Structure and function of an ecosystem - Producers - Consumers – Decomposers- Types – Characteristic features: Forest ecosystem - Desert ecosystem - Pond ecosystem-Ocean ecosystem.

Biodiversity - Value of biodiversity - Hot-spots of biodiversity- Threats to biodiversity - Endangered and Endemic species - Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

Field study of common plants, insects, birds; Field study of simple ecosystems – pond, river, hill slopes, etc.

|                |                                                          |          |
|----------------|----------------------------------------------------------|----------|
| <b>UNIT II</b> | <b>ENVIRONMENTAL POLLUTION &amp; DISASTER MANAGEMENT</b> | <b>6</b> |
|----------------|----------------------------------------------------------|----------|

Pollution: Definition - Causes - Effects - Control measures of air pollution - Water pollution: (Sewage water treatment by activated sludge and trickling filter process) - Marine pollution - Noise pollution.

Disaster management: Causes - Effects - Control measures of Floods - Earthquake - Cyclone.

Field study of local polluted sites – Urban / Rural / Industrial / Agricultural.

|                 |                          |          |
|-----------------|--------------------------|----------|
| <b>UNIT III</b> | <b>NATURAL RESOURCES</b> | <b>6</b> |
|-----------------|--------------------------|----------|

Forest resources: Use - Overexploitation - Deforestation - case studies. Water resources: Use - Overutilization of surface and groundwater - Water conservation: Rainwater harvesting- Conflicts over water. Mineral resources: Use - Exploitation -Environmental effects of extracting and using

mineral resources - Case studies. Food resources: Effects of Modern Agriculture - Fertilizer-Pesticide problems (Eutrophication, Blue baby syndrome, Biomagnification) - Water logging - Salinity - case studies. Energy resources: Renewable (Solar, Wind) - Non renewable energy sources.

|                |                       |          |
|----------------|-----------------------|----------|
| <b>UNIT IV</b> | <b>SUSTAINABILITY</b> | <b>6</b> |
|----------------|-----------------------|----------|

Introduction, Need and concept of sustainability, Social- Environmental and Economic Sustainability Concepts, Sustainable Development, Challenges for Sustainable Development. Environmental legislations in India - Water Act, Air Act.

|               |                            |          |
|---------------|----------------------------|----------|
| <b>UNIT V</b> | <b>SUSTAINABLE HABITAT</b> | <b>5</b> |
|---------------|----------------------------|----------|

Basic concepts of sustainable habitat, Environment Impact Assessment (EIA) - Procedures of EIA in India, Green Engineering, Social and technological change, Industrial Processes: Pollution Prevention, Industrial Ecology.

|                      |  |           |
|----------------------|--|-----------|
| <b>Total Periods</b> |  | <b>30</b> |
|----------------------|--|-----------|

### Suggestive Assessment Methods

| <b>Continuous Assessment Test</b><br><b>(100 Marks)</b> | <b>Formative Assessment Test</b> | <b>End Semester Exams</b> |
|---------------------------------------------------------|----------------------------------|---------------------------|
| WRITTEN TEST<br>CAT 1 50 MARKS AND<br>CAT 2 50 MARKS    | NA                               | NA                        |

### Outcomes

Upon completion of the course, the students will be able to:

|          |                                                                                                        |
|----------|--------------------------------------------------------------------------------------------------------|
| <b>1</b> | Extract the knowledge on the interdisciplinary and holistic nature of the environment.<br>(Understand) |
| <b>2</b> | Discover the problems related to environmental degradation. (Apply)                                    |
| <b>3</b> | Sketch the significance of natural resources on the quality of life. (Apply)                           |
| <b>4</b> | Solve the issues in areas of sustainability. (Apply)                                                   |
| <b>5</b> | Articulate knowledge on the concepts of sustainable habitat (Apply)                                    |

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1 Students will be able to demonstrate the knowledge on the interdisciplinary and holistic nature of the environment. (Remember)**

1. Describe the Multidisciplinary nature of Tirunelveli District.
2. Demonstrate the regulation of Ecosystem

**COURSE OUTCOME 2: Students will be able to identify the problems related to environmental degradation. (Understand)**

1. Demonstrate the control measures of Air and water Pollution
2. Account the problem and suitable remedial measures for floods in the rainy season.

**COURSE OUTCOME 3: Students will be able to understand the significance of natural resources on the quality of life. (Understand)**

1. Highlight the control and effects of deforestation.
2. Label the role of individual in conservation of natural resources

**COURSE OUTCOME 4: Students will be able to identify the issues in areas of sustainability. (Remember)**

1. Outline the term "sustainable development"
2. Compare the major limitations of the Air act, 1972 and Water act, 1980.

**COURSE OUTCOME 5: Students will be able to acquire knowledge on the concepts of sustainable habitat. (Remember)**

1. Narrate the concept and procedure for Environment Impact Assessment.  
Elucidate the prevention of pollution from various industries.

**COURSE LEVEL ASSESSMENT QUESTIONS**

**Course Outcome 1 Describe the concepts of measurements to apply in various metrological instruments. – (Remember, Understand)**

1. What are the factors affecting the measuring system?(R)
2. What is the difference between allowance and tolerance?(U)
3. Explain the classification of various measuring methods. (U)

**Course Outcome 2 : Outline the principles of linear and angular measurement tools used for industrial applications - (Remember, Understand )**

1. Give a brief note on slip gauges and what are the safety precaution to be followed in the use of slip gauge blocks and also explain the type of limit gauge with neat sketches (U)
2. Explain the working principle of SINE BAR. (U)
3. Explain the classification of linear measuring instruments. (U)

**Course Outcome 3 : Explain the principles of comparators and geometrical measurement tools used for industrial applications. (Remember, Understand)**

1. Define straightness of a line in two planes (U)
2. List out the reasons for the occurrence of progressive errors in screw threads.(U)
3. Explain the various methods by which roundness is measured. (U)

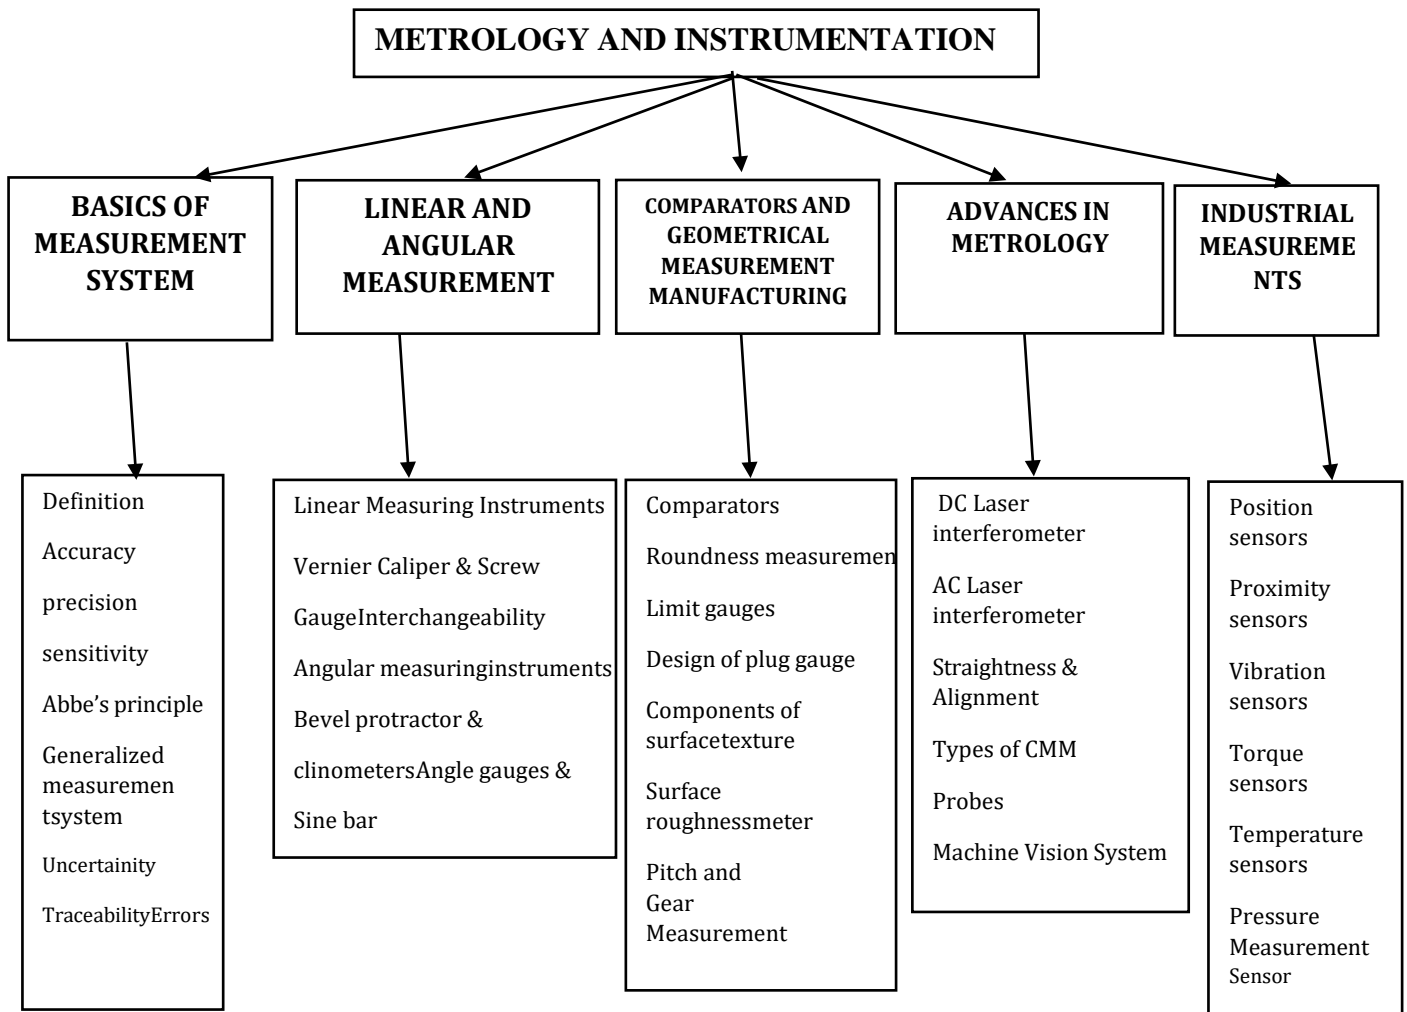

**Course Outcome 4 Discuss advance measuring techniques of mechanical properties in industrial applications (Remember, Understand)**

1. Explain the working principle of DC Laser interferometer with neat diagram.(U)
2. With a neat sketch explain the dimensional measurements using laser gauge.(U)
3. Discuss the need, types and constructional features of coordinate measuring machine.(U)

**Course Outcome 5 :Discuss various measuring instruments for measuring the industrial components. (Remember, Understand )**

1. Explain the method of measuring force using strain gauge load cell. (U)
2. With neat sketch explain how metallic strips are used for temperature measurements. (U)
3. Explain with neat diagram the purpose and operating principle of a venturi meter. (U)

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                           |          |                                          |          |               |

| <p><b>Upon completion of the course, the students will be able to:</b></p> <p>C217.1: Draw the valve timing and port diagram using four stroke and two stroke engine model</p> <p>C217.2: Evaluate the performance of IC engine with various type of loading</p> <p>C217.3 : Determine the thermal properties of fuels and lubricants</p> <p>C217.4 : Conduct test to evaluate the performance of steam generator and turbine</p> <p>C217.5 : Conduct test to evaluate the performance of reciprocating air compressor</p> <p>C217.6 : Determine the performance of refrigeration system and also explain the various psychrometric properties.</p> |                                                                           |          |                                          |          |               |

**Laboratory Requirements**

- I.C Engine – 2 stroke and 4 stroke model
- 4-stroke Diesel Engine with mechanical loading
- 4-stroke Diesel Engine with hydraulic loading
- 4-stroke Diesel Engine with electrical loading
- Multi-cylinder Petrol Engine
- Apparatus for Flash and Fire Point
- Steam Boiler with turbine setup
- Single/two stage reciprocating air compressor
- Refrigeration test rig
- Air-conditioning test rig

**Prerequisites for the course****Strength of materials****Objectives**

- Determine experimental data include universal testing machines and torsion equipment.
- Determine experimental data for spring testing machine, compression testing machine, impact tester, hardness tester.
- Determine deflection of a beam.

| 13   | Compression test on helical springs                                                           | C218.5 |
| 14   | Microscopic Examination of<br>(i) Hardened samples and<br>(ii) Hardened and tempered samples. | C218.5 |

**Total Periods : 45****Suggestive Assessment Methods****Lab Components Assessments  
(60 Marks)**EXPERIMENTATION –40 Marks  
Model Exam with project – 20 Marks**End Semester Exams  
(40 Marks)****Practical Exam****Course Outcomes****Upon completion of the course, the students will be able to:****C218.1.** Compute impact strength for given specimen**C218.2.** Compute shear strength for given specimen**C218.3.** Examine the hardness for various metal specimen**C218.4.** Conduct performance study for Mechanical Properties and Performance of Materials such as tensile , compression strength**C218. 5.** Examine the Mechanical Properties for beams, springs and tempered.

**Laboratory Requirements**

1. Universal Tensile Testing machine with double shear attachment - 40 Ton Capacity -1 No
2. Torsion Testing Machine (60 NM Capacity) - 1 Nos
3. Impact Testing Machine (300 J Capacity) - 1 Nos
4. Brinell Hardness Testing Machine - 1 Nos
5. Rockwell Hardness Testing Machine - 1 Nos
6. Spring Testing Machine for tensile and compressive loads (2500 N) - 1 Nos
7. Metallurgical Microscopes - 3 Nos
8. Muffle Furnace (800 °C) - 1 Nos
9. Deflection of beams - 1 Nos

**Suggestive Assessment Methods****Lab Components Assessments  
(60 Marks)**

EXPERIMENTATION –40 Marks  
Model Exam with project – 20 Marks

**End Semester Exams  
(40 Marks)****Practical Exam****Outcomes****Upon completion of the course, the students will be able to:**

- C219.1.** Explain gear parameters, kinematics of mechanisms in various Mechanisms.  
**C219.2.** Determine mass moment of inertia for axisymmetric bodies and mechanical elements.  
**C219.3.** Conduct performance study for stability control mechanisms like governor and motorised gyroscope and to study cam jump phenomenon  
**C219.4.** Compute frequency for free vibration, damping coefficient and transmissibility ratio.  
**C219.5.** Compute torsional frequency, critical speeds of shafts, balancing mass of rotating and reciprocating masses.

**Laboratory Requirements**

Cam follower setup  
 Motorised gyroscope.  
 Governor apparatus - Hartnell governors.  
 Whirling of shaft apparatus  
 Dynamic balancing machine.  
 Torsional Vibration of single rotor and two rotor system setup.  
 Spring mass vibration system.  
 Turn table apparatus.  
 Compound pendulum setup  
 Transverse vibration setup of a) cantilever  
 Gear Models  
 Kinematic Models to study various mechanisms.

## **COURSE LEVEL ASSESSMENT QUESTIONS**

### **COURSE OUTCOME 1: Apply heat conduction equations to different surface configurations under steady state and transient conditions to solve problems (Apply)**

1. Define Fourier's Law of conduction (R)
2. State few practical examples for transient heat conduction (U)
3. A long rod is exposed to air at 298°C. It is heated at one end. At steady state conditions, the temperatures at two points along the rod separated by 120 mm are found to be 130°C and 110°C respectively. The diameter of the rod is 25 mm OD and its thermal conductivity is 116 W/m°C. Calculate the heat transfer coefficient at the surface of the rod and also the heat transfer rate. (A)

### **COURSE OUTCOME 2: Apply free and forced convective heat transfer correlations to internal and external flows through/over various surface configurations and solve problems. (Apply)**

1. Define Newton's Law of cooling (R)
2. Differentiate viscous sub layer and buffer layer (U)
3. Air at 27°C and 1 atmospheric pressure flow over a flat plate at a speed of 2 m/s. Calculate boundary layer thickness at distance 40 cm from leading edge of the plate (A)

### **COURSE OUTCOME 3: Explain the phenomena of boiling and condensation, apply LMTD and NTU methods of thermal analysis to different types of heat exchanger configurations and solve problems. (Apply)**

1. Define LMTD (R)
2. Distinguish pool boiling from forced convection boiling (U)
3. Sketch and plot the LMTD distribution graph for condensers & evaporators (A)

### **COURSE OUTCOME 4: Explain basic laws for radiation and apply these principles to radiative heat transfer between different types of surfaces to solve problems. (Apply)**

1. Define Planck's distribution law (R)
2. What are the required radiation properties of materials used as radiation Shield (U)
3. Calculate the maximum emissive power for an industrial furnace in the form of black body and emitting radiation at 2500°C (A)

### **COURSE OUTCOME 5: Apply diffusive and convective mass transfer equations and correlations to solve mass transfer problems (Apply)**

1. Define Molar concentration (R)
2. Indicate the heat and mass transfer analogy (U)
3. Air at 1 atm and 25°C containing small quantities of iodine, flows with a velocity of 6.2 m/s inside a 35 mm diameter tube. Calculate the mass transfer coefficient for iodine. The thermo physical properties of air are:  $\nu = 15.5 \times 10^{-6} \text{ m}^2/\text{s}$ ;  $D = 0.82 \times 10^{-5} \text{ m}^2/\text{s}$  (A)

**COURSE OUTCOME 1: Apply the concepts of Design of simple machine elements subjected to static and fatigue Loading. (Apply)**

1. An overhang crank with pin and shaft is shown in figure. A tangential load of 15 kN acts on the crank pin. Determine the maximum principal stress and the maximum shear stress at the centre of the crankshaft bearing.(A)

2. Determine the diameter of a circular rod made of ductile material with a fatigue strength (complete stress reversal),  $\sigma_{-1} = 265$  MPa and a tensile yield strength of 350 MPa. The member is subjected to a varying axial load from  $W_{\min} = -300 \times 10^3$  N to  $W_{\max} = 700 \times 10^3$  N and has a stress concentration factor = 1.8. Use factor of safety as 2.0.(A)
3. The load on a bolt consists of an axial pull of 10 kN together with a transverse Shear force of 5 kN. Find the diameter of bolt required according to,  
(A)
  - Maximum principal stress theory.
  - Maximum shear stress theory.
  - Maximum principal strain theory.
  - Maximum strain energy theory.
  - Maximum distortion energy theory.

**COURSE OUTCOME 2: Apply the concepts of Design of shafts, keys and couplings under different loading conditions for mechanical applications (Apply)**

1. A hollow shaft of 0.5 m outside diameter and 0.3 m inside diameter is used to drive a propeller of a marine vessel. The shaft is mounted on bearings 6 metre apart and it transmits 5600 kW at 150 r.p.m. The maximum axial propeller thrust is 500 kN and the shaft weighs 70 kN. Determine: The maximum shear stress developed in the shaft, and the angular twist between the bearings. (A)
2. Design a bushed-pin type flexible coupling for connecting a motor shaft to a pump shaft for the following service conditions: Power to be transmitted = 40 kW; speed of the motor shaft = 1000 r.p.m.; diameter of the motor shaft = 50 mm; diameter of the pump shaft = 45 mm. The bearing pressure in the rubber bush and allowable stress in the pins are to be limited to 0.45 N/mm<sup>2</sup> and 25 MPa respectively.(A)
3. Design a shaft and flange for a Diesel engine in which protected type of flange coupling is to be adopted for power transmission. The following data is available for design: Power of engine = 75 kW; speed of engine = 200 r.p.m.; maximum permissible stress in shaft = 40 MPa; maximum permissible twist in shaft = 1° in length of shaft equal to 30 times the diameter of shaft; maximum torque = 1.25 × mean torque; pitch circle diameter of bolts = 3 × diameter of shaft; maximum permissible stress in bolts = 20 MPa.

Find out: 1. Diameter of shaft, 2. number of bolts, and 3. diameter of bolts. (A)

**COURSE OUTCOME 3: Apply the concepts of Design of welded joints, riveted joints and threaded joints subjected to different loading conditions (Apply)**

1. A rectangular steel plate is welded as a cantilever to a vertical column and supports a single concentrated load  $P$ , as shown in Figure. Determine the weld size if shear stress in the same is not to exceed 140 MPa. (A)

2. A steam engine cylinder of size 300 mm  $\times$  400 mm operates at 1.5 N/mm<sup>2</sup> pressure. The cylinder head is connected by means of 8 bolts having yield point stress of 350 MPa and endurance limit of 240 MPa. The bolts are tightened with an initial preload of 1.8 times the steam load. The joint is made leak-proof by using soft copper gasket which renders the effect of external load to be half. Determine the size of bolts, if factor of safety is 2 and stress concentration factor is 3. (A)

3. A pressure vessel has an internal diameter of 1 m and is to be subjected to an internal pressure of 2.75 N/mm<sup>2</sup> above the atmospheric pressure. Considering it as a thin cylinder and assuming efficiency of its riveted joint to be 79%, calculate the plate thickness if the tensile stress in the material is not to exceed 88 MPa. Design a longitudinal double riveted double strap butt joint with equal straps for this vessel. The pitch of the rivets in the outer row is to be double the pitch in the inner row and zig-zag riveting is proposed. The maximum allowable shear stress in the rivets is 64 MPa. You may assume that the rivets in double shear are 1.8 times stronger than in single shear and the joint does not fail by crushing. Make a sketch of the joint showing all calculated values. Calculate the efficiency of the joint. (A)

**COURSE OUTCOME 4: Apply the concepts of Design of helical coil springs, leaf springs and flywheels for mechanical applications (Apply)**

1. Design a close coiled helical compression spring for a service load ranging from 2250 N to 2750 N. The axial deflection of the spring for the load range is 6 mm. Assume a spring index of 5. The permissible shear stress intensity is 420 MPa and modulus of rigidity,  $G = 84 \text{ kN/mm}^2$ . Neglect the effect of stress concentration. (A)
2. A truck spring has 12 numbers of leaves, two of which are full length leaves. The spring supports are 1.05 m apart and the central band is 85 mm wide. The central load is to be 5.4 kN with a permissible stress of 280 MPa. Determine the thickness and width of the steel spring leaves. The ratio of the total depth to the width of the spring is 3. Also determine the deflection of the spring. (A)
3. A multi-cylinder engine is to run at a speed of 500 r.p.m. On drawing the crank effort diagram to scale 1 mm = 2500 N-m and 1 mm = 3°, the areas above and below the mean

torque line is in mm<sup>2</sup> as below: + 160, - 172, + 168, - 191, + 197, - 162. The speed is to be kept within  $\pm 1\%$  of the mean speed of the engine. Design a suitable rim type C.I. flywheel for the above engine. Assume rim width as twice the thickness and the overhang of the flywheel from the centre of the nearest bearing as 1.2 metres. The permissible stresses for the rim in tension are 6 MPa and those for shaft and key in shear are 42 MPa. The allowable stress for the arm is 14 MPa. (A)

**COURSE OUTCOME 5: Apply the concepts of Design of piston, connecting rod and crank shaft for an automobile engine and sliding contact bearings and anti-friction bearings. (Apply)**

1. Determine the dimensions of an I-section connecting rod for a petrol engine from the following data: Diameter of the piston = 110 mm; Mass of the reciprocating parts = 2 kg; Length of the connecting rod from centre to centre = 325 mm; Stroke length = 150 mm; R.P.M. = 1500 with possible over speed of 2500; Compression ratio = 4: 1; Maximum explosion pressure = 2.5 N/mm<sup>2</sup>. (A)
2. Design a side crankshaft for a 500 mm  $\times$  600 mm gas engine. The weight of the flywheel is 80 kN and the explosion pressure is 2.5 N/mm<sup>2</sup>. The gas pressure at maximum torque is 0.9 N/mm<sup>2</sup> when the crank angle is 30°. The connecting rod is 4.5 times the crank radius. (A)
3. Design a cast iron piston for a single acting four stroke engine for the following data: Cylinder bore = 100 mm; Stroke = 125 mm; Maximum gas pressure = 5 N/mm<sup>2</sup>; Indicated mean effective pressure = 0.75 N/mm<sup>2</sup>; Mechanical efficiency = 80% ; Fuel consumption = 0.15 kg per brake power per hour ; Higher calorific value of fuel = 42  $\times$  10<sup>3</sup> kJ/kg ; Speed = 2000 r.p.m. Any other data required for the design may be assumed. (A)
4. Design a suitable journal bearing for a centrifugal pump from the following available data: Load on the bearing = 13.5 kN; Diameter of the journal = 80 mm; Speed = 1440 r.p.m.; Bearing characteristic number at the working temperature (75°C) = 30 ; Permissible bearing pressure intensity = 0.7 N/mm<sup>2</sup> to 1.4 N/mm<sup>2</sup>; Average atmospheric temperature = 30°C. Calculate the cooling requirements, if any. (A)
5. A ball bearing subjected to a radial load of 4000 N is expected to have a satisfactory life of 12 000 hours at 720 r.p.m. with a reliability of 95%. Calculate the dynamic load carrying capacity of the bearing, so that it can be selected from manufacturer's catalogue based on 90% reliability. If there are four such bearings each with a reliability of 95% in a system, what is the reliability of the complete system? (A)

#### COURSE LEVEL QUESTIONS

**1.COURSE OUTCOME 1:** Recognize the various parts of the automobile and their functions and materials (**Remember**)

1. List major types of automobiles according to the fuel used. (R)
2. Point out the stresses to which the frame members are subjected to? (R)

**2.COURSE OUTCOME 2:** Describe the engine auxiliary systems and engine emission control (**Understand**)

- 1.Explain with a sketch the working of a Unit injector system (Understand)
- 2.Describe the construction and operation of a Simple Carburetor.(Understand)

**3.COURSE OUTCOME 3:** Distinguish the working of different types of transmission systems (**Apply**)

- 1.Illustrate how does the front axle differ from a rear axle. Explain with sketches. (Apply)

2. Compare hydraulic, mechanical, electrical and vacuum method of operating clutches (Understand)

**4. COURSE OUTCOME 4:** Enumerate the Steering, Brakes and Suspension Systems (**Apply**)

1. Explain the principle of operation of a power steering system with a neat sketch. (Understand)
2. Examine the operation of antilock braking systems. (Apply)

**5. COURSE OUTCOME 5:** Predict possible alternate sources of energy for IC Engines (**Understand**)

1. Explain the reasons for using alternate fuels in IC Engines. (Understand)
2. Explain the two methods by which hydrogen can be used in IC engine. (Understand)

### **COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1** Interpret the interdisciplinary applications of Electronics, Electrical, Mechanical, Computer and fluid systems **(Apply)**

1. Explain the working principles of stepper motor. (U)
2. Is Washing machine working under a closed loop System? Justify your answer (A)

**COURSE OUTCOME 2:** Explore the architecture of Microprocessor, Microcontroller and programming for simple applications. **(Apply)**

1. Explain the instruction set of 8085 Microprocessor (Understand)
2. Explain how 8051 microcontrollers can be used to display a four-digit number in seven segment LEDs with minimum power (Apply)

**COURSE OUTCOME 3:** Utilize the application of programmable logic controllers and SCADA to the industries. **(Apply)**

1. Create a ladder diagram for the following application:  
A pneumatic system with double solenoid valve controls two double acting cylinders A and B. The sequence of cylinder operations are as follows: Cylinder A extends followed by cylinder B extending, then cylinder B retracts and finally the cycle is

completed by the cylinder A retracting. Explain the logic of the PLC circuit used (Apply)

2. Draw the ladder diagram and PLC program for the following logic gate.

a) AND b) OR c) NAND d) NOT e) XOR (f) XNOR (Remember)

**COURSE OUTCOME 4:** Explain the basic concepts of IoT (Apply)

1. With Suitable example, explain in detail about IoT levels and deployment templates.

(Apply)

2. Discuss the steps involved in IoT design methodology (Understand)

**COURSE OUTCOME 5:** Apply engineering design of automation to assembly, inspection and monitoring process. (Apply)

1. Develop an automation system for a pick and place robot (Apply)

2. Mention the applications of IoT in health care domain (Understand)

| <b>Upon completion of the course, the students will be able to:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                               |                                      |   |   |   |
| 1. Analyse and interpret heat transfer parameters by conducting experiments on conduction experimental setups.<br>2. Analyse and interpret heat transfer parameters by conducting experiments on natural and forced convection apparatus.<br>3. Analyse and interpret heat transfer parameters by conducting experiments on radiation apparatus.<br>4. Analyse and interpret heat transfer parameters by conducting experiments on heat exchanger test setups and Study of boiling & condensation. |                                                                                               |                                      |   |   |   |

5. Analyse and interpret heat transfer parameters by conducting experiments on a Fluidized Bed Cooling Tower & Study of Mass Transfer

### Laboratory Requirements

(Requirements for a batch of 30students)  
Heat and Mass Transfer Laboratory

| S.No. | Description of Equipment                            | Quantity Required (R) |
|-------|-----------------------------------------------------|-----------------------|
| 1.    | Guarded plate apparatus                             | 1                     |
| 2.    | Lagged pipe apparatus                               | 1                     |
| 3.    | Natural convection-vertical cylinder apparatus      | 1                     |
| 4.    | Forced convection inside tube apparatus             | 1                     |
| 5.    | Composite wall apparatus                            | 1                     |
| 6.    | Thermal conductivity of insulating powder apparatus | 1                     |
| 7.    | Pin-fin apparatus                                   | 1                     |
| 8.    | Stefan-Boltzmann apparatus                          | 1                     |
| 9.    | Emissivity measurement apparatus                    | 1                     |
| 10.   | Parallel/counter flow heat exchanger apparatus      | 1                     |
| 11    | Fluidized Bed Cooling Tower                         | 1                     |
| 12    | Flat Plate Solar Collector                          | 1                     |

### Course Outcomes

**Upon completion of the course, the students will be able to:**

- CO1: Interpret the fundamentals of the Computer Aided Design which will equip them to pursue higher studies  
 CO2: Illustrate any solid part modelling by using modelling software package  
 CO3: Write the part programming of CNC milling  
 CO4: Write the part programming of CNC lathe  
 CO5: Interpret the fundamentals of EDM, wire-cut and Rapid prototyping and tooling

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1:** Interpret basic concepts, selection and design of power transmission systems such as flat belt, V belt drives & Pulleys and chain drives. **(Apply)**

1. Design a flat belt drive for a fan running at 360rpm which is driven by a 10 KW at 1440 rpm motor. The belt drive is open type and the distance between the pulley Centres is 2000 mm. The diameter of a driven pulley is 1 m. (A)
2. Design a V-belt drive to transmit 10kW at 400 rpm. The speed ratio is 3. Centre distance between the pulleys is 600 mm and the drive is crusher. (A)
3. A truck equipped with 9.5 KW engine uses a roller chain of the final drive to the rear axle. The driving sprocket runs at 900 rpm and driven sprocket at 400 rpm with a center distance of approximately 600 mm. select a suitable the roller chain. (A)

**COURSE OUTCOME 2:** Calculate power transmission between parallel shaft and design spur & helical gears. **(Apply)**

1. Design a pair of straight spur gear drive for a stone crusher, the gears are made of C40 steel. The pinion is to transmit 30 KW at 1200 rpm. The gear ratio is 3. The gear is to work 8 hours/day 6days in a week for 3 years. (A)
2. A helical gear with 30-degree helix angle has to transmit 35kW at 1500 rpm with a speed reduction ratio 2.5. If the pinion has 24 teeth determine the necessary module, pitch diameter and face width for 20-degree full depth teeth. Assume 15Ni 2Cr 1 Mo15 material for both pinion and wheel. (A)
3. For intermittent duty of an elevator, two cylindrical gears made of alloys steel 40 Ni 2 Cr 1 Mo 28 and have to transmit 12.5 kw at a pinion speed of 1200 rpm. Design a gear pair for the following specifications: Gear ratio: 3.5, pressure angle 20°, involute full depth, helix angle 15°. Gears are expected to work 6 hrs a day for 10 years. Minimum number of teeth on pinion can be taken as 20 and IS quality 8. (A)

**COURSE OUTCOME 3:** Interpret transmission between intersecting shafts and design the bevel, worm and cross helical gears. **(Apply)**

1. Design a Bevel gear drive to transmit 4 KW. Speed ratio = 4. driving shaft speed 225 rpm. The drive is non-reversible. Assume a life of 25000 hours. (A)
2. Design a bevel gear to transmit 3.5 KW with driving shaft speed is 200 rpm. Speed ratio requires is 4. The drive is non- reversible. Pinion is made of steel and wheel made of CI. Assume a life of 25,000 Hrs. (A)
3. Design the worm gear drive and determine the power loss by heat generation of Hardened steel worm rotates at 1440 rpm and transmits 12 KW to a phosphor bronze gear with gear ratio of 16. (A)

**COURSE OUTCOME 4:** Prepare kinematic layout and structural arrangement of the gear boxes. **(Apply)**

1. Design a 9-speed gear box for the following data. Minimum speed: 180rpm, Maximum speed: 1800rpm. Using standard step ratio, draw the speed diagram, kinematic layout. Also find the number of teeth on each gear. (A)
2. Design 12 speed gear box for a minimum speed of 160 rpm and a maximum speed of 2000 rpm. The input speed of motor is 1600 rpm. Draw the speed diagram, kinematic diagram and indicate the number of teeth on each gear. (A)
3. In a milling machine, 18 different speeds in the range of 35 rpm and 650 rpm are required. Design a three-stage gear box with a standard step ratio. Sketch the layout of the gear box, indicating the number of teeth n each gear. The gear box receives 3.6 kW from an electric motor running at 1,440 rpm. Sketch also the speed diagram. (A)

**COURSE OUTCOME 5:** Design the clutches and brakes. **(Apply)**

1. A plate clutch with maximum diameter 60mm has maximum lining pressure of 0.35 MPa. The power to be transmitted at 400 rpm is 135 KW and  $\mu = 0.3$ . Find inside diameter and spring force required to engage the clutch. Springs with spring index 6 and material spring steel with safe shear stress 600 MPa are used. Find the diameters

if 6 spring are used. (A)

2. A multi disc wet clutch is to be designed for a machine tool driven by an electric motor of 12.5 KW running at 1440 rpm. Space restrictions limit the outside disc diameter to 100mm. Determine the appropriate value of inside diameter, total number of discs and clamping force. (A)
3. Design a differential band for a winch lifting a load of 20 KN through a steel wire rope wound around a barrel of 600 mm dm. The brake drum, keyed to barrel shaft is 800 mm diameter and the angle of lap of the band over the drum is about 240 degrees. Operating arms of the brake are 50 mm and 250 mm. The length of operating level is 1.6m. (A)

| 21ME6602                                                                                                                                                                                                                                                                                                                                                                                                                      | FINITE ELEMENT ANALYSIS                                    | L                                           | T | P                                    | C         |

**Course Outcomes**

**Upon completion of the course, the students will be able to:**

- CO1:** Apply one dimensional spar elements to solve field problems. **(Apply)**  
**CO2:** Exercise the one-dimensional beam elements to field problems. **(Apply)**  
**CO3:** Apply the two-dimensional elements to solve the field problems. **(Apply)**  
**CO4:** Explore the applications of one-dimensional elements to solve dynamics problems. **(Apply)**  
**CO5:** Analyze the applications of one-dimensional element for heat transfer and fluid flow problems **(Analyze)**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1:** Apply one dimensional spar elements to solve field problems.  
(Apply)

1. Explain the steps involved in finite element analysis. (U)
2. Consider a bar as shown in Fig. An axial load of 200kN is applied at point p. Take  $A_1=2400\text{mm}^2$ ,  $E_1=70 \times 10^9\text{N/mm}^2$ ,  $A_2=600\text{mm}^2$ ,  $E_2=200 \times 10^9\text{N/mm}^2$ . Calculate the following, (i) nodal displacement at point p, (ii) stress in each element (iii) reaction force (A)

**COURSE OUTCOME 2:** Exercise the one dimensional beam elements to field problems  
(Apply)

1. Analyze the beam shown in fig using FEM (A)

**COURSE OUTCOME 3:** Apply the two dimensional elements to solve the field problems  
(Apply)

1. Determine the stiffness matrix for the CST element shown in Fig. The co-ordinates are given in mm. Assume plane strain conditions.  $E=210\text{GPa}$ ,  $\nu=0.25$  and  $t=10\text{mm}$ . (A)

2. For the isoparametric quadrilateral element as shown in fig., the Cartesian co-ordinates of point P are (6,4). The loads 10kN and 12kN are acting in x and y direction on that point P. Evaluate the nodal forces. (A)

**COURSE OUTCOME 4:** Explore the applications of one dimensional elements to solve dynamics problems (Apply)

1. Determine the natural frequencies of transverse vibration for a beam fixed at both ends. The beam may be modelled by two elements, each of length L and cross-sectional area A. The use of symmetry boundary condition is optional. (A)

2. Set up the system of equations governing the free transverse vibrations of a simply supported beam modeled by two finite elements. Determine the natural frequency of the system. (A)

**COURSE OUTCOME 5:** Analyze the heat transfer and fluid flow problems using one dimensional elements (Analyze)

1. Analyse the one-dimensional flow through porous media over the section shown in the figure by using finite element method. (An)

2. Find the flow rates in each of the elements (pipes) in the network as shown in Figure 6.35. The diameters of the pipe are 10, 10, 10, 10, 10, 10, 12, 12, 12 mm, respectively. The lengths are 1,000, 1,000, 1,000, 1,000, 1,000, 1,000, 1,500, 1,500, 1,500 mm, respectively. The flow rates at each node out of the network are  $[+125, -25, -25, -25, -25, -25]$  cubic cm/min. The liquid flowing is water. If the pressure head at node 1 is 2 m expressed in terms of the height of liquid that is flowing, find the pressure heads, (H), at each of the remaining nodes and the flow rates in the pipe. The friction factor may be taken as 0.02.(A)

| <b>Preamble:</b><br>The course is designed with the purpose of helping students in developing a holistic perspective about life. It opens the space for the student to explore his/her role (value) in all aspects of living – as an individual, as a member of a family, as a part of the society and as a unit in nature.                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                              |          |   |   |   |
| <b>Prerequisites for the course</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                              |          |   |   |   |
| Nil                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                              |          |   |   |   |

| <ol style="list-style-type: none"> <li>Understanding the need, basic guidelines, content and process for Value Education</li> <li>Self-Exploration–what is it? - its content and process; ‘Natural Acceptance’ and Experiential Validation- as the mechanism for self-exploration</li> <li>Continuous Happiness and Prosperity- A look at basic Human Aspirations</li> <li>Right understanding, Relationship and Physical Facilities- the basic requirements for fulfillment of aspirations of every human being with their correct priority</li> <li>Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario</li> <li>Method to fulfill the above human aspirations: understanding and living in harmony at various levels</li> </ol> |                                                                                              |          |   |   |   |
| <b>Suggested Activities:</b><br>Include practice sessions to discuss natural acceptance in human being as the innate acceptance for living with responsibility (living in relationship, harmony and co-existence) rather than as arbitrariness in choice based on liking-disliking                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                              |          |   |   |   |
| <b>MODULE II</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Understanding Harmony in the Human Being - Harmony in Myself</b>                          | <b>9</b> |   |   |   |
| <ol style="list-style-type: none"> <li>Understanding human being as a co-existence of the sentient ‘I’ and the material ‘Body’</li> <li>Understanding the needs of Self (‘I’) and ‘Body’-Sukh and Suvidha (happiness and physical facility)</li> <li>Understanding the Body as an instrument of ‘I’ (I being the doer, seer and enjoyer)</li> <li>Understanding the characteristics and activities of ‘I’ and harmony in ‘I’</li> <li>Understanding the harmony of I with the Body: Sanyam(control) and Swasthya (Health); correct appraisal of Physical needs, meaning of Prosperity in detail</li> <li>Programs to ensure Sanyam and Swasthya</li> </ol>                                                                                                                    |                                                                                              |          |   |   |   |
| <b>Suggested Activities:</b><br>Include practice sessions to discuss the role others have played in making material goods available to me. Identifying from one’s own life. Differentiate between prosperity and accumulation. Discuss programs for ensuring health vs dealing with disease.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                              |          |   |   |   |
| <b>MODULE III</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>Understanding Harmony in the Family and Society- Harmony in Human-Human Relationship</b>  | <b>9</b> |   |   |   |

1. Understanding harmony in the Family- the basic unit of human interaction
2. Understanding values in human-human relationship; meaning of Nyaya (justice) and program for its fulfillment to ensure Ubhay-tripti (mutual happiness)
3. Trust (Vishwas) and Respect (Samman) as the foundational values of relationship
4. Understanding the meaning of Vishwas; Difference between intention and competence
5. Understanding the meaning of Samman (respect), Difference between respect and differentiation; the other salient values in relationship
6. Understanding the harmony in the society (society being an extension of family): Samadhan, Samridhi, Abhay, Sah-astitva (Resolution, Prosperity, fearlessness, co-existence) as comprehensive Human Goals

**Suggested Activities:**

Include practice sessions to reflect on relationships in family, hostel and institute as extended family, real life examples, teacher-student relationship, goal of education etc. Gratitude as a universal value in relationships. Discuss scenarios. Elicit examples from students' lives. Pay a visit to the old age home / orphanage / physically & mentally challenged asylum and support them in catering their needs to ensure mutual happiness

**MODULE IV****Understanding Harmony in the Nature and Existence -  
Whole existence as Coexistence****9**

1. Understanding the harmony in the Nature
2. Interconnectedness and mutual fulfillment among the four orders of nature- recyclability and self-regulation in nature
3. Understanding Existence as Coexistence (Sah-astitva) of mutually interacting units in all pervasive space
4. Holistic perception of harmony at all levels of existence

**Suggested Activities:**

Include practice sessions to discuss human beings as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology etc. Submit a video documentary highlighting the ways of humans creating an imbalance in nature and ways to prevent it.

**MODULE V****Implications of the above Holistic Understanding of  
Harmony on Professional Ethics****9**

1. Natural acceptance of human values
2. Definitiveness of Ethical Human Conduct
3. Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order
4. Competence in Professional Ethics:
  - a) Ability to utilize the professional competence for augmenting universal human order,
  - b) Ability to identify the scope and characteristics of people-friendly and eco-friendly production systems, technologies and management models
5. Case studies of typical holistic technologies, management models and production systems
6. Strategy for transition from the present state to Universal Human Order

**Suggested Activities:**

Include a presentation session on identifying human inventions that are non ecofriendly and brainstorming to come up with ecofriendly production systems or ecofriendly alternatives.

**Total Periods****45****Suggestive Assessment Method FAT (20 Marks)****ESE (60 Marks)**

**SUGGESTED COURSE LEVEL ASSESSMENT QUESTIONS:****COURSE OUTCOME 1 (CO 1) : Need, Basic Guidelines, Content and Process for Value Education**

- 1) Explain the process of value education.
- 2) Illustrate the content of value education.
- 3) What should be the content of value education to make it complete? How do values relate to our day to day living?
- 4) Explain the content of self – exploration?
- 5) “Mutual fulfilment in human relationships is something we want, we aspire for.” Explain
- 6) What is value education? Why is there a need for value education?
- 7) How does value education help in fulfilling one's aspirations?

- 8) What are the basic guidelines for value education?
- 9) Write a short note on the need for value education in today's scenario.
- 10) Values and skill complement each other. Elaborate.

**COURSE OUTCOME 2 (CO 2) : Understanding Harmony in the Human Being - Harmony in Myself**

- 1) Distinguish between Sukh and Suvidha in detail taking needs of yourself as an example
- 2) How can we ensure harmony in self ('I')?
- 3) The needs of the self are qualitative. Illustrate.
- 4) 'The need for physical facilities is temporary' – explain the meaning of this statement with any two examples.
- 5) Do you think that human beings are a sum-total of sentiments and physical aspects, the 'self' and the 'body'? Explain your answer using examples.
- 6) 'Human being is the co-existence of the Self and the Body' – elaborate on this statement.
- 7) Explain how activities in 'I' are continuous.
- 8) "I am the seer, doer and enjoyer. The body is my instrument" – Explain.
- 9) Explain the relation between the self and the body. What is the responsibility of the self towards the body?
- 10) Define Sanyam and Swasthya. How are they helpful in keeping harmony between self and body?

**COURSE OUTCOME 3 (CO 3) : Understanding Harmony in the Family and Society- Harmony in Human-Human Relationship**

- 1) Define trust. or How is 'trust' the foundation value of relationships?
- 2) Define 'affection'. or How does affection lead to harmony in the family?
- 3) How can you say that love is the complete value?
- 4) What is the meaning of justice in human relationships? How does it follow from family to world family?
- 5) 'Discrimination leads to acrimony in relationships'. Explain. What problems are created when we discriminate?
- 6) What values are necessary in human relationships? Explain each briefly.
- 7) What is the basis of 'respect' for a human being? Do you see that other human beings are also similar to you? Explain.
- 8) Explain the comprehensive human goal. How does fearlessness follow from right understanding and prosperity?
- 9) Critically examine the state of society today in terms of fulfillment of comprehensive human goals.
- 10) What is the comprehensive human goal? Explain how this is conducive to sustainable happiness and prosperity for all.

**COURSE OUTCOME 4 (CO 4) : Understanding Harmony in the Nature and Existence – Whole existence as Coexistence**

- 1) What is sanskaar? Explain its effects or the conformance of the human order.
- 2) Explain the harmony in nature

- 3) Define harmony in nature and how you will create it. Explain with examples.
- 4) What are the four orders of nature? Briefly explain them.
- 5) Present the difference and similarity between a human being and an animal. Give examples to support your answer.
- 6) "Other than human order, the three orders are mutually fulfilling to each other". Explain with examples.
- 7) 'Existence is coexistence'. Give your opinion.
- 8) How is the activity in human order different from that of animal and plant order?
- 9) Explain the concept of holistic perception of harmony in existence.
- 10) Explain how there is recyclability and self regulation in nature.

**COURSE OUTCOME 5 (CO 5) : Implications of the above Holistic Understanding of Harmony on Professional Ethics.**

- 1) How does right understanding provide the basis for ethical human conduct? Give two examples.
- 2) What is ethical human conduct? Explain in terms of values, policies and character with appropriate examples.
- 3) What do you understand about the definitiveness of ethical human conduct? Why is this definitiveness desirable?
- 4) Describe briefly the criteria for evaluation of holistic technology. Support your answer with an example.
- 5) Give a critical review of the current management models in the profession.
- 6) Elaborate on the meaning of swatwa (innateness), swatantrata (self organization) and swarajya (self expression). How are they related?
- 7) What do you mean by professional ethics?
- 8) What do you understand by competence in professional ethics? Give two examples of its implications in industry.
- 9) What are the implications of value based living at all four levels of living? Explain.
- 10) What is utility value and artistic value? How are both important in human life? Explain with example

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                     |                                  |   |   |           |

**Course Outcomes**

**Upon completion of the course, the students will be able to:**

**CO1:** Analyze the force, stress, deflection in mechanical components. **(Analyze)**

**CO2:** Modal analysis is performed on mechanical components. **(Analyze)**

**CO3:** Analyze thermal stress and heat transfer in mechanical components. **(Analyze)**

**CO4:** Analyze the vibration of mechanical components. **(Analyze)**

**CO5:** Analyze the fluid flow for mechanical components. **(Analyze)**

**Laboratory Requirements for a batch of 30 students**

Finite Element Analysis Software, Computers with necessary accessories.

Recommended FEA software: FEMAP - 30 license

Computers Requirements:

1. Intel i5 core due processor with 4GB ram with 500GB hard disk – 30 Nos.
2. Laser Printer – 1 No

**Text Books**

1. Nitin S.Gokhale, Practical Finite Element Analysis 2008, Finite To Infinite

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Analyze the force, stress, deflection in mechanical components.**

**(Analyze)**

1. Determine the nodal deflections, reaction forces, and stress for the truss system shown in figure 1 ( $E = 200 \text{ GPa}$ ,  $A = 3250 \text{ mm}^2$ ). (An)

**Figure 1**

2. Determine the nodal deflections, reaction forces, and stress for the cantilever beam shown in Figure 2 and find the maximum deflection. Assume rectangular c/s area of  $0.2 \text{ m} * 0.3 \text{ m}$ , Young's modulus of  $210 \text{ GPa}$ , Poisson's ratio  $0.27$ .(An)

**Figure 2**

**COURSE OUTCOME 2: Modal analysis is performed on mechanical components.**

**(Analyze)**

1. To determine the amplitude and frequency of a given 2D components as shown in Figure 3.(An)

**All Dimension are in mm**

**Figure 3**

2. To determine the amplitude and frequency of a given beam components as shown in (Figure 4) using Finite Element Analysis based ANSYS/FEMAP software. Take Young's modulus  $2.068e11$ , Poisson's Ratio:  $0.3$ . (An)

Figure 4

**COURSE OUTCOME 3: Analyze thermal stress and heat transfer in mechanical components. (Analyze)**

1. To determine the Thermal deformations at various points of a 2D component due to the Temperature load applied over it is shown below in figure 5..(An)

Figure 5

2. To determine the thermal deformations at various points of a shell component due to the temperature load applied it. It is shown below in Figure 6. (An)

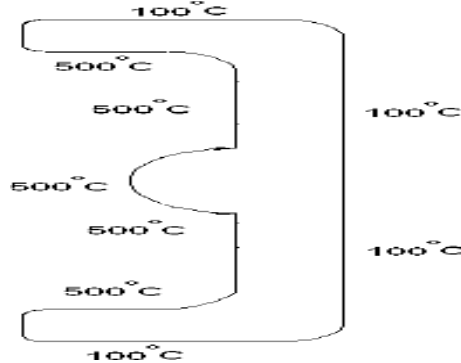

Figure 6

**COURSE OUTCOME 4: Analyze the vibration of mechanical components. (Analyze)**

1. Consider the bar shown in the Figure 7 below. Conduct a harmonic response test by applying a cyclic load (harmonic) at the end of the bar. The frequency of the load will be varied from 1 - 100 Hz. Modulus of elasticity = 200 GPa, Poisson's ratio = 0.3, Density = 7800 Kg/m<sup>3</sup>..(An)

Figure 7

**COURSE OUTCOME 5: Analyze the fluid flow for mechanical components. (Analyze)**

- The problem to be considered is shown schematically in Figure 8. A cold fluid at 293.15 K flows into the pipe through a large inlet, and mixes with a warmer fluid at 313.15 K that enters through a smaller inlet located at the elbow. The pipe dimensions, the fluid properties and boundary conditions are given in SI units. **Note:** Since the geometry of the mixing elbow is symmetric, only half of the elbow needs to be modeled. (An)

**Figure 8**

| The students in a group of 3 to 4 works on a topic approved by the head of the department under the guidance of a faculty member. The Design and Fabrication Project should be a theoretical study/analysis / prototype design / modeling and simulation or a combination of these. A comprehensive project report should be prepared after completing the work to the satisfaction of the supervisor. The progress of the project is evaluated based on a minimum of three reviews. The review committee may be constituted by the Head of the Department. A project report is required at the end of the semester. The developed work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of the Department. |                                |   |   |           |   |

| This course is crucial for engineering students. It promotes excellence, continuous improvement, and collaboration, which strive to integrate technical skills with quality principles, customer satisfaction, and organizational effectiveness. TQM prepares the students for industry challenges.                                                                                                                                                                                                                         |                                                 |                                          |   |   |           |

### COURSE LEVEL ASSESSMENT QUESTIONS

**COURSE OUTCOME 1: Students will be able to familiarized with the basic concept and framework of Total Quality management.**

1. Describe Deming's philosophy for quality management.
2. Elaborate on TQM framework and importance of each element.

**COURSE OUTCOME 2: Students will be able to Understand the contribution of Quality Gurus in TQM Journey**

1. Briefly explain about recognition and reward system along with its effects.
2. Enumerate the Japanese 5S as applicable to services and manufacturing company.

**COURSE OUTCOME 3: Students will be able to provide a comprehensive understanding of the traditional tools and equipping with the knowledge and skills to drive quality improvement initiatives effectively.**

1. Evaluate the purpose and methodology of construction of an Ishikawa diagram with an example.
2. Analyze the three main types of benchmarking. In what circumstances would each type be more appropriate?

**COURSE OUTCOME 4: Students will be able to explain the various types of Techniques and foster their ability to drive organizational improvement and enhance quality management practices.**

1. Draw the house of quality for a product of your choice and describe the QFD methodology.
2. List and explain the various measures of performance in evaluating the success of an organization.

**COURSE OUTCOME 5: Students will be able to apply various Quality Systems and Auditing on implementation of TQM.**

1. Discuss the various elements of ISO 9000-2000 quality system.
2. Estimate the role of audit checklist for quality management system.

**Prerequisites for the course**

All Courses

**Objectives**

1. To use new tools, algorithms and techniques required to fabricate real time project.
2. To give guidance on the various procedures for theoretical and experimental validation of the product and analyse the cost effectiveness.
3. To provide guidelines to prepare technical report of the project.

**Method of Evaluation**

The students in a group of 3 to 4 works on a topic approved by the head of the department under the guidance of a faculty member. The Project Work Phase – 2 should be Fabricated product/ testing setup of an experimentation unit/ apparatus/ small equipment. The product should be Theoretically/Experimentally verifiable based on principles used in the concept. It should have valid database/algorithm, output reports, research findings and future scope. The progress of the project is evaluated based on a minimum of three reviews. The review committee may be constituted by the Head of the Department. A project report is required at the end of the semester. The project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of the Department.

**Outcomes****Upon completion of the course, the students will be able to:**

- CO1: Design and develop the real time working model after conducting experimentation **(Create)**  
 CO2: Utilize the new tools, algorithms, techniques that contribute to obtain the solution of the project. **(Apply)**  
 CO4: Test and validate through conformance of the developed product **(Analyze)**  
 CO4: Demonstrate the results and analyze the cost effectiveness of the product **(Analyze)**  
 CO5: Demonstrate the project work in the form of oral presentation, report and technical/patent/paper publications. **(Apply)**

**COURSE LEVEL ASSESSMENT QUESTIONS****COURSE OUTCOME 1: Describe the basics of fluid power system and its applications in industry (Understand)**

1. Differentiate between hydraulics and pneumatics. (R)
2. Explain the construction and working principle of radial piston pump with neat sketch. (U)

**COURSE OUTCOME 2: Identify appropriate actuators and control valves for fluid power applications (Understand)**

1. List the significance of directional control valves. (R)
2. Describe single acting cylinder and cylinder cushioning with a neat sketch (U)

**COURSE OUTCOME 3: Illustrate a hydraulic circuit for real time applications (Apply)**

1. Differentiate between electro hydraulic servo valve and mechanical servo valves (R)
2. Discuss the hydrostatic transmission with suitable sketches and applications. (U)
3. Examine a hydraulic circuit for synchronizing two cylinder with flow control valves (A)

**COURSE OUTCOME 4: Demonstrate the concepts of pneumatic system and its logic circuits (Apply)**

1. List the basic components of pneumatic system. (R)
2. Explain the graphical symbol and Explain the construction and working principle of FRL Unit (U)
3. Examine a pneumatic circuit for the following sequence using cascade method A+B+B-A- where the + cylinder extraction and - cylinder retraction (A)

**COURSE OUTCOME 5: Examine the troubleshooting of fluid power circuits for engineering applications (Apply)**

1. List the problems caused by the contaminants in the hydraulic system. (R)
2. Describe hydraulic and pneumatic power packs with suitable sketches and illustrations (U)
3. Examine a pneumatic circuit to actuate a shaping machine ram. Incorporate the following features in the circuit. (a) rapid tool approach (b) slow cutting (c) rapid tool retraction / return (A)

**COURSE LEVEL ASSESSMENT QUESTIONS****COURSE OUTCOME 1: Define the mechanisms involved in elastic and plastic behavior of materials. (Understand)**

1. What is Larsen-Miller parameter? (R)
2. Explain the Griffith's theory of brittle fracture with relevant diagram. (U)

**COURSE OUTCOME 2: Explain the components under different loading by considering the fracture. (Understand)**

1. State Paris law. (R)
2. Write short notes on Fracture toughness. (U)

**COURSE OUTCOME 3: Discuss the materials usage for the design of engineering structures. (Understand)**

1. Mention the properties to be considered while selecting materials for auto components (R)
2. Explain the method of selection of materials on the basis of service requirements. (U)
3. With a case study explain the selection of materials for aero applications. (A)

**COURSE OUTCOME 4: Examine the usage of modern materials in real time applications. (Apply)**

1. Name any two materials which exhibit shape memory effect. (R)
2. Write short notes on TRIP steel. (U)
3. Explain the strengthening mechanism used in Maraging steel (A)

**COURSE OUTCOME 5: Predict the different testing techniques in alloys. (Apply)**

1. Draw the different levels of creep. (R)
2. Explain structural metallurgical aspects of creep failure mechanism. (U)

### COURSE LEVEL ASSESSMENT QUESTIONS

#### COURSE OUTCOME 1 Discuss the basic fundamentals of SI engines (Understand)

1. Explain the stages of combustion in SI engines elaborating the flame front propagation. . (U)
2. Explain briefly the various factors that influence the flame speed in S.I engines. (U)

3. Describe the requirements of an S.I engine combustion chamber and explain the various types of combustion chambers. (R)

**COURSE OUTCOME 2: Describe the basic fundamentals of CI engines (Understand)**

1. Explain with the aid of a schematic diagram, explain the combustion process in a C.I engine. . (U)
2. Explain the factors affecting the delay period in C.I engines and summarize them. . (U)

**COURSE OUTCOME 3: Describe the various forms of pollutants and various emission control methods in IC Engines (Understand)**

1. Explain the functioning of a three way catalytic converter, with a sketch. Mention the limitations of a catalytic converter. . (U)
2. What is a driving cycle? Discuss its significance with regard to emissions. . (U)
3. What are the methods to reduce particulate matter emissions? (U)

**COURSE OUTCOME 4: Interpret the various forms of alternative fuel (Apply)**

1. Compare the properties of gasoline, methanol and ethanol as engine fuels and explain how they influence combustion and emission characteristics of engine. (A)
2. Write on the following: (A)  
(i) Production of biodiesel from non-edible oil (ii) Production of Ethanol from Sugarcane

**COURSE OUTCOME 5: Predict the recent technologies implemented in Automobiles (Apply)**

1. Describe the features of homogenous charge compression ignition engine and common rail direct injection engine with neat sketches. (U)
2. Examine the necessity of pressure pick, charge amplifier in an IC engine. (A)

| 21ME5704                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | ALTERNATIVE FUELS                              | L        | T | P | C         |

## **COURSE LEVEL ASSESSMENT QUESTIONS**

### **COURSE OUTCOME 1 Interpret the various alternative fuels available (Apply)**

1. Evaluate the Performance emission and combustion characteristics in CI and SI engines.(A)
2. With a schematic layout explain the production methods of methanol. (U)

### **COURSE OUTCOME 2: Examine the different methods of vegetable oils (Apply)**

1. Draw and explain the pyrolysis process for producing plastic oil (U)
2. Illustrate the transesterification process for biodiesel production for non-edible oil.(A)

### **COURSE OUTCOME 3: Describe the production methods of hydrogen fuel in IC Engines (Understand)**

1. How the hydrogen energy is useful to run the engine? (U)
2. What are the merits and demerits of using hydrogen as a fuel? (R)

### **COURSE OUTCOME 4: Discuss the production methods of biogas, natural gas etc. (Understand)**

1. Name three methods generally employed for extracting energy from Biomass and explain any two in detail(R)
2. Explain the concept of H<sub>2</sub>S scrubbing in bio gas:(U)

### **COURSE OUTCOME 5: Examine the recent types of vehicle in Automobiles (Apply)**

1. Predict the modifications required for LPG usage in a gasoline car. Also explain how the LPG system works?(A)
- 2.Explain briefly the working principle of fuel cells(R)

## **COURSE LEVEL ASSESSMENT QUESTIONS**

### **COURSE OUTCOME 1: Summarize the industrial maintenance concepts. (Understand)**

1. What are the objectives of maintenance organization and what different types of organizations are in use in Indian industries?(U)
2. What is equipment availability and what are the three basic approaches to define and quantity availability.(U)

### **COURSE OUTCOME 2: Compare the maintenance engineering approaches employed in all fields of industries. (Understand)**

1. What are all the steps involved in preventive maintenance why preventive maintenance is better than reactive maintenance.(U)
2. Distinguish between fixed time maintenance and condition based maintenance. Give the merits and demerits.(U)

### **COURSE OUTCOME 3: Identify the different maintenance categories Preventive maintenance condition monitoring and repair of machine elements.(Understand)**

1. What is leakage monitoring? Explain some of the leakage mediums used for condition monitoring.(U)
2. What is wear debris analysis what are the three wear debris analysis techniques commonly used and compare their performance and uses?(U)

### **COURSE OUTCOME 4: Interpret the various instruments used for condition monitoring in industry. (Apply)**

1. Discover the procedure for the repair cycle of gears and lead screw.(A)
2. Construct failure analysis for an industry? Explain their development.(A)

### **COURSE OUTCOME 5: Construct the safety norms and concepts of industries. (Apply)**

1. Explain various hydraulic and pneumatic equipment used in material handling purpose. How to maintain it.(U)
2. Prepare the maintenance procedure for various small equipment for material handling purpose like chain block chain, rope, trolley, and R.G.B.(A)

|                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                     |                                          |          |          |           |

**COURSE LEVEL ASSESSMENT QUESTIONS****COURSE OUTCOME 1: Describe the terms management, and organization, also identify the type of business organization and its culture. (Understand)**

1. Explain in detail about the different types of business organization. (U)
2. Enlighten the relevance of environmental factors that affects global business. (U)

**COURSE OUTCOME 2: Apply the set objectives for strategic management using planning tools and techniques to make decision (Apply)**

1. Demonstrate the 7 habits of highly effective people. Explain them in brief. (A)
2. Explain in brief the 14-point principles of Deming on the concept of good leadership. (R)

**COURSE OUTCOME 3: Sketch the organization chart and structure, demonstrate whether the organization is centralized or decentralized and illustrate human resource management principles (Apply)**

1. Explain the detail about Line and staff organization with an example. Discuss its merits and demerits? (U)
2. Illustrate the differences between Formal and Informal Organization. (A)
3. Sketch the organogram of your own institution taking it as a reference of study. (A)

**COURSE OUTCOME 4: Discuss the motivational theories to direct the employees for better communication and job satisfaction (Understand)**

1. Evaluate the various styles of Leadership. (U)
2. Explain the different components of communication. (U)

**COURSE OUTCOME 5: Predict the budgetary and non - budgetary techniques, application of computers, direct and preventive controlling techniques, and reporting (Apply)**

1. How would you show your understanding about usage of use of computers and IT in Management control? (U)
2. Construct the steps involved in controlling and requirements for effective control. (A)

## **COURSE LEVEL ASSESSMENT QUESTIONS**

### **COURSE OUTCOME 1 (Understand)**

1. Combination of properties can be achieved in composites. Justify this statement & Explain. **(Understand)**
2. Compare matrix and dispersed phases in a composite material. What should be the important mechanical characteristics of matrix and dispersed phases for FRCs? **(Understand)**
3. State whether the following statements are true or false and give reasons:**(Understand)**
  - Aramid fibers are commonly used as reinforcements for metal and ceramic matrices.
  - Carbon fiber has poor compressive properties.
4. Bulk material is stronger than fibrous material.**(Understand)**
  - Glass fiber is an anisotropic material.
  - Glass fiber is an amorphous material.
  - Whiskers are not widely used for making composites.

### **COURSE OUTCOME 2 (Understand)**

1. Explain the criteria for selecting a process to manufacture FRP products. **(Understand)**
2. Compare hand lay-up and RTM processes. **(Understand)**
3. Explain the fabrication process for MMC. **(Understand)**

### **COURSE OUTCOME 3 (Understand)**

1. Explain the nanoclay composites and its applications. **(Understand)**
2. Describe the functionally graded composites and their applications. **(Understand)**

### **COURSE OUTCOME 4 (Analyse)**

1. Analyse the weight fraction and volume fraction of fibers in the glass/epoxy composites. The following data is obtained from the burnout test.  
weight of the empty crucible = 46.5401 gm  
weight of crucible and composite piece = 49.1201 gm  
weight of crucible and glass fiber = 48.3420 gm.  
The density of glass fiber is 2600 kg/m<sup>3</sup> and 1300 kg/m<sup>3</sup> **(Analyse)**
2. Calculate the ratio of fiber stress to matrix stress and matrix stress to composite stress for  $V_f = 15\%$ , 30 %, 45 % and 70 %. Take  $E_f = 250$  G Pa and  $E_m = 15$  G Pa  
Analyse
3. Calculate the strains in the xy directions for the composite subjected to the loading as shown in the figure. The composite is made of boron-epoxy. Take the data given for 0° unidirectional E-glass-epoxy as:  $E_{11} = 200$  GPa;  $E_{22} = 20$  GPa;  $G_{12} = 6.5$  GPa;  $\nu_{12} = 0.2$ . **(Apply)**

**COURSE OUTCOME 5 .(Apply)**

1. Determine A, B, and D matrices for the 2-ply laminate as shown in the figure. Assume both the laminae have identical stiffness matrix Q as follows:(Apply)

Fig.(i): Figure showing the laminate orientation

$$[Q] = \begin{bmatrix} 130 & 2.5 & 0 \\ 2.5 & 10 & 0 \\ 0 & 0 & 3.5 \end{bmatrix} GPa$$

2. The material properties are,  $E_1 = 147 \text{ GPa}$ ,  $E_2 = 15 \text{ GPa}$ ,  $G_{12} = 12 \text{ GPa}$  and  $\nu_{12} = 0.3$ . For the lamina with orientation  $[45^\circ]$ , Calculate the lamina stresses due to the load of  $N_{xx} = 100 \text{ kN/m}$ . Verify for failure through the different failure criteria, if the strength values are(Apply)

$$\begin{aligned} \sigma_{LU} &= 1200 \text{ MPa} \\ \sigma_{TU} &= 60 \text{ MPa} \\ \tau_{LTU} &= 90 \text{ Mpa} \end{aligned}$$

**COURSE LEVEL ASSESSMENT QUESTIONS****COURSE OUTCOME 1: Enumerate the various basic processing methods employed for Plastics (Understand)**

1. Review the following mixing devices with their all salient features.
  - a). High speed mixer b). Ball mill c). Two roll mill d). Banbury Mixer **(Remember)**
2. Build a mixing device which have the key components of vertical vessel with a screw and state its functions and applications with neat portrayal **(Understand)**
3. Correlate the various mixing conditions for vulcanized rubbers and plastics **(Understand)**

**COURSE OUTCOME 2: Enumerate the principles of calendaring and extrusion processes (Understand)**

1. Apply the suitable polymer production technology to produce ‘plastic pellets’ **(Understand)**
2. Select the suitable production method of ‘Shampoo Bottle’ and label the component and process **(Understand)**
3. Check whether the high-tension wires from heavy voltage towers insulated in our country. If, not rank the issues caused by it. And label a best solution with detailed processes. **(Understand)**

**COURSE OUTCOME 3: Apply the principles of injection moulding in manufacturing of components (Apply)**

1. Choose the best mould which can be used in the production of ‘bottle caps’ in large quantity and discuss the process. **(Apply)**
2. Apply the suitable polymer production technology to produce ‘plastic storage containers’ **(Apply)**
3. Select the often-utilized molding method of strong, lightweight parts that are easily painted and elaborate the process. **(Apply)**

**COURSE OUTCOME 4: Apply the other moulding techniques in production of components (Apply)**

1. Apply the rules, facts and techniques for the production of ‘Interior Door Panels.’ **(Apply)**
2. Select the suitable production method of ‘equipment panels’ and label the component and process **(Apply)**
3. Apply the rules, facts and techniques for the production Microwave & Deep Freeze Containers **(Apply)**

**COURSE OUTCOME 5: Apply the basic concepts in design of mould system and evaluate the applications of CAD / CAM (Apply)**

1. With suitable sketch, explain the ejector system in mould design. **(Remember)**
2. Check whether CAD/CAM software can be used in mould design of polymer manufacturing, If yes, explain the basic concepts in mould design **(Understand)**
3. Design the mold which is used when the part of the runner system is on a different plane to the injection location and explain **(Apply)**

## **COURSE LEVEL ASSESSMENT QUESTIONS**

### **COURSE OUTCOME 1: Demonstrate the types & classifications of aircraft components and control systems (Understand)**

1. Explain primary and secondary flight control surfaces and mention the different types of tail arrangements of an aircraft. . (U)
2. Draw three view of an aircraft and show all the major parts? Explain the major components and parts.. (U)

### **COURSE OUTCOME 2: Interpret the basic concepts of flight & Physical properties of Atmosphere (Understand)**

1. Explain the characteristics of an airfoil, when subjected to different angle of attacks. . (U)
2. Discuss the pressure distribution on an aerofoil? Sketch the pressure distribution on an aerofoil at various angle of attack.. (U)

### **COURSE OUTCOME 3: Describe the principle and working of different aircraft systems. (Understand)**

1. Explain the working of the typical hydraulic system used for the passenger aircraft. (U)
2. Describe aircraft engine ignition system and starting system operation with neat sketches.(U)

### **COURSE OUTCOME 4: Determine dynamic longitudinal stability, lateral and directional dynamic stability (Apply)**

1. Discuss the dynamic stability aspects of an aircraft considering its linearized longitudinal equations of motion being analyzed under three degrees of freedom system. (A)
2. The characteristic equation of an airplane is  $\lambda^2 - 0.5\lambda + 9.5 = 0$ . Determine whether the motion is dynamically stable or unstable. . (A)

### **COURSE OUTCOME 5: Calculate the forces and moments that are acting on an aircraft, variation of thrust, power, SFC with velocity and altitude. (Apply)**

1. Explain about the role of leading edge extension to improve the performance of aircraft at high angle of attack. . (U)
2. A flat plate is kept at  $15^\circ$  angle of attack to a supersonic flow at Mach number 2.4. Solve the flow field around the plate and determine the inclination of slipstream direction using shock expansion theory. (A)

**Outcomes**

**Upon completion of the course, the students will be able to:**

- CO1.** Demonstrate mathematical models of dynamical systems with single degree of freedom to determine their response to harmonic, transient and impulse loads. **(Apply)**
- CO2.** Demonstrate mathematical models of dynamical systems with multiple degrees of freedom to calculate natural frequencies and mode shapes. **(Apply)**
- CO3.** Determine the natural frequencies and mode shapes of continuous systems such as strings in transverse vibrations, bars in longitudinal vibrations, and circular shafts in torsional vibrations using analytical and numerical methods. **(Apply)**
- CO4.** Illustrate the severity of vibration and choose a suitable vibration isolation system, perform static and dynamic balancing and design suitable vibration absorber systems. **(Apply)**
- CO5.** Describe the vibration limits and able to select various vibration measuring instruments **(Understand)**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Demonstrate mathematical models of dynamical systems with single degree of freedom to determine their response to harmonic, transient and impulse loads. (Apply)**

1. Discuss general theory of seismic instruments and obtain the condition for using it as a vibrometer. (U)

2. A shaft 1.5 m long supported in flexible bearings at the ends carries two wheels each of 50 kg mass. One wheel is situated at the centre of the shaft and the other at a distance of 375 mm from the centre towards left. The shaft is hollow of external diameter 75 mm and internal diameter 40 mm. The density of the shaft material is  $7700 \text{ kg/m}^3$  and its modulus of elasticity is  $200 \text{ GN/m}^2$ . Find the lowest whirling speed of the shaft, taking into account the mass of the shaft. (A)

**COURSE OUTCOME 2 Demonstrate mathematical models of dynamical systems with multiple degrees of freedom to calculate natural frequencies and mode shapes. (Apply)**

1. A machine mounted on springs and fitted with a dashpot has a mass of 75 kg. There are three springs, each of stiffness 10 N/mm. The amplitude of vibrations reduces from 38.4 to 6.4 mm in two complete oscillations. Assuming that the damping force varies as the velocity, determine: 1. the damping coefficient, 2. the ratio of frequencies of damped and undamped vibrations and 3. the periodic time of damped vibrations. (A)
2. A mass of 10 kg is suspended from one end of helical spring; the other end is being fixed. The stiffness of the spring is 10 N/mm. The viscous damping causes the amplitude to decrease to one-tenth of the initial value in four complete oscillations. If a periodic force of  $150 \cos 50t$  (N) is applied at the mass in the vertical direction, find the amplitude of the forced vibrations. What is its value of resonance? (A)

**COURSE OUTCOME 3: Determine the natural frequencies and mode shapes of continuous systems such as strings in transverse vibrations, bars in longitudinal vibrations, and circular shafts in torsional vibrations using analytical and numerical methods. (Apply)**

1. Figure shown a system subjected to vibration. Find an expression for the natural frequency, locate the mode and draw mode shapes. (A)

2. State and proof Maxwell reciprocal theorem. Explain Dunkerley's method. (U)

**COURSE OUTCOME 4: Illustrate the severity of vibration and choose a suitable vibration isolation system, perform static and dynamic balancing and design suitable vibration absorber systems (Apply)**

1. A motor is mounted on a platform that is observed to vibrate excessively at an operating speed of 6000 rpm producing a 250-N force. Design a vibration absorber (undamped) to add to the platform. Note that in this case the absorber mass will only be allowed to move 2 mm because of geometric and size constraints. (A)
2. A machine sorts bolts according to their size by moving a screen back and forth using a primary system of 2500 kg with a natural frequency of 400 cycle/min. Design a vibration absorber so that the machine-absorber system has natural frequencies below 160 cycles/min and above 320 rpm. (A)

**COURSE OUTCOME 5: Describe the vibration limits and able to select and analyse by various vibration measuring instruments (Understand)**

1. Explain the experimental modal analysis and the necessary basic equipments. (U)
2. Explain machine condition monitoring techniques. (U)

**Outcomes**

Upon completion of the course, the students will be able to:

CO1: Examine the various design requirements and get acquainted with the processes involved in product development. **(Apply)**

CO2: Apply the design processes to develop a successful product. **(Apply)**

CO3: Apply scientific approaches to provide design solutions. **(Apply)**

CO4: Design solution through relate the social needs and provide a solution. **(Apply)**

CO5: Apply the principles of material selection, costing and manufacturing in design. **(Apply)**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Students will be able to predict the various design requirements and get acquainted with the processes involved in product development (Apply)**

1. List the various methods and forms of design (R)
2. Discuss about the requirements of a good design (U)

3. Describe the steps in benchmarking process (A)

**COURSE OUTCOME 2: Students will be able to predict the suitable method for the design processes to develop a successful product. (Apply)**

1. Explain QFD with a suitable example (A)
2. Discuss the importance of problem definition (U)
3. State the importance of Prototype modeling, simulation, testing and evaluation (R)

**COURSE OUTCOME 3: Students will be able to predict the scientific approaches to provide design solutions. (Apply)**

1. Explain the creativity methods (R)
2. Discuss about theory of innovative problem solving (U)
3. How the innovative problem-solving technique is used in design creativity (A)

**COURSE OUTCOME 4: Students will be able to predict the design solution through relate the human needs and provide a solution. (Apply)**

1. Describe the design for environment (R)
2. Why the human factors is considered in design (U)
3. Derive a design process for aesthetics and visual aspects (A)

**COURSE OUTCOME 5: Students will be able to predict the principles of material selection, costing and manufacturing in design. (Apply)**

1. Explain material selection methods in detail (U)
2. List the benefits of design of experiments (R)
3. Discuss Design for Manufacturability (DFM) and Design for Assembly (DFA) with a suitable example (A)

**Outcomes****Upon completion of the course, the students will be able to:**

- CO1.** Apply the principles of physics, chemistry and thermodynamics to combustion **(Apply)**
- CO2.** Acquire the knowledge on laminar and turbulent premixed combustion and its characteristics **(Understand)**
- CO3.** Interpret combustion and its characteristics of gaseous, liquid and solid fuel **(Understand)**
- CO4.** Assimilate knowledge about combustion processes and strategies adapted in gas turbines.  
**(Apply)**
- CO5.** Identify novel combustion technologies that mitigate combustion driven emission.  
**(Remember)**

## COURSE LEVEL ASSESSMENT QUESTIONS

### COURSE OUTCOME 1: Apply the principles of physics, chemistry and thermodynamics to combustion (Apply)

1. A closed, fixed, adiabatic volume contains a stoichiometric mixture of 2 kmole of H<sub>2</sub> and 1 kmole of O<sub>2</sub> at 100 kPa and 298 K. Find the adiabatic flame temperature assuming the irreversible reaction (A)

2. Consider a variant on the previous example in which the mixture is diluted with an inert, taken here to be N<sub>2</sub>. A closed, fixed, adiabatic volume contains a stoichiometric mixture of 2 kmole of H<sub>2</sub>, 1 kmole of O<sub>2</sub>, and 8 kmole of N<sub>2</sub> at 100 kPa and 298 K. Find the adiabatic flame temperature and the final pressure, assuming the irreversible reaction (A)

### COURSE OUTCOME 2: Acquire the knowledge on laminar and turbulent premixed combustion and its characteristics (Understand)

1. Identify the effects of chemical and physical variables on burning velocity during premixed flame? (U)
2. Comparison between the Laminar and Turbulent premixed flame? (U)

### COURSE OUTCOME 3: Interpret combustion and its characteristics of gaseous, liquid and solid fuel (Understand)

1. Characteristics for the liquid fuel to obtain the non-premixed combustion? (U)
2. Explain briefly about the solid fuel combustion? (U)

### COURSE OUTCOME 4: Assimilate knowledge about combustion processes and strategies adapted in gas turbines (Apply)

1. The mass flow rate of air through an aircraft engine is 10 kg/s. The compressor outlet temperature is 400 K and the turbine inlet temperature is 1800 K. The heating value of the fuel is 42 MJ/kg and the specific heat at constant pressure is 1 kJ/kg-K. The mass flow rate of the fuel in kg/s is approximately. For a given inlet condition, if the turbine inlet temperature is fixed, what value of compressor efficiency given below leads to the lowest amount of fuel added in the combustor of a gas turbine engine? (A)
2. Identify the type of fuels used for gas turbine combustion chambers with its physical and chemical properties? (U)

### COURSE OUTCOME 5: Identify novel combustion technologies that mitigate combustion driven emission (Remember)

1. Describe the types of technique used to reduce exhaust emission (R)
2. Recognize the chemical balance during the combustion of the liquid fuel? (R)

**Outcomes****Upon completion of the course, the students will be able to:**

- CO1.** Describe the fundamentals of fuel cell (**Understand**)
- CO2.** Describe the performance of fuel cell systems (**Understand**)
- CO3.** Illustrate the construction and operation of fuel cell stack and fuel cell system (**Apply**)
- CO4.** Illustrate the modelling techniques for fuel cell systems (**Apply**)
- CO5.** Classify the different methods of fuel processing for fuel cells (**Understand**)

**COURSE LEVEL ASSESSMENT QUESTIONS****COURSE OUTCOME 1: Describe the fundamentals of fuel cell (Understand)**

1. Describe the types of fuel cell – low, medium and high temperature fuel cell? (**U**)
2. Compare between the low, medium and high temperature fuel cells? (**U**)

**COURSE OUTCOME 2: Describe the performance of fuel cell systems (Understand)**

1. Differentiate between the liquid hydrogen and compressed hydrogen? (**U**)
2. Explain briefly about the alkaline fuel with neat sketch? (**U**)

**COURSE OUTCOME 3: Illustrate the construction and operation of fuel cell stack and fuel cell system (Apply)**

1. Illustrate suitable sketch for the Fuel cell performance characteristics with respective to current/voltage & voltage efficiency? **(A)**
2. What are the main components of membrane electrode assembly components? **(U)**

**COURSE OUTCOME 4: Illustrate the modelling techniques for fuel cell systems (Apply)**

1. A company is developing a new car powered by a fuel cell system that runs on H<sub>2</sub>. You have been asked to consider generating the H<sub>2</sub> by electrolysis with a fuel cell. The H<sub>2</sub> tank to be used is 10 liters in volume and a fill-up requires a pressure of 34 atm. a) Calculate the current required to operate at a voltage of 1.8V. b) Calculate the rate of hydrogen production per membrane area and the total membrane area required to fill the tank in 2 minutes. Consider the following specifications of the system. 60% conversion of H<sub>2</sub>O  $E_0 = 1.172$  V The cathode pressure is maintained at 1 atm. The anode pressure is maintained at 1 atm Membrane thickness = 100  $\mu$ m Membrane conductivity ( $\sigma$ ) = 0.1 S/cm ( $S = 1/\Omega$ ) Electrolysis T = 373 K (assume water is in the gas phase). H<sub>2</sub> storage tank T = 298 K **(A)**
2. Explain the different states of Hydrogen storage technology? **(U)**

**COURSE OUTCOME 5: Classify the different methods of fuel processing for fuel cells (Understand)**

1. Explain different methods of production of hydrogen and catalytic steam reforming in details. **(U)**
2. Discuss the technologies for hydrogen production? **(U)**
3. Explain a lay out of a fuel cell in automobile. **(U)**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Summarize the basics of industrial engineering and its applications in production and service sector (Understand)**

1. Explain any four fields of application of Industrial Engineering (U).
2. Write the role of an Industrial Engineer with respect to Management approaches (R).

**COURSE OUTCOME 2: Apply productivity techniques for continuous improvement in different functionalities of an industry. (Apply)**

1. Importance of Vision, mission and objectives statements for an organization (A)
2. How to formulate the management structure for a company (U)

**COURSE OUTCOME 3: Interpret the optimal layout design using software (Understand)**

1. Write down the types of production layouts (U)
2. Describe the importance of quantitative techniques for optimal layout design (U)

**COURSE OUTCOME 4: Demonstrate the resource and personnel management requirements for an organization. (Apply)**

1. Differentiate between personnel management and industrial relations (A)
2. Write notes on wage incentive plan. (U)

**COURSE OUTCOME 5: Prepare a decision-making plan on project management (Apply)**

1. Apply the theories of decision making differ from other methods (A)
2. Describe about project crashing, smoothing (A)

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Describe the importance of Lean and six sigma (Understand)**

1. Give a detailed report on how Six Sigma is related to TQM, lean manufacturing, and process tolerance. **(U)**
2. Enumerate the importance of cost of quality. **(U)**

**COURSE OUTCOME 2: Demonstrate the scope of tools and techniques. (Understand)**

1. How a Milestone tracker diagram helps in continuous improvement of a firm. **(A)**
2. Explain the relationship between lean manufacturing and six sigma **(U)**

**COURSE OUTCOME 3: Illustrate Plan the resources using six sigma methodologies (Apply)**

1. Describe Earned value management in detail **(U)**
2. Depict the process of FMEA with a sample form **(U)**

**COURSE OUTCOME 4: Apply QFD to face the implementation and challenges. (Apply)**

1. Demonstrate important is a customer to the firm and why is a quality index required? What are the various challenges faced? **(A)**
2. Enumerate the various principles of CPQ and Six sigma **(U)**

**COURSE OUTCOME 5: Apply the process of evaluation and continuous improvement methods. (Apply)**

1. How is Kaizen implemented in an organization? **(A)**
2. Differentiate inventory in progress and work in progress. **(U)**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Explain the basic concepts of CAD, CAM and computer integrated manufacturing systems. (Understand)**

1. Discuss about seven forms of waste in production and methods to eliminate them. (U)
2. Explain the hierarchical structure of computerized elements of CIM. (U)

**COURSE OUTCOME 2: Demonstrate the production planning and control and computerized process planning. (Apply)**

1. Define MRP. Explain the inputs to MRP and various MRP outputs. Also list the various benefits of MRP. (R)
2. Show in detail the phases of shop floor system. (A )

**COURSE OUTCOME 3: Differentiate the different coding systems used in group technology. (Understand)**

1. Discuss the production flow analysis in detail. (U )
2. Explain cellular manufacturing in detail. (U )

**COURSE OUTCOME 4: Explain the concepts of flexible manufacturing system (FMS) and automated guided vehicle (AGV) system. (Understand)**

1. Define FMS and explain in detail about the FMS components. (R)
2. Explain vehicle guidance technology in AVGs. (U)

**COURSE OUTCOME 5: Determine the classification of robots used in industrial applications. (Apply)**

1. Demonstrate the basic structure of a robotic system with neat sketch. (A)
2. Summarize what are robot end effectors? How do you classify them? (U)

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Explain the principles of flexible manufacturing systems (Understand)**

1. Discuss the major elements of FMS? State the applications of FMS. (U)
2. Explain different types of flexibility in manufacturing in FMS concept. (U)

**COURSE OUTCOME 2: Discuss the concepts and applications of computers in flexible manufacturing systems. (Understand)**

1. Explain various functions performed by computer control system in FMS implementation. (U)
2. Discuss the role of software and considerations for maintenance planning and reporting. (U)

**COURSE OUTCOME 3: Apply the modern tools in database management of FMS (Apply)**

1. Show the languages for the simulation of FMS and the selection of simulation software. (A)
2. Discuss input and output analysis in FMS simulation with a case study. (U)

**COURSE OUTCOME 4: Illustrate the performance of group technology in FMS. (Apply)**

1. Examine the sorting-based algorithm in grouping parts with an example. (A)
2. Discuss bond energy algorithm in grouping parts with an example. (U)

**COURSE OUTCOME 5: Show the application of FMS and understand the future factory of FMS. (Apply)**

1. Predict how is FMS applied in prismatic part production? Give a case study. (A)
2. Show the design philosophy for the FMS of the future? Discuss in detail. (A)

**COURSE LEVEL ASSESSMENT QUESTIONS****COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Summarize about the layout and sub systems of hybrid vehicles. (Understand)**

1. Draw a general lay out of a EV and discuss the transmission characteristics. **(U)**
2. With a neat sketch, explain the configuration of Series hybrid electric drive train. **(U)**

**COURSE OUTCOME 2: Explain the architecture of various models of hybrid Vehicles Systems. (Understand)**

1. Explain the configuration of v/f-controlled induction motor drive with field weakening mode and constant-torque mode' **(U)**

2. A vehicle with power plant power output at the drive train considering all losses is 100kW. The maximum total resistance the vehicle experiences is 3.6 li. Calculate the velocity the vehicle can achieve in kmlh under this condition?. **(U)**

**COURSE OUTCOME 3: Classify and explain electronic devices and motor drives .  
(Understand)**

1. Draw the typical torque Vs speed envelope curves of drive train motors and show the continuous, intermittent and peak overload ratings **(U)**
2. Explain compound wound DC motor with neat circuit diagram and also write the voltage and circuit Diagram**(U)**

**COURSE OUTCOME 4: Estimate the parameters influencing the energy storage Systems. (Understand)**

1. Why an energy management control system is required in an HEV? Do you think an elaborate energy management system similar to that applied to a hybrid vehicle, is required in an electric vehicle? Explain **(U)**
2. Draw the block diagram of a general Fuzzy Logic controller (FLC) and show (5) the core components of the FLC and the inputs and outputs relevant to a hybrid electric vehicle control'. **(U)**

**COURSE OUTCOME 5: Infer the results from simulation of driving cycles.  
(Understand)**

1. Explain the experimental modal analysis and the necessary basic equipments. **(U)**
2. A hybrid electric vehicle has two sources- an ICE with output power of 80kW and battery storage. The battery storage is a 150 Ah, Cio battery at 120V. (i) Calculate the battery energy capacity (ii). Without de-rating the Attr capacity, what is the maximum power that can be supported by the battery? (iii). What is the electrical motor power output if the total efficiency of power converter and motor combination is 98%. (iv). what is the maximum power that can be transmitted to the wheels if the transmission efficiency is 95%? **(U)**

**Outcomes**

**Upon completion of the course, the students will be able to:**

- CO1.** Describe about working principle of electric vehicles (**Understand**)
- CO2.** Apply the working principle and select various motors used in electric vehicles. (**Apply**)
- CO3.** Classify the types of drive train in electric vehicles (**Understand**)
- CO4.** Differentiate the types and working principle of battery (**Understand**)
- CO5.** Identify the various types and working principle of sensors (**Understand**)

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Describe about working principle of electric vehicles (Understand)**

1. Describe the historical background of electrical vehicle in India? **(U)**
2. Discuss the components of the current electrical vehicles? **(U)**

**COURSE OUTCOME 2: Apply the working principle and select various motors used in electric vehicles (Apply)**

1. A vehicle powered by PM-DC motor is cruising at 36 kmph, the applied voltage is 25V, the BEMF is 24V and the winding resistance is 20 m $\Omega$ . How much current is the motor drawing? **(A)**
2. Comparison between the DC and BLDC motor? **(U)**

**COURSE OUTCOME 3: Classify the types of drive train in electric vehicles (Understand)**

1. Describe the working principle of brakes regenerative braking system? **(U)**
2. Comparison between series and parallel HEDT? **(U)**

**COURSE OUTCOME 4: Differentiate the types and working principle of battery (Understand)**

1. Describe briefly about the Battery technology in India with standard specification? **(U)**
2. State the working principle of the Lithium batteries for electric vehicle? **(U)**

**COURSE OUTCOME 5: Identify the various types and working principle of sensors (Understand)**

1. Describe the Autonomous EV cars? **(U)**
2. List of the latest sensors used in electric vehicles? **(U)**

**PROFESSIONAL  
ELECTIVE III**

## **COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Students will be able to understand the concept of sustainability in terms of design, construction and development. (Remember, Understand and Apply)**

1. What do you mean by sustainable engineering design (R)
2. Differentiate renewable and non-renewable resources (U)
3. "Sustainable development is the only way left for human survival" - Give your comments (A)

**COURSE OUTCOME 2: Students will be able to gain knowledge in engineering design tools and life cycle assessment. (Remember, Understand and Apply)**

1. Explain Life cycle assessment with different types (R)
2. Discuss the hybrid inventory analysis (U)
3. Write down the design procedure for repair and up-grade, disassembly and recycling (A)

**COURSE OUTCOME 3: Students will be able to apply sustainable value creation approaches, design changes & continual improvement. (Remember, Understand and Apply)**

1. State and explain environmental design characteristics (R)
2. Explain the smart data systems for sustainable development design (U)
3. Write the procedure of breakthrough design concepts for sustainability (A)

**COURSE OUTCOME 4: Students will be able to carry out sustainable design, green engineering, flexible design etc. (Remember, Understand and Apply)**

1. Write short notes on ecological succession (R)
2. State and explain green engineering (U)
3. Derive a design process for inverse manufacturing (A)

**COURSE OUTCOME 5: Students will be able Design according to the customer needs. (Remember, Understand and Apply)**

1. Differentiate customers and stakeholders (R)
2. How to analyze the behavior of customer (U)
3. Discuss the Kano model for understanding customer needs (A)

## **COURSE LEVEL ASSESSMENT QUESTIONS**

### **COURSE OUTCOME 1: Design according to different types of friction. (Apply)**

1. A 7.00kg block of wood is almost about to slide down a wooden wedge that has angle  $30^\circ$  with respect to the floor. The coefficient of static friction is 0.6910.691. What is the force of static friction? (A)
2. Explain the mechanism of rolling friction and compare it with sliding friction. (U)

### **COURSE OUTCOME 2: Demonstrate various wearing mechanisms and measurements. (Understand)**

1. What are the classification of wear processes? Explain with example (U)
2. Explain the mechanism of sliding wear. (U)

### **COURSE OUTCOME 3: CO3. Enumerate the properties and testing methods of various lubricants. (Understand)**

1. State various types of lubricants and their industrial applications (U)
2. Discuss the role of eccentricity in hydrodynamic lubrication of journal bearing. (U)

### **COURSE OUTCOME 4: Calculate shear stress, torque and coefficient of friction. (Apply)**

1. A  $360^\circ$  hydrodynamic short journal bearing is to be designed to support a radial load of 5.5 kN. The rotation of journal is 5000rpm. The eccentricity ratio is 0.6. If the viscosity of lubricating oil is  $45 \times 10^{-9}$  Ns/mm<sup>2</sup> and supplied at a rate of 0.5 l/min to the bearing, Determine the dimensions of the journal, bearings and minimum oil film thickness. Take  $l/d$  ratio as 0.4. (A)
2. Derive the equation of pressure distribution for hydrostatic step bearing. State the assumptions. (U)

### **COURSE OUTCOME 5: Explain surface process and bearing materials. (Understand)**

1. Explain the experimental modal analysis and the necessary basic equipments. (U)
2. Explain machine condition monitoring techniques. (U)

**Outcomes**

**Upon completion of the course, the students will be able to:**

**CO1:** Apply the basic concept of isentropic flow through variable area ducts **(Apply)**

**CO2:** Interpret the variation of flow properties through constant area ducts with heat transfer and Friction **(Apply)**

**CO3:** Enumerate the variation of flow parameters across the normal and oblique shocks **(Apply)**

**CO4:** Apply the principle of different jet engine and numerical analysis of jet engine **(Apply)**

**CO5:** Apply the principle of different rocket engine and numerical analysis of rocket engine **(Apply)**

**Text Books**

1. Anderson J.D., "Modern Compressible Flow", 3rd Edition, McGraw Hill, (2018)
2. Yahya S.M., "Fundamentals of Compressible Flow", New Age International (P) Limited, New Delhi, (2016)

**Reference Books**

1. Hill P., Peterson C., "Mechanics and Thermodynamics of Propulsion", Addison – Wesley Publishing company, (2012)
2. Zucrow N.J., "Principles of Jet Propulsion and Gas Turbines", John Wiley, New York, (2016)
3. Sutton G.P., "Rocket Propulsion Elements", John Wiley, (2012)
4. Ganesan V., "Gas Turbines", Tata McGraw Hill Publishing Co., New Delhi, (2018)

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1:** Apply the basic concept of isentropic flowthrough variable area ducts **(Apply)**

1. The Pressure, temperature and velocity of air at the entry of a diffuser are 0.7 bar, 345 K and 190 m/s respectively. The entry diameter of a diffuser is 15 cm and exit diameter is 35 cm. Determine the following. (1) Exit pressure (2) Exit velocity (3) Force exerted on the diffuser walls. Assuming isentropic flow and take  $\gamma = 1.4$ ,  $C_p = 1005 \text{ J/kg K}$

2. An aircraft flies at a velocity of 700 kmph in an atmosphere where the pressure is 75 kPa and temperature is 5°C. Calculate the Mach number and stagnation properties

**COURSE OUTCOME 2:** Interpret the variation of flow properties through constant area ducts with heat transfer and Friction **(Apply)**

1. Air at  $P_1 = 3.4$  bar,  $T_1 = 35$  °C enters a circular duct a mach number of 0.14. The exit mach number is 0.6 and co-efficient of friction is 0.004. If the mass flow rate is 8.2 kg/s. Determine  
1. Pressure temperature at the exit. 2. Diameter of the duct. 3. Length of the duct. 4. Stagnation pressure loss. 5. Verify the exit Mach number through exit velocity and temperature.

2. Air enters a constant area duct at  $M_1 = 3$  ;  $P_1 = 1$ atm and  $T_1 = 300$ K . Inside the heat added per unit mass is  $Q = 3 \times 10^5$ J/Kg . Calculate the flow properties  $M_2$ ,  $P_2$ ,  $T_2$ ,  $T_{o2}$  and  $P_{o2}$  at exit.

**COURSE OUTCOME 3:** Enumerate the variation of flow parameters across the normal and oblique shocks **(Apply)**

1. When a converging diverging nozzle is operated at off-design condition a normal shock occurs at a section where the cross sectional area is 18.75 cm in the diverging portion at inlet the nozzle the stagnation state is given as 0.21 MPa and 360°C. The throat area is 12.5 cm and exit area is 25 cm. Estimate the exit Mach number, exit pressure loss in stagnation pressure for flow through nozzle.

2. Air flows adiabatically in a pipe. A normal shock wave is formed. The pressure and temperature of air before the shock are 150 kN/m<sup>2</sup> and 25°C respectively. The pressure just after the shock is 350 kN/m<sup>2</sup>. Find, (i) Mach number before shock (ii) Mach number, static temperature and velocity of air after the shock wave. (iii) Increase in density of air (iv) Loss of stagnation pressure (v) Change in entropy

**COURSE OUTCOME 4:** Apply the principle of different jet engine and numerical analysis of jet engine **(Apply)**

1. Explain in the construction and working details about Ramjet engine

2. An aircraft flies at 960 kmph. One of its turbojet engines takes in 40 kg/s of air and expands the gases to the ambient pressure. The air-fuel ratio is 50 and the lower calorific value of the fuel is 43 MJ/kg. For maximum thrust power determine a) Jet velocity b) Thrust c) Specific thrust d) Thrust power e) Propulsive, thermal and overall efficiency f) TSFC

**COURSE OUTCOME 5:** Apply the principle of different rocket engine and numerical analysis of rocket engine **(Apply)**

1. Explain with a help of neat sketch the working of solid and liquid propellant rocket engine.

2. A rocket nozzle has a throat area of 18 cm<sup>2</sup> and combustor pressure of 25 bar. If the specific impulse is 127.42 sec and the rate of flow of propellant is 44.145 N/s, determine the thrust coefficient, propellant weight flow coefficient, specific propellant consumption and characteristic velocity.

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1:** Illustrate the principles, nomenclature and applications of refrigeration systems including air refrigeration system **(Apply)**

1. An air refrigerator used for food storage provides 50 tons of refrigeration. The temperature of air entering the compressor is  $7^{\circ}\text{C}$  and the temperature before entering into expander is  $27^{\circ}\text{C}$ . Assuming 30 % more power is required than theoretical, find (a). Actual C.O.P of the cycle (b). KW capacity required to run the compressor

2. In a refrigeration plant working on Bell Coleman cycle, air is compressed to 5 bar from 1 bar. Its initial temperature is  $10^{\circ}\text{C}$ . After compression, the air is cooled up to  $20^{\circ}\text{C}$  in a cooler before expanding to a pressure of 1 bar. Determine the theoretical C.O.P of the plant and net refrigerating effect. Take  $C_p = 1.005\text{ KJ/Kg K}$  and  $C_v = 0.718\text{ KJ/Kg K}$ .

**COURSE OUTCOME 2:** Enumerate vapor compression refrigeration system and identify methods for performance Improvement **(Apply)**

A refrigeration machine using R-12 as refrigerant operates between the pressures 2.5 bar and 9 bar. The compression is isentropic and there is no undercooling in the condenser. The vapour is in dry saturated condition at the beginning of the compression. Estimate theoretical C.O.P. If the actual C.O.P is 0.65 of theoretical value, calculate the net cooling produced per hour. The refrigerant flow is 5 kg/min. The properties table for the refrigerants need to be added

**COURSE OUTCOME 3:** Describe the working principles of air, vapour absorption, thermoelectric and steam-jet and thermo-acoustic refrigeration systems **(Apply)**

1. Explain with a neat sketch the working of lithium-bromide vapour absorption system
2. Explain thermo-electric refrigeration system with sketch

**COURSE OUTCOME 4:** Identify suitable refrigerant and equipment's for various refrigerating systems **(Apply)**

1. What is an azeotrope? Give some examples to indicate its importance
2. Name the different refrigerants generally used. State the desirable properties of refrigerants.

**COURSE OUTCOME 5:** Compute and Interpret cooling and heating loads in an air-conditioning system **(Apply)**

1. A room  $7\text{m} \times 4\text{m} \times 4\text{m}$  is occupied by an air-water vapour mixture at  $38^{\circ}\text{C}$ . The atmospheric pressure is 1 bar and the relative humidity is 70%. Determine the humidity ratio, dew point, mass of dry air and mass of water vapour. If the mixture of air-water vapour is further cooled at constant pressure until the temperature is  $10^{\circ}\text{C}$ . Find the amount of water vapour condensed

2. A room has a sensible heat gain of 24 KW and a latent heat gain of 5.2KW and it has to be maintained at  $26^{\circ}\text{C}$  DBT and 50 % RH.  $180\text{ m}^3/\text{min}$  of air is delivered to the room. Determine the state of supply of air.

**Outcomes**

**Upon completion of the course, the students will be able to:**

- CO1 Illustrate the drivers and enablers of Industry 4.0 **(Apply)**  
 CO2 Demonstrate the smartness in Smart Factories, Smart cities, smart products and smart services. **(Apply)**  
 CO3 Show the various systems used in a manufacturing plant and their role in an Industry 4.0 world. **(Apply)**  
 CO4 Demonstrate the power of Cloud Computing in a networked economy. **(Apply)**  
 CO5 Illustrate the opportunities, challenges brought about by Industry 4.0 and how organisations and individuals should prepare to reap the benefits. **(Apply)**

**Textbooks**

1. Alasdair Gilchrist, "Industry 4.0: The Industrial Internet of Things", Apress, 2016.
2. Jesús Hamilton Ortiz, William Gutierrez Marroquin and Leonardo Zambrano Cifuentes .P, "Industry 4.0: Current Status and Future Trends", Open Access Peer-Reviewed Chapter, 2020.

**Reference Books**

1. Alp Ustundag, Emre Cevikcan, "Industry 4.0: Managing The Digital Transformation", Springer, 2018.
2. Diego Galar Pascual, Pasquale Daponte, Uday Kumar, "Handbook of Industry 4.0 and SMART Systems", 1<sup>st</sup> Edition, CRC Press. 2020.

**COURSE LEVEL ASSESSMENT QUESTIONS****COURSE OUTCOME 1**

1. Illustrate the developments of Industry 4.0 in USA. **(Understand)**
2. Compare and contrast the industry 4.0 factory and today's factory. **(Understand)**
3. Identify the technology applied in a smart factory like General Motors, USA. **(Apply)**

**COURSE OUTCOME 2**

1. Explain briefly the demarcation of embedded system with ubiquitous computing system. **(Understand)**
2. Sketch the core elements of cyber physical production system and control theory applicable to that and explain in detail. **(Apply)**
3. Draft a program to integrate the machine and computer for shop floor activity in a production centre. **(Apply)**

**COURSE OUTCOME 3**

1. Explain in detail the digital twins with an example. **(Understand)**
2. Sketch the basic configuration of augmented reality in manufacturing environment. **(Apply)**
3. Illustrate the application of AR in supporting assembly operation in an industry. **(Apply)**

**COURSE OUTCOME 4**

1. Explain how data is considered to be a new resource for organization. **(Understand)**
2. Describe the role of cloud computing in Industry 4.0 with an example. **(Understand)**
3. Review the resource based development in various world renowned firms like Toyota in adapting Industry 4.0. **(Apply)**

**COURSE OUTCOME 5**

1. Enumerate the various opportunities and challenges in running an organization currently. **(Understand)**
2. Identify the skills to be acquired by the man power to get encapsulated in present industrial scenario. **(Apply)**
3. Develop a strategy for competing in an industry 4.0 world. **(Apply)**

**Outcomes**

**Upon completion of the course, the students will be able to:**

- CO1 Illustrate the need and application of robots in different engineering fields. **(Apply)**  
 CO2 Show the different types of robot drive systems as well as robot end effectors. **(Apply)**  
 CO3 Apply the different image processing techniques in robotics to improve the ability of robots. **(Apply)**  
 CO4 Prepare robotic programs for different tasks and analyze the kinematics motions of robot. **(Apply)**  
 CO5 Demonstrate robots in various industrial sectors and interpolate the economic analysis of robots. **(Apply)**

## COURSE LEVEL ASSESSMENT QUESTIONS

### COURSE OUTCOME 1

1. With a neat sketch explain the anatomy of robot. **(Understand)**
2. Enumerate the future applications of robotics. **(Understand)**
3. Sketch and explain the four basic robot configurations classified according to the coordinate system. **(Apply)**

### COURSE OUTCOME 2

1. Differentiate pneumatic drive system with hydraulic drive system.**(Understand)**
2. Compare and contrast the various electrical drives especially Stepper motor and A.C. Servo motors.**(Understand)**
3. Discuss in detail about Vacuum grippers along with their advantages and disadvantages.**(Apply)**

### COURSE OUTCOME 3

1. Explain in detail the triangulation method of range sensing with a neat sketch. **(Understand)**
2. Sketch the four different approaches adopted for construction of artificial skins and explain them in detail. **(Understand)**
3. Apply the first principles of engineering specialization in resolving forces and moments between the end effectors. **(Apply)**

### COURSE OUTCOME 4

1. For the vector  $v = 25i + 10j + 20k$ , perform a translation by a z distance of 8 in the x direction, 5 in the y direction, and  $\Theta$  in the z direction. The translation transformation would be **(Apply)**

$$H=Trans(a,b,c) \begin{bmatrix} 1 & 0 & 0 & 8 \\ 0 & 1 & 0 & 5 \\ 0 & 0 & 1 & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix}$$

2. It is desired to determine the values to which the angles  $\Theta_1$  and  $\Theta_2$  must be set in order to achieve a certain point in space for the manipulator shown in Fig. 4.1. The length of joint 1,  $L_1 = 30.48$  cm, the length of joint  $L_2 = 25.4$  cm. The point Pw which the robot must achieve is defined by the coordinates  $x = 15.7$  and  $y = 12.6$ . Using the reverse transformation methods, determine the angles. **(Apply)**

Fig. 1 - A two dimensional 2 - degree of freedom manipulator

3. A jointed - arm robot of configuration VVR is to move all three axes so that the first joint is rotated through  $50^\circ$ , the second joint is rotated through  $90^\circ$  and the third joint is rotated through  $25^\circ$ . Maximum speed of any of these rotational joints is  $10^\circ/\text{s}$ . Ignore the effects of acceleration and deceleration. **(Apply)**

#### COURSE OUTCOME 5

1. Elucidate the different levels of safety sensor systems in robotics as prescribed by the National Bureau of Standards. **(Understand)**
2. Data have been collected for a certain robot model on times between breakdowns and it has been determined that the mean time between failures is 324 hours. Repairing the robot has required an average of 6.5 hours, according to the records of the maintenance department. Calculate the robot's availability. **(Apply)**
3. Suppose the present MTBF of a particular robot is 200 hours and the MTTR when breakdowns occur is 8 hrs. A preventive maintenance program is to be initiated in the plant which is expected to increase the MTBF to 300 hrs and reduce the MTTR to 6 hrs. Determine the effect of the PM program on the availability of the robot. **(Apply)**

| 21ME6717                                                                                                                                                                                                                                                                                                                                                                                                                                                      | MODERN MACHINING PROCESSES                                  | L        | T | P | C         |

## **COURSE LEVEL ASSESSMENT QUESTIONS**

### **COURSE OUTCOME 1: Enumerate the need for unconventional machining processes and its classification (Understand)**

1. Identify the principle of AJM. Mention some of the applications and limitations (Remember)
2. Discuss in detail about the arrangement of USM process and its process parameters (Understand)

### **COURSE OUTCOME 2: Discover various thermal energy and electrical energy based unconventional machining processes (Apply)**

1. Describe the mechanism of material removal in EDM. (Apply)
2. List out the process capabilities, advantages and limitations of LBM process (Remember)

### **COURSE OUTCOME 3: Summarize various chemical and electro-chemical energy based unconventional machining processes (Understand)**

1. Discuss various parameters that influence the performance of CH process (Remember)
2. Sketch the schematic arrangement of ECH process and its working (Understand)

### **COURSE OUTCOME 4: Summarize various nano abrasives based unconventional machining processes (Understand)**

1. Discuss about the process capabilities of AFM and the process parameters of AFM in improving machining quality (Understand)
2. List out the important process parameters that control the material removal rate in micro-LBM? Explain any four factors (Remember)

### **COURSE OUTCOME 5: Enumerate recent trends based unconventional machining processes (Remember)**

1. Describe the comparison of non-traditional machining process (Remember)
2. List out the process parameters that influence the micro-USM process (Remember)

## **COURSE LEVEL ASSESSMENT QUESTIONS**

### **COURSE OUTCOME 1: Classify various joining processes and identify welding symbols, joints and edge preparation (Understand)**

1. Discuss the principle of MIAB. Mention some of the applications and limitations (Understand)
2. Explain the arrangement of USW process and its limitations (Understand)

### **COURSE OUTCOME 2: Identify various solid state joining methods and its equipment's (Understand)**

1. List out the applications of diffusion welding process. (Remember)
2. Discuss the process capabilities, advantages and limitations of pressure non-fusion welding process (Understand)

### **COURSE OUTCOME 3: Illustrate friction welding, process parameters and its types (Apply)**

1. Differentiate between linear and angular FW (Understand)
2. Demonstrate the schematic arrangement of friction taper stitch welding and its working (Apply)

### **COURSE OUTCOME 4: Identify welding defects and their causes, destructive and non-destructive testing of welds (Understand)**

1. List out the defects involved in welding process (Understand)
2. Discuss about the material changes during solid state joining process and its impacts (Understand)

### **COURSE OUTCOME 5: Discuss various tool materials in solid state joining process and industrial applications (Understand)**

1. Enumerate the tools involved in FSW (Remember)
2. Discover the industrial applications related to solid state joining process (Understand)

..

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Illustrate the skills for successful entrepreneurs (Apply)**

1. Discover the main functions performed by the entrepreneurs (Apply)
2. Explain the factors affecting growth of entrepreneurship (Understand)

**COURSE OUTCOME 2: Explain the concepts of entrepreneurship failure (Understand)**

1. Describe achievement motivation? Do you consider it an essential ingredient of entrepreneurship? (Remember)
2. Define the term stress? It is always bond for people? Explain. (Understand)

**COURSE OUTCOME 3: Discover market survey and techno economic feasibility assessment (Apply)**

1. List out the factors to be considered while preparing a feasibility report (Remember)
2. Illustrate the major steps in detailed project report? What are the precautions than an entrepreneur should take at the time of preparation of detailed project report? (Apply)

**COURSE OUTCOME 4: Identify the funds from financial source (Understand)**

1. Define the term Sales Tax? Elaborate the types of sales taxation in India (Understand)
2. Discuss the various causes and consequences of industrial sickness in India (Understand)

**COURSE OUTCOME 5: Identify and correct sickness in business (Understand)**

1. Discuss the need for policy support to small scale enterprises (Understand)
2. Describe Joint Venture. State the reasons behind creation of joint venture (Understand)

|                                                                                                                                                                                                                                                                                                                                                                                              |                                                            |                                      |          |          |           |

**COURSE LEVEL ASSESSMENT QUESTIONS****COURSE OUTCOME 1: Remember various basic aspects of corrosion (Remember)**

1. Explain the chemical treatment for stainless steel and other alloys that enhances the ability of the treated surfaces to resist corrosion. **(Remember)**
2. Draw the Pourbaix diagram for iron-water system and interpret. Bring out its advantage and limitations **(Remember)**

**COURSE OUTCOME 2: Enumerate the various forms of corrosion. (Understand)**

1. Deduce the construction and working of the autocatalytic mechanism of pitting corrosion. Mention the means of combating pitting corrosion **(Understand)**
2. Identify and explain which material can dezincification take place in and label its consequences. **(Understand)**

**COURSE OUTCOME 3: Apply the corrosion control methods in the manufacturing of components (Apply)**

4. Apply the suitable protection method to mitigate corrosion damage to active metal surfaces **(Apply)**
1. Select the widely used temporary corrosion preventive methods to avoid rusting and justify. **(Apply)**

**COURSE OUTCOME 4: Apply the surface modification and surface coating techniques in the production of components (Apply)**

1. Apply the best coating method of nickel also label its advantages and limitations compared to the PVD methods. **(Apply)**
2. Name the surface modification technique and illustrate the process based on the given applications like sand removal in foundries, decoding, descaling, and surface finishing for castings used in engine blocks and cylinder heads **(Apply)**

**COURSE OUTCOME 5: Apply the advanced surface modification techniques in production of components (Apply)**

1. Identify and illustrate the advanced surface modification technique which can able to heat treat localized areas without affecting the entire work piece. **(Apply)**
2. Apply the thermal high speed heat treatment processes in solid and or liquid state **(Apply)**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1:** Show the dimensions of components and identify the suitable geometrical tolerances for manufacturing-oriented design **(Apply)**

1. Illustrate about the assembly limits, Datum features and tolerance stack
2. explain about design principle which used in manufacturability

**COURSE OUTCOME 2:** Determine the suitable materials for components and demonstrate the design considerations for assembly in different applications **(Apply)**

1. Discuss in detail about the design for assembly
2. Show the steps involved in minimizing the material usage

**COURSE OUTCOME 3:** Illustrate suitable design recommendations for various machining operations. **(Apply)**

1. Write down difference between clamp ability and accessibility.
2. Explain in detail about reduction of machine area by simplification by separation with suitable sketch.

**COURSE OUTCOME 4:** Demonstrate the design for injection molded components and apply the design recommendations for powder metal processing. **(Apply)**

1. Briefly discuss the factors to be considered while selecting the injection molding
2. Describe in detail on design guidelines for Powder Metal Parts

**COURSE OUTCOME 5:** Determine the uneconomical design for sand and die castings. **(Apply)**

1. Show the factors involved in uneconomical design.
2. Discuss in detail about casting requiring special sand cores.

### **COURSE LEVEL ASSESSMENT QUESTIONS**

#### **COURSE OUTCOME 1: Interpret ergonomics need in the industrial design (Remember, Understand)**

1. What are the objectives in industrial ergonomics **(Remember)**
2. Draw the human – machine systems and its components **(Understand)**

#### **COURSE OUTCOME 2: Apply ergonomics in creation of manufacturing system (Understand, Apply)**

1. Explain Anthropometric data and its application in ergonomics. **(Understand)**
2. Describe about simplicity, regularity and proximity **(Apply)**

#### **COURSE OUTCOME 3: Discuss on design of controls and display (Remember, Apply)**

1. Name five types of display and one example each? **(Remember)**
2. Write the design controls in automobiles and machine tools with examples **(Apply)**

#### **COURSE OUTCOME 4: Consider environmental factors in ergonomics design. (Understand, Apply)**

1. Explain munsell colour system. **(Apply)**
2. What is colour circle? And its application **(Understand)**

#### **COURSE OUTCOME 5: Report on importance of aesthetics to manufacturing system and product (Understand, Apply)**

1. Describe aesthetic expressions in industrial ergonomics **(Apply)**
2. What are the ways of using industrial designers?**(Understand)**.

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Explain and calculate the governing equations for fluid flow. (Remember, Understand)**

1. How is Partial Differential Equation Classified? **(Remember)**
2. Derive an expression for the explicit method for supersonic flow . **(Understand)**

**COURSE OUTCOME 2: Explain how grids are generated. (Remember, Understand)**

1. Write an application of C-grid**(Remember)**
2. Explain the concept of grid generation using laplace’s equation with examples. **(Understand)**

**COURSE OUTCOME 3: Describe the issues about two-phase flow modelling. (Remember, Understand, Apply)**

1. Write the types of Algorithms. **(Remember)**
2. Write down the application of panel methods to subsonic and supersonic flows **(Understand)**
3. Interpret the results of flow over a cylinder for lifting cases using Numerical simulation techniques. **(Apply)**

**COURSE OUTCOME 4: Apply the concept of discretization, upwind differencing and implicit, explicit solutions. (Remember, Understand, Apply)**

1. Compare the stability aspect of explicit and implicit equation solving approaches. **(Remember)**
2. Derive an expression for solving 2D unsteady heat transfer problem using implicit scheme and finite volume method. **(Understand)**
3. Demonstrate the concept of explicit methods in Unsteady transonic flow around aerofoils. **(Apply)**

**COURSE OUTCOME 5: Apply finite difference and finite volume methods to fluid flow problems. (Remember, Understand, Apply)**

1. State the cell vertex formulation. **(Remember)**
2. Explain the Runge-Kutta Time stepping method in detail with emphasis on stability and accuracy of the method. **(Understand)**
3. Illustrate with suitable example for the conservative upwind discretization of hyperbolic system. **(Apply)**

**Outcomes**

**Upon completion of the course, the students will be able to:**

- CO1.** List the factors that impact the heating & cooling loads in buildings **(Remember)**
- CO2.** Discuss the internal and external cooling loads on a building by separating sensible and latent Parts **(Apply)**
- CO3.** Analyze the heating & cooling loads and Design an HVAC system for a residential or commercial building **(Analyze)**
- CO4.** Analyze the various HVAC systems available and selecting the most appropriate one **(Analyze)**
- CO5.** Select appropriate air heating system for a particular location and application **(Analyze)**

**Text Books**

1. HVAC Fundamentals Volume-I / James E. Brumbou / Audel / 4th Edition

**Reference Books**

1. Fundamentals of HVAC Systems / Robert Mcdowall / Academic Press / 2007
2. Home Heating & Air Conditioning systems / James Kittle / MGH
3. HVAC Fundamentals / Samuel C. Sugarman / Fairmont Press / 2005.
4. Principles of Refrigeration – Dossat, Pearson
5. R&AC Hand Book by ISHRAE

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1** List the factors that impact the heating & cooling loads in buildings **(Remember)**

1. Apply insulation considerations: If there is insulation present in the walls or roofs, consider its thermal resistance (R-value) and its impact on reducing heat transfer. The R-value represents the resistance to heat flow and should be included in the calculations. **(Remember)**
2. Understand the heat transfer mechanisms: Heat transfer can occur through conduction, convection, and radiation. It's important to consider these mechanisms while calculating the heat transfer. **(Understand)**

**COURSE OUTCOME 2:** Discuss the internal and external cooling loads on a building by separating sensible and latent Parts **(Apply)**

1. Solar radiation impact: How does solar radiation affect heating loads? **(Remember)**
2. Internal heat sources: What role do internal heat sources play in heating loads? **(Apply)**

**COURSE OUTCOME 3:** Analyze the heating & cooling loads and Design an HVAC system for a residential or commercial building **(Analyze)**

1. Components and layout: What components are involved in HVAC system design, and how should they be laid out? **(Understand)**
2. Load calculations: How are load calculations performed in HVAC system design? **(Analyze)**

**COURSE OUTCOME 4:** Analyze the various HVAC systems available and selecting the most appropriate one **(Analyze)**

1. Types of air conditioning systems: What are the different types of air conditioning systems available? **(Understand)**
2. Cooling capacity: How is the cooling capacity of an air conditioning system determined? **(Analyze)**

**COURSE OUTCOME 5:** Select appropriate air heating system for a particular location and application **(Analyze)**

1. Cooling load profile: How is the cooling load profile determined in a building? **(Understand)**
2. Fan and pump power: Specify the factors affect the power consumption of fans and pumps in HVAC systems? **(Apply)**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Select the process, equipment and tools for various industrial products (Remember, Understand)**

1. What are parameters to determine the tool performance? **(Remember)**
2. Explain basic steps involve in process planning. **(Understand)**

**COURSE OUTCOME 2: Prepare process planning activity chart. (Remember, Understand)**

1. What are the functions of jig and fixture? **(Remember)**
2. Explain the various quality assurance methods in detail. **(Understand)**

**COURSE OUTCOME 3: Explain the concept of cost estimation (Remember, Understand, Apply)**

1. Distinguish cost estimation and cost accounting. **(Remember)**
2. From the following data provided by a mask machine manufacturer, find prime cost, factory cost, production cost, total cost and profit

| Items                                      | INR      |
|--------------------------------------------|----------|
| Value of stock material as on 1-07-2021    | 52,000   |
| Material purchased                         | 5,48,000 |
| Wages to workers                           | 2,40,000 |
| Depreciation of plant and machinery        | 16,000   |
| Depreciation of office equipment           | 4,000    |
| Rent, taxes and insurance                  | 32,000   |
| General administrative expenses            | 6,800    |
| Water, power and telephone bill of factory | 19,200   |
| Water, power and telephone bill of office  | 5,000    |
| Transportation in factory                  | 4,000    |
| Insurance and rent of office building      | 4,000    |
| Direct expenses                            | 1,00,000 |
| Commission and pay of salesman             | 21,000   |

|                                          |                                |
|------------------------------------------|--------------------------------|
| Repair and maintenance                   | 2,000                          |
| Production Managers salary               | 60,000                         |
| Salary of office staff                   | 1,20,000                       |
| Value of stock of material on 30-06-2021 | 72,000                         |
| Sale of products                         | 12,72,000. <b>(Understand)</b> |

3. Find out the production cost per gear for a transmission unit in automobile from the following data.

|                                             |                        |
|---------------------------------------------|------------------------|
| Charges for forging per kg                  | Rs. 22.5               |
| Wrought iron used per month @ Rs. 90 per Kg | 27 tonnes              |
| Wages of operator                           | Rs. 450/day            |
| No of operator employed                     | 36                     |
| Cartage/day                                 | Rs. 2,250              |
| Deprecation of machines and tools           | Rs. 4500 per month     |
| Wages of helpers                            | Rs. 270 per day each   |
| No of helpers employed                      | 8                      |
| Salary of supervisor                        | Rs. 45,000 per month   |
| Packing charges for 108 gears               | Rs. 360                |
| Electric charges                            | Rs. 11700 Per month    |
| Salary of manager and maintenance staff     | Rs. 1,26,000 per month |

If 13,500 gears are to be produced per month and factory runs 26 days a month at 8 hour shift then what should be the selling price of each gears so as to earn profit of 20 percentage of factory cost? **(Apply)**

**COURSE OUTCOME 4: Compute the job order cost for different type of shop floor (Remember, Understand, Apply)**

1. What is shrinkage allowance? **(Remember)**
2. Calculate the cost of forging a crank shaft as show in figure 1 below using the following data available. The forging is to be made out of 50 mm dia.

|                       |                       |
|-----------------------|-----------------------|
| Material price        | Rs.100 per kg         |
| Direct labour charges | Rs. 43 per piece      |
| Overhead charges      | 150% of material cost |
| Density               | 7.5 g/cc              |
| Losses                | 28% of net weight     |

Figure 1

**(Understand)**

3. Calculate the cost of welding two pieces of mild steel sheets each 2 meters long and 7 mm thick. A 60° V is prepared by means of gas cutting before welding is to be commenced. The cost of oxygen is Rs. 7/cumeter and acetylene is Rs. 4/cu meter. The filler metal costs Rs. 20 per kg.

The following data is also available :

For gas cutting (10 mm thick plate)

|                          |             |
|--------------------------|-------------|
| Cutting speed            | 20 m/hr     |
| Consumption of oxygen    | 2 cu m/hr   |
| Consumption of acetylene | 0.2 cu m/hr |

Data for rightward welding

|                          |             |
|--------------------------|-------------|
| Consumption of oxygen    | 0.8 cu m/hr |
| Consumption of acetylene | 0.8 cu m/hr |
| Dia of filler rod used   | 3.5 mm      |

Filler rod used per meter of weld 3.4 m

Rate of welding 3 m/hr

Density of filler metal 8 g/cc **(Apply)**

**COURSE OUTCOME 5: Calculate the machining time for various machining operations. (Remember, Understand, Apply)**

1. What is tear down time? **(Remember)**
2. A 400 mm × 60 mm rectangular cast iron piece is to be face milled with a carbide cutter. The cutting speed and feed are 60 m/min and 60 m/mm. If the cutter dia is 80 mm with 12 cutting teeth. Find cutter r.p.m. feed per tooth, milling time. **(Understand)**
3. Calculate the machining time to drill eight 8 mm dia holes and one 40 mm dia central hole in the flange shown below (Figure 2). With cutting speed 10 m/min, feed for 8 mm drill 0.1 mm/rev, 40 mm drill is 0.4 mm/rev, 20 mm dia drill 0.2 mm/rev.

Figure 2

**(Apply)**

| 21ME7706                                                                                                                                                                                                                                                                  | INDUSTRIAL INTERNET OF THINGS                                   | L                                                                 | T | P                                    | C         |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------|-------------------------------------------------------------------|---|--------------------------------------|-----------|
|                                                                                                                                                                                                                                                                           |                                                                 | 3                                                                 | 0 | 0                                    | 3         |
| <b>Prerequisites for the course</b>                                                                                                                                                                                                                                       |                                                                 |                                                                   |   |                                      |           |
| Nil                                                                                                                                                                                                                                                                       |                                                                 |                                                                   |   |                                      |           |

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Interpret the company’s performance using IoT (Understand)**

1. How IOT is working in oil & gas industry. Explain in detail (Remember)
2. Compare IOT and IIOT in terms of functionality, connectivity and usage (Understand)

**COURSE OUTCOME 2: Discuss the different styles of technical and business innovators (Understand)**

1. Compare artificial intelligence & machine learning (Understand)
2. Outline the domains where fog computing is used (Understand)

**COURSE OUTCOME 3: Identify various IIoT Architectures related to data management system (Apply)**

1. List out the viewpoints in industrial internet (Remember)
2. Build the framework of industrial internet architecture (Apply)

**COURSE OUTCOME 4: Organize the design of Industrial Internet Systems (Apply)**

1. Outline RS232 Serial Communication Protocol working and specifications (Understand)
2. Identify the modes of data transfer in serial communication (Apply)

**COURSE OUTCOME 5: Construct a Middleware software system related to proximity edge networks (Apply)**

1. Classify the seven software design patterns and explain with an example (Understand)
2. Construct the architecture of TCP/IP Protocol in IIOT (Apply)

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Interpret the methods of manufacturing cylindrical gears (Understand)**

1. List out the different types of cylindrical gears. Explain in detail (Remember)
2. Describe the rack type gear shaping machine (Understand)

**COURSE OUTCOME 2: Discuss the manufacturing methods of conical gears (Understand)**

1. Describe the straight bevel gear & spiral bevel gear (Understand)
2. Outline the duplex rotary cutter method where it is used (Understand)

**COURSE OUTCOME 3: Illustrate the gear materials and hardening methods (Apply)**

1. List out the viewpoints in hardening process (Remember)
2. Illustrate the selection of gear materials for transmission system (Apply)

**COURSE OUTCOME 4: Examine the gear quality and standards (Apply)**

1. Discuss the various gear inspection methods (Understand)
2. Identify the gear failures and remedies (Apply)

**COURSE OUTCOME 5: Describe the mass production methods and systems of gears (Apply)**

1. Classify the mass production methods of gears (Understand)
2. Illustrate the die casting and powder metallurgy process (Apply)

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Illustrate the concepts of precision engineering and machining accuracy (Understand)**

1. List out the various types of precision process. Explain in detail **(Remember)**
2. Describe the ultra-precision process and nanotechnology **(Understand)**

**COURSE OUTCOME 2: Explain the working principle of different precision machining process. (Understand)**

1. Describe the working of electro chemical micro machining process **(Understand)**
2. Discuss the laser beam machining. where it is used **(Understand)**

**COURSE OUTCOME 3: Choose the basic design requirements for the construction of precision machine tools. (Apply)**

1. Describe the Construction and Application of Rolling **(Remember)**
2. Illustrate the working of hydrostatic and hydrodynamic bearings **(Apply)**

**COURSE OUTCOME 4: Identify various errors affecting the accuracy of precision manufacturing (Apply)**

1. Discuss the error mapping and error budgets **(Understand)**
2. Identify the various error affecting the precision manufacturing **(Apply)**

**COURSE OUTCOME 5: Apply a suitable measurement technique to measure and characterize the features of precision machined components. (Apply)**

1. Differentiate the scanning electron microscope and scanning probe microscope **(Understand)**
2. Illustrate the white Light Interference 3D Microscopes **(Apply)**

**Upon completion of the course, the students will be able to:**

- CO1:** Apply the classical optimization techniques to solve the problems. **(Apply)**  
**CO2:** Solve problems using linear and nonlinear programming techniques **(Apply)**  
**CO3:** Apply the constrained and unconstrained optimization techniques to solve problems **(Apply)**  
**CO4:** Use the evolutionary algorithms for the multivariable problems. **(Apply)**  
**CO5:** Solve multivariable problems using Ant colony and fuzzy system optimization methods **(Apply)**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Students will be able to Apply the classical optimization techniques to solve the problems. (Apply)**

1. Ten jobs are to be performed in an automobile assembly line as noted in the following table:

| Job number | Time required to complete the job (min) | Jobs that must be completed before starting this job |
|------------|-----------------------------------------|------------------------------------------------------|
| 1          | 4                                       | None                                                 |
| 2          | 8                                       | None                                                 |
| 3          | 7                                       | None                                                 |
| 4          | 6                                       | None                                                 |
| 5          | 3                                       | 1, 3                                                 |
| 6          | 5                                       | 2, 3, 4                                              |
| 7          | 1                                       | 5, 6                                                 |
| 8          | 9                                       | 6                                                    |
| 9          | 2                                       | 7, 8                                                 |
| 10         | 8                                       | 9                                                    |

It is required to set up a suitable number of workstations, with one worker assigned to each workstation, to perform certain jobs. Formulate the problem of determining the number of workstations and the particular jobs to be assigned to each workstation to minimize the idle time of the workers as an integer programming problem.

Hint: Define variables  $x_{ij}$  such that  $x_{ij} = 1$  if job  $i$  is assigned to station  $j$ , and  $x_{ij} = 0$  otherwise.

2. A pipe of length  $l$  and diameter  $D$  has at one end a nozzle of diameter  $d$  through which water is discharged from a reservoir. The level of water in the reservoir is maintained at a constant value  $h$  above the center of nozzle. Find the diameter of the nozzle so that the kinetic energy of the jet is a maximum. The kinetic energy of the jet can be expressed as

$$\frac{1}{4} \pi \rho d^2 \left( \frac{2gD^5 h}{D^5 + 4fld^4} \right)^{3/2}$$

Where  $\rho$  is the density of water,  $f$  the friction coefficient and  $g$  the gravitational constant.

**COURSE OUTCOME 2: Solve problems using linear and nonlinear programming techniques (Apply)**

State the following LP problem in standard form:

$$\text{Maximize } f = -2x_1 - x_2 + 5x_3$$

subject to

$$x_1 - 2x_2 + x_3 \leq 8$$

$$3x_1 - 2x_2 \geq -18$$

$$2x_1 + x_2 - 2x_3 \leq -4$$

Find the solution of the following LP problem graphically:

$$\text{Maximize } f = 2x_1 + 6x_2$$

subject to

$$-x_1 + x_2 \leq 1$$

$$2x_1 + x_2 \leq 2$$

$$x_1 \geq 0, \quad x_2 \geq 0$$

**COURSE OUTCOME 3: Apply the constrained and unconstrained optimization techniques to solve problems (Apply)**

1. Find the minimum of the function  $f = \lambda^5 - 5\lambda^3 - 20\lambda + 5$  by the following methods:
  - (Apply) Unrestricted search with a fixed step size of 0.1 starting from  $\lambda = 0.0$
  - (b) Unrestricted search with accelerated step size from the initial point 0.0 with a starting step length of 0.1
  - (c) Exhaustive search in the interval (0,5)
  - (d) Dichotomous search in the interval (0,5) with  $\delta = 0.0001$
  - (e) Interval halving method in the interval (0,5)
  - (f) Fibonacci search in the interval (0,5)
  - (g) Golden section method in the interval (0,5)

2.

A bar is subjected to an axial load,  $P_0$ , as shown in Figure 6.17. By using a one-finite-element model, the axial displacement,  $u(x)$ , can be expressed as [6.1]

$$u(x) = \{N_1(x) \quad N_2(x)\} \begin{Bmatrix} u_1 \\ u_2 \end{Bmatrix}$$

where  $N_i(x)$  are called the shape functions:

$$N_1(x) = 1 - \frac{x}{l}, \quad N_2(x) = \frac{x}{l}$$

and  $u_1$  and  $u_2$  are the end displacements of the bar. The deflection of the bar at point  $Q$  can be found by minimizing the potential energy of the bar ( $f$ ), which can be expressed as

$$f = \frac{1}{2} \int_0^l EA \left( \frac{\partial u}{\partial x} \right)^2 dx - P_0 u_2$$

where  $E$  is Young's modulus and  $A$  is the cross-sectional area of the bar. Formulate the optimization problem in terms of the variables  $u_1$  and  $u_2$  for the case  $P_0/EA = 1$ .

**COURSE OUTCOME 4: Use the evolutionary algorithms for the multivariable problems (Apply)**

1.

Consider the following two strings denoting the vectors  $X_1$  and  $X_2$

$$X_1 : \{1000101101\}$$

$$X_2 : \{0111110110\}$$

Find the result of crossover at location 2. Also, determine the decimal values of the variables before and after crossover if each string denotes a vector of two variables.

2.

Find the maximum of the function  $f = -x^5 + 5x^3 + 20x - 5$  in the range  $-4 \leq x \leq 4$  using the PSO method. Use 4 particles with the initial positions  $x_1 = -2, x_2 = 0, x_3 = 1,$  and  $x_4 = 3$ . Show detailed calculations for 2 iterations.

**COURSE OUTCOME 5: Solve multivariable problems using Ant colony and fuzzy system optimization methods. (Apply)**

1. Find the minimum of the function  $f(x) = x^2 - 2x - 11$  in the range  $(0, 3)$  using the ant colony optimization method. **(Apply)**

2. Two discrete fuzzy sets, A and B are defined as follows:

$$A = \{(60, 0.1) (62, 0.5) (64, 0.7) (66, 0.9) (68, 1.0) (70, 0.8)\}$$

$$B = \{(60, 0.0) (62, 0.2) (64, 0.4) (66, 0.8) (68, 0.9) (70, 1.0)\}$$

Determine the union and intersection of these sets. **(Apply)**

| 21ME7710                                                                                                                                                                                                                                                                                                                  | VEHICLE STYLING AND DESIGN                                      | L                                                                 | T | P                                    | C         |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------|-------------------------------------------------------------------|---|--------------------------------------|-----------|
|                                                                                                                                                                                                                                                                                                                           |                                                                 | 3                                                                 | 0 | 0                                    | 3         |
| <b>Prerequisites for the course</b>                                                                                                                                                                                                                                                                                       |                                                                 |                                                                   |   |                                      |           |
| Nil                                                                                                                                                                                                                                                                                                                       |                                                                 |                                                                   |   |                                      |           |

#### COURSE LEVEL ASSESSMENT QUESTIONS

##### COURSE OUTCOME 1: Illustrate the concepts of vehicle interior and exterior parts design (Understand)

1. Discuss the interior and exterior design for two-wheeler vehicle. **(Understand)**
2. Enlist various types of sketches used for four-wheeler vehicle **(Remember)**

##### COURSE OUTCOME 2: Select engine and transmission of a vehicle for a particular application. (Understand)

1. How to design a transmission system for a passenger car? **(Remember)**
2. Discuss on the factors considered in selecting orientation of engine, fuel, method of cooling for given vehicle layout and requirement. **(Understand)**

##### COURSE OUTCOME 3: Determine forces in engine crank mechanism. (Apply)

1. Describe the expressions for instantaneous piston velocity, piston acceleration, connecting rod angular velocity and angular acceleration at any crank angle? **(Remember)**
2. Design a detailed procedure of engine crank mechanism **(Apply)**

##### COURSE OUTCOME 4: Suggest suitable firing order for engines by balancing forces and moments. (Apply)

1. Prove that 4-stroke, 6-cylinder engine with firing order of 1-5-3-6-2-4 is completely balanced. **(Apply)**
2. Choose a firing order for 4-stroke, 4 - cylinder engine, based on engine balancing. **(Understand)**

**COURSE OUTCOME 5: Describe the test procedures, standards and norms for an automobile/sub system. (Understand)**

1. Write down BS-IV norms for 2&3 wheelers powered by petrol. **(Understand)**
2. Discuss how rotation bending fatigue test and radial load durability test are done on alloy wheel rims of 2-wheelers. **(Understand)**

**PROFESSIONAL  
ELECTIVE - V**

## COURSE LEVEL ASSESSMENT QUESTIONS

### **COURSE OUTCOME 1: Outline the need for Integrated Product and Process Design (Understand)**

1. Explain the phases of generic product development process and point out the tasks and responsibilities of the organization **(Remember)**
2. Briefly explain the organizational policies for product planning, process management and improvement of product **(Understand)**

### **COURSE OUTCOME 2: Illustrate the structured approaches in concept generation. (Apply)**

1. How can the concept selection methods be used to benchmark existing products. Perform such an evaluation for five automobile you might consider purchasing **(Understand)**
2. Prepare an external - search plan for the problem of permanently applying serial numbers to plastic products **(Apply)**

### **COURSE OUTCOME 3: Apply the principles of product architecture in component standardization (Apply)**

1. Summarize the design issues that make an impact in related system of product architecture **(Remember)**
2. Describe the four-step method to structure the decision process, using the desk jet printer, with a geometric layout **(Apply)**

### **COURSE OUTCOME 4: Develop integrated environment for industrial design. (Apply)**

1. Is Industrial Design Worth the Investment? Explain with respect to, singular architecture and integral architecture **(Apply)**
2. Explain the need for CAE/CAD/CAM in Industrial design, using suitable illustrations **(Understand)**

### **COURSE OUTCOME 5: Examine the economic aspects of product development (Apply)**

1. Summarize the reasons why reducing the number of parts in a product might reduce production costs. Also explain some reasons why costs might increase **(Apply)**
2. What would you expect to be some of the characteristics of individuals who successfully lead project teams? Explain them in detail **(Apply)**.

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Students will be able to Identify product data, information, structures and PLM concepts. (Understand)**

1. Mention the need for PLM (**Remember**)
2. List the reasons for the deployment of PLM systems (**Understand**)

**COURSE OUTCOME 2: Students will be able to develop the functions and features of PLM/PDM (Apply)**

1. Discuss the relationship between version and revision with an illustration (**Apply**)
2. Elaborate the technologies related to document management with suitable illustration (**Apply**)

**COURSE OUTCOME 3: Students will be able to Recognize tools and standards for digital manufacturing and integration of PLM (Understand)**

1. Explain in detail digital manufacturing (**Understand**)
2. Explain the process of creation of 3DXML and CAD software tools (**Understand**)

**COURSE OUTCOME 4: Students will be able to apply PLM concepts through collaborative product development (Apply)**

1. Sketch the architecture of collaborative product commerce and explain its challenges **(Apply)**
2. Explain the steps involved in the prototype development through collaborative approach **(Apply)**

**COURSE OUTCOME 5: Students will be able to Interpret the implement PLM approaches for industrial applications (Understand)**

1. Explain the consequences of the ten step approach **(Understand)**
2. Develop a suitable case study for the selection of PLM **(Apply)**

|          |                       | 3 | 0 | 0 | 3 |

**Prerequisites for the course:**

**Engineering Thermodynamics, Thermal Engineering**

**Objectives**

- To provide the knowledge of evolution of low temperature science.
- To provide knowledge on the properties of materials at low temperature
- To familiarize with various gas liquefaction and refrigeration systems and to provide design aspects of cryogenic storage and transfer lines.

|                                                                                                                                                                                                                                                                                                                                                              |                                                           |           |

**Course Outcomes**

**Upon completion of the course, the students will be able to:**

**C01:** Outline the scope and history of cryogenics and to understand the properties of materials at low temperature applying fundamental knowledge. **(Understand)**

**C02:** Apply the knowledge of low temperature production methods to understand and analyze different liquefaction systems. **(Apply)**

**C03:** Apply the knowledge of ideal refrigeration techniques, to understand and analyse common cryogenic refrigeration systems. **(Apply)**

**C04:** Summarize various cryogenic fluid storage and transport systems and to evaluate their performance applying fundamental concepts **(Understand)**

**C05:** Discuss cryo pumping and cryogenic instrumentation. **(Understand)**

### COURSE LEVEL ASSESSMENT QUESTIONS

**COURSE OUTCOME 1: Students will be able to outline the scope and history of cryogenics and to understand the properties of materials at low temperature applying fundamental knowledge. (Understand)**

1. Explain the historical development of cryogenics. **(Remember)**
2. Explain how the ultimate and yield strengths of engineering materials change with cryogenic temperature? **(Understand)**

**COURSE OUTCOME 2: Students will be able Apply the knowledge of low temperature production methods to understand and analyze different liquefaction systems. (Apply)**

1. With a neat sketch, explain any one system for the liquefaction of Hydrogen. Derive expressions for liquid yield and work of liquefaction. **(Understand)**
2. Prove that COP of an ideal Stirling cycle refrigerator is same as that of Carnot refrigerator. **(Apply)**

**COURSE OUTCOME 3: : Students will be able to apply the knowledge of ideal refrigeration techniques, to understand and analyse common cryogenic refrigeration systems. (Apply)**

1. Illustrate the working of a simple cascade gas liquefaction system **(Apply)**
2. Explain the working of cryogenic refrigeration system with suitable example. **(Understand)**

**COURSE OUTCOME 4: Students will be able to summarize various cryogenic fluid storage and transport systems and to evaluate their performance applying fundamental concepts (Understand)**

1. Discuss the principles of storage and handling cryogenic fluid. **(Understand)**
2. Write short notes on insulations used in cryogenic applications. **(Understand)**

**COURSE OUTCOME 5: Students will be able to discuss cryo pumping and cryogenic instrumentation. (Understand)**

1. With neat sketch explain any three types of heat exchangers used in cryogenic systems. **(Understand)**
2. Explain any one pressure measurement system used in cryogenic applications. **(Understand)**

**Prerequisites for the course**

Engineering Thermodynamics, Thermal Engineering

**Objectives**

- Providing an overview of Power Plants and detailing the role of Mechanical Engineers in their operation and maintenance

|               |                                        |          |
|---------------|----------------------------------------|----------|
| <b>UNIT I</b> | <b>COAL BASED THERMAL POWER PLANTS</b> | <b>9</b> |
|---------------|----------------------------------------|----------|

Rankine cycle - improvisations, Layout of modern coal power plant, Super Critical Boilers, FBC Boilers, Turbines, Condensers, Steam & Heat rate, Subsystems of thermal power plants – Fuel and ash handling, Draught system, Feed water treatment. Binary Cycles and Cogeneration systems.

|                |                                                            |          |
|----------------|------------------------------------------------------------|----------|
| <b>UNIT II</b> | <b>DIESEL, GAS TURBINE AND COMBINED CYCLE POWER PLANTS</b> | <b>9</b> |
|----------------|------------------------------------------------------------|----------|

Otto, Diesel, Dual & Brayton Cycle - Analysis & Optimisation. Components of Diesel and Gas Turbine power plants. Combined Cycle Power Plants. Integrated Gasifier based Combined Cycle systems.

|                 |                             |          |
|-----------------|-----------------------------|----------|
| <b>UNIT III</b> | <b>NUCLEAR POWER PLANTS</b> | <b>9</b> |
|-----------------|-----------------------------|----------|

Basics of Nuclear Engineering, Layout and subsystems of Nuclear Power Plants, Working of Nuclear Reactors : Boiling Water Reactor (BWR), Pressurized Water Reactor (PWR), CANada Deuterium-Uranium reactor (CANDU), Breeder, Gas Cooled and Liquid Metal Cooled Reactors. Safety measures for Nuclear Power plants.

|                |                                    |          |
|----------------|------------------------------------|----------|
| <b>UNIT IV</b> | <b>POWER FROM RENEWABLE ENERGY</b> | <b>9</b> |
|----------------|------------------------------------|----------|

Hydro Electric Power Plants – Classification, Typical Layout and associated components including Turbines. Principle, Construction and working of Wind, Tidal, Solar Photo Voltaic (SPV), Solar Thermal, Geo Thermal, Biogas and Fuel Cell power systems.

|               |                                                                  |          |
|---------------|------------------------------------------------------------------|----------|
| <b>UNIT V</b> | <b>ENERGY, ECONOMIC AND ENVIRONMENTAL ISSUES OF POWER PLANTS</b> | <b>9</b> |
|---------------|------------------------------------------------------------------|----------|

Power tariff types, Load distribution parameters, load curve, Comparison of site selection criteria, relative merits & demerits, Capital & Operating Cost of different power plants. Pollution control technologies including Waste Disposal Options for Coal and Nuclear Power Plants.

|                      |           |
|----------------------|-----------|
| <b>Total Periods</b> | <b>45</b> |
|----------------------|-----------|

**Suggestive Assessment Methods**

| <b>Continuous Assessment Test (20 Marks)</b>                  | <b>Formative Assessment Test (20 Marks)</b>                       | <b>End Semester Exams (60 Marks)</b> |
|---------------------------------------------------------------|-------------------------------------------------------------------|--------------------------------------|
| CAT 1 – 10 MARKS<br>CAT 2 – 10 MARKS<br>DESCRIPTIVE QUESTIONS | 1.Assignment<br>2. Online Quizzes<br>3.Problem-Solving Activities | 1. Descriptive Questions             |

**Course Outcomes**

**Upon completion of the course, the students will be able to:**

- CO.1** Illustrate the layout, construction and working of the components inside a thermal power plant.
- CO.2** Illustrate the layout, construction and working of the components inside a Diesel, Gas and Combined cycle power plants.
- CO.3** Illustrate the layout, construction and working of the components inside nuclear power plants.
- CO.4** Illustrate the layout, construction and working of the components inside Renewable energy power plants.
- CO.5** Estimate the costs of electrical energy production in different power plants and evaluate different pollution control measures in coal and nuclear power plants.

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Explain the layout, construction and working of the components inside a thermal power plant. (Understand)**

1. Mention any four-equipment used for ash collection. **(Remember)**
2. Explain briefly on draught and its types and also discuss the different types of draught systems. **(Understand)**

**COURSE OUTCOME 2: Illustrate the layout, construction and working of the components inside a Diesel, Gas and Combined cycle power plants. (Understand)**

1. Define regenerator efficiency. **(Remember)**
2. Discuss briefly on integrated gasification combined cycle and its benefits. **(Understand)**

**COURSE OUTCOME 3: Illustrate the layout, construction and working of the components inside nuclear power plants. (Understand)**

1. Mention any four ways of Nuclear Power plant safety. **(Remember)**
2. Discuss the working principle and construction of Pressurized Water Reactor and Boiling Water Reactor. **(Understand)**

**COURSE OUTCOME 4: Illustrate the layout, construction and working of the components inside Renewable energy power plants. (Understand)**

1. Enlist the classification of fuel cell. **(Remember)**
2. Explain the principle of working and construction of solar power plant using suitable sketches. State their advantages, disadvantages and applications. **(Understand)**

**COURSE OUTCOME 5: Estimate the costs of electrical energy production in different power plants and evaluate different pollution control measures in coal and nuclear power plants. (Apply)**

1. A new factory having a minimum demand of 100 kW and a load factor of 25% is comparing two power supply agencies. i) Public supply tariff is Rs. 40 per kW of maximum demand plus 2 paise per kWh. Capital cost = Rs. 70,000; Interest and depreciation = 10% **(Understand)**
2. A hydro power plant is to be used as peak load plant at an annual load factor of 30%. The electrical energy obtained during the year is  $750 \times 10^5$  kWh. Determine the maximum demand. If the plant capacity factor is 24% find reserve capacity of the plant. **(Apply)**

| 21ME7715                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | PRODUCTION PLANNING AND CONTROL                   | L                                                        | T | P                                    | C         |

**Upon completion of the course, the students will be able to:**

CO1: Outline production planning and Control objectives, functions types and Economic analysis **(Understand)**

CO2: Conduct production planning and Control activities such as work study, Time study, Production study & Work sampling in industries. **(Apply)**

CO3: Summarize product planning and process planning concepts. **(Apply)**

CO4: Plan manufacturing requirements and scheduling in Production Control systems. **(Apply)**

CO5: Discuss about inventory control and the recent trends in PPC **(Understand)**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Outline production planning and Control objectives, functions types and Economic analysis (Understand)**

1. Discuss in detail about the various functions of production planning and control. **(Understand)**
2. Enumerate the various aspects of Product design and development or Product analysis? **(Understand)**

**COURSE OUTCOME 2: Conduct production planning and Control activities such as work study, Time study, Production study & Work sampling in industries. (Apply)**

1. A work study was conducted in a machine shop. The data has been recorded as follows:

|                                          |          |
|------------------------------------------|----------|
| Total number of observations             | = 160    |
| Hand controlled work                     | = 14     |
| Machine controlled work                  | = 106    |
| Machine idle time                        | = 40     |
| Average performance rating               | = 80%    |
| No of parts produced                     | = 36     |
| Allowance for personal needs and fatigue | = 10%    |
| Duration of study                        | = 3 days |
| Available working hours/day              | =8 hrs   |

Determine the standard time per piece **(Apply)**

2. Enumerate in detail the various charts in method study with illustration and neat sketch **(Understand)**

**COURSE OUTCOME 3: Summarize product planning and process planning concepts. (Apply)**

1. Enumerate various phases in the development of a new product **(Understand)**
2. As a product planning engineer, how do you analyze the process capacities in a multi-product system and how do you document the results. **(Apply)**

**COURSE OUTCOME 4: Plan manufacturing requirements and scheduling in Production Control systems. (Apply)**

1. The processing times (including setup time) and due dates for six jobs waiting to be processed at a work centre are given in the following table. Determine the sequence of jobs, the average flow time, average tardiness, and average number of jobs at work centre for each of these rules:

**(Apply)**

- I. SPT
- II. EDD

| Job | Processing time (days) | Due date (days from present time) |
|-----|------------------------|-----------------------------------|
| A   | 2                      | 7                                 |
| B   | 8                      | 16                                |
| C   | 4                      | 4                                 |
| D   | 10                     | 17                                |
| E   | 5                      | 15                                |
| F   | 12                     | 18                                |

2. Explain Gantt chart and Line of Balance. **(Understand)**

**COURSE OUTCOME 5: Discuss about inventory control and the recent trends in PPC (Understand)**

1. Explain with a block diagram, the basic elements of JIT manufacturing system **(Understand)**
2. What are the components of Material Requirement Planning (MRP)? **(Understand)**

|                                                                                                                                                                                                                                                                                                                                                                                |                                                                      |                                                |          |           |          |

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1 Summarize the concepts of automated assembly line in industries (Apply)**

1. As the number of workstations on an automated production line increase, does line Efficiency (a) decrease, (b) increase, or (c) remain unaffected? **(Understand)**
2. An automated production line operates with an ideal cycle time of 35 sec. Line stops are characterized by a mean time between failures of 70 min and a mean time to repair of 8.0 min. What is the average hourly production rate? **(Apply)**

**COURSE OUTCOME 2 Design and performance analysis of low-cost automation using hydraulics system. (Analyze)**

1. Develop a hydraulic system to control the speed of speed of a hydraulic motor using flow control valve **(Apply)**
2. Compare the various performance factors of a gear, vane and piston pumps **(Analyze)**

**COURSE OUTCOME 3 Design and performance analysis of low-cost automation using pneumatic system. (Analyze)**

1. Consider the circuit, what happens to the cylinder when valve v<sub>4</sub> is depressed. **(Analyze)**

2. What undesirable consequence occurs when components of a pneumatics system such as pipes, and vales are undersized? **(Apply)**

**COURSE OUTCOME 4 Design and performance analysis of low-cost automation using PLC system (Analyze)**

1. Develop an electro pneumatic system for Opening/closing the flow in a pipeline. **(Analyze)**

2. Develop PLC programming for sequencing of cylinders to follow A+B+B-A- **(Apply)**

**COURSE OUTCOME 5 Design and construct the Assembly system and part feeders. (Analyze)**

1. Differentiate the part design features of automated assembly over manual assembly **(Analyze)**
2. Design a part feeder orientation system for Orienting a Cylindrical Parts whose Length is Greater than its Diameter. **(Apply)**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Interpret the basic Concepts & knowledge about sustainable manufacturing (Understand)**

1. Illustrate the sustainability in manufacturing system through green systems. **(Understand)**
2. Explain green manufacturing concepts in detail. **(Understand)**

**COURSE OUTCOME 2: Identify and apply the QFD tools required for implementing sustainable manufacturing (Apply)**

1. Explain the Extended Producer Responsibility (EPR) policy. **(Remember)**
2. Demonstrate the environmental impact of current manufacturing systems in detail with a case study. **(Apply)**

**COURSE OUTCOME 3: Conduct Life Cycle Assessment and cost analysis required for Green manufacturing (Apply)**

1. Examine how the life cycle assessment system should be in green manufacturing assessment. **(Apply)**
2. Enumerate the factors affecting the selection of material handling equipment in a production shop **(Apply)**

**COURSE OUTCOME 4: Apply the design factors and considerations for sustainable manufacturing (Apply)**

1. State the role of government, employer and workers for productivity improvement **(Understand)**
2. Apply the design factors in green manufacturing systems in detail with a case study. **(Apply)**

**COURSE OUTCOME 5: Conduct economic and environment analysis for sustainable green manufacturing systems (Apply)**

1. State the recycling techniques for different natural friendly materials **(Understand)**
2. Identify the practices, challenges and solutions of Full cost accounting methodology in developed countries. **(Apply)**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Students will be able to outline the concepts and applications of micro systems for advanced manufacturing (Understand)**

1. List out the application of MEMS in industries. **(Remember)**
2. Design a pressure sensor with a mems microsensors suitable for an engineering application. **(Understand)**

**COURSE OUTCOME 2: Students will be able to Interpret the various fabrication processes of micro systems. (Understand)**

1. Why electrostatic forces used to run micro motors rather than conventional electromagnetic forces. **(Understand)**
2. Explain the concept miniaturization of MEMS. Distinguish between micro actuator and micro accelerometer. **(Understand)**

**COURSE OUTCOME 3: Students will be able to enumerate the machines, handling tools and fixtures for the assembly of microsystems. (Understand)**

1. Interpret suitable MEMS fixtures for handling and assembly of microparts. **(Understand)**
2. Compare piezo motors and ultrasonic motors **(Understand)**

**COURSE OUTCOME 4: Students will be able to summarize the precision manufacturing processes for macro components. (Understand)**

1. What is the most accurate machining process? Why? **(Understand)**
2. Explain the working of diamond turning process? **(Understand)**

**COURSE OUTCOME 5: Students will be able to apply metrology for micro system (Apply)**

1. Select the gauge which is used to check the perfect threading in hole and explain the process and machine tool with neat sketch. **(Apply)**
2. Which parameter influence the surface integrity during rolling process and explain with neat sketch. **(Understand)**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Students will be able to Understand the fundamentals of Electro and Electroless plating (Understand)**

1. Explain briefly the principle and process of electrodeposition in Silver. (**Understand**)
2. Discuss in detail the electrolytic cleaning process. (**Understand**)

**COURSE OUTCOME 2: Students will be able to Categorize different types of plating process. (Apply)**

1. Distinguish between Barrel plating and blush plating. (**Understand**)
2. Demonstrate the application of electroforming in electroplating process with suitable example? (**Apply**)

**COURSE OUTCOME 3: Students will be able to Familiarize composite coating and its application in various fields (Understand)**

1. Explain the process of Electrodeposition of Nickel and Chromium by composite coating. (**Understand**)
2. Briefly explain the applications of composite coating in wear and tribological applications. (**Understand**)

**COURSE OUTCOME 4: Students will be able to Utilize different testing and inspection methods for predicting various parameters of electrodeposit (Apply)**

1. Determine the corrosion rate of pure aluminium metal by polarization method. **(Apply)**
2. Write a note on the testing of mechanical properties of electrodeposit. **(Understand)**

**COURSE OUTCOME 5: Students will be able to Interpret the effects of various parameters in electro and electroless plating (Understand)**

1. Explain the defects in electroplating and electroless plating along with its causes and remedies **(Understand)**
2. Write a short note on Hydrogen Embrittlement. **(Understand)**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Interpret the methods for energy saving in steam consumption systems. (Understand)**

1. Explain the Assessment of steam distribution losses **(Understand)**
2. Enumerate Types & Performances evaluation via direct and indirect method energy conservation **(Remember)**

**COURSE OUTCOME 2: Discuss about furnaces and Thermal fluid heaters, its type and application. (Understand)**

1. Explain the Furnaces and Thermic Fluid Heaters. **(Remember)**
2. Describe the Insulation and Refractory method with its types and application to new module of industries **(Understand)**

**COURSE OUTCOME 3: Enumerate the working principle employed in VCRS and VAM systems (Understand)**

1. Explain the Commercial waste heat recovery devices to process in industries **(Understand)**
2. Outline the classifications of WHR systems with suitable diagrams **(Understand)**

**COURSE OUTCOME 4: Identify the parameters considered in electricity billing and the losses associated with a motor (Apply)**

1. Obtain the Factors affecting motor performance & energy efficient motors **(Understand)**
2. Identify the Harmonics induction Motors with its Types, Losses, & performance assessment adopting direct and indirect method **(Apply)**

**COURSE OUTCOME 5: Comprehend the techniques available for energy conservation in electrical utilities (Apply)**

1. Case study the cooling towers in industries which can be alternate to use in any other places **(Apply)**
2. Identify the practices, challenges and solutions of performance assessment Industries methodology in developed countries. **(Apply)**

**Upon completion of the course, the students will be able to:**

**CO1:** Interpret the fundamentals of Jigs and fixtures **(Understand)**

**CO2:** Discuss the locating and clamping of Jigs and fixtures **(Understand)**

**CO3:** Recognize the mounting of Jigs and Fixtures on machine tool through Jigs Bushings **(Understand)**

**CO4:** Recognize the mounting of Jigs and Fixtures on machine tool through drill jigs **(Understand)**

**CO5:** Apply the design procedure for fixtures. **(Apply)**

### **COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Students will be able to interpret the fundamentals of Jigs and fixtures (Understand)**

1. Identify the differences between jig and fixtures **(Understand)**
2. Explain possible freedom of movement of job in a jig, fixture **(Understand)**

**COURSE OUTCOME 2: Students will be able to discuss locating and clamping of Jigs and fixtures (Understand)**

1. Identify locating of work piece in a jig, fixture **(Understand)**
2. list the different types of fixtures **(Understand)**

**COURSE OUTCOME 3: Students will be able to recognize the mounting of Jigs and Fixtures on machine tool through Jigs Bushings (Understand)**

1. Explain mounting of jig on a machine tool **(Understand)**
2. Describe the specifications of bushing **(Understand)**

**COURSE OUTCOME 4: Students will be able to recognize the mounting of Jigs and Fixtures on machine tool through drill jigs (Understand)**

1. Explain the indexing of drill jigs **(Understand)**
2. Describe the mounting of fixtures on the machine tool **(Understand)**

**COURSE OUTCOME 5: Students will be able to apply the design procedure for fixtures (Apply)**

1. Develop the milling, welding, fixtures and grinding fixtures **(Apply)**
2. Design procedure of jigs and fixtures **(Apply)**

**Course Outcomes**

**Upon completion of the course, the students will be able to:**

**CO1:** Discuss the need and scope of failure analysis and fundamental sources of failures. **(Understand)**

**CO2:** Interpret about non-destructive testing and basic principles of visual inspection. **(Understand)**

**CO3:** Conduct magnetic particle testing and eddy current testing with different procedures. **(Apply)**

**CO4:** Conduct radiography testing and ultrasonic testing with different procedures. **(Apply)**

**CO5:** Characterize the acoustic testing, techniques and instrumentation. **(Apply)**

### COURSE LEVEL ASSESSMENT QUESTIONS

**COURSE OUTCOME 1: Students will be able to discuss the need and scope of failure analysis and fundamental sources of failures (Understand)**

1. Illustrate about discontinuities. Explain various types of discontinuities with examples **(Understand)**
2. Compare and contrast the fundamental sources of failures with examples **(Understand)**

**COURSE OUTCOME 2: Students will be able to interpret about non-destructive testing and basic principles of visual inspection. (Understand)**

1. Illustrate the methodologies used to inspect the gear tooth profile and explain details of visual or optical inspection procedure. **(Understand)**
2. Compare and contrast the principles, characteristics detected, advantages, limitations and applications of visual inspection, liquid penetrant testing methods. **(Understand)**

**COURSE OUTCOME 3: Students will be able to conduct magnetic particle testing and eddy current testing with different procedures (Apply)**

1. Elucidate the procedure used for testing a component through Magnetic Particle Testing method and briefly explain its applications. **(Understand)**
2. Construct the block diagram of Eddy current testing method and explain its working principle. **(Apply)**

**COURSE OUTCOME 4: Students will be able to conduct radiography testing and ultrasonic testing with different procedures. (Apply)**

1. Construct the block diagram of X-ray Radiography with a neat sketch and state its advantages, limitations and applications. **(Apply)**
2. Describe in details about the working principle of Pulse echo, Transmission and Phased Array techniques with a neat sketch. **(Understand)**

**COURSE OUTCOME 5: Students will be able to characterize the acoustic testing, techniques and instrumentation. (Apply)**

1. Illustrate the working principle of Acoustic Emission testing method with a neat sketch. **(Understand)**
2. Demonstrate and explain the simple experimental test setup for Acoustic Emission testing. **(Apply)**

**Course Outcomes**

**Upon completion of the course, the students will be able to:**

- C01.** Summarize the present energy scenario and interpret the need for energy conservation measures. **(Understand)**
- C02.** Familiarize with various energy policies (National and International) & standards. **(Understand)**
- C03.** Comprehend the concepts of waste heat recovery system and perform energy analysis. **(Apply)**
- C04.** Conduct energy audit and optimize energy requirements. **(Apply)**
- C05.** Interpret the economics of energy conservation schemes in industrial energy management systems. **(Understand)**

**Text Books**

- 1. Chirla Chandra Sekhara Reddy, Gade Pandu Rangaiah, Waste Heat Recovery: Principles and Industrial Applications, World Scientific Publishing Co Pte Ltd, 2022.
- 2. Energy Conservation Guidebook, Dale R Patrick, Stephen W Fardo, 2<sup>nd</sup> Edition, CRC Press

**Reference Books**

- 1. Steve Doty, Wayne C. Turner “Energy Management Handbook”, 7<sup>th</sup> Edition, the Fairmont Press, Inc., (2013)

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Students will be able to summarize the present energy scenario and interpret the need for energy conservation measures (Understand)**

1. What are the energy-saving options available for office buildings? **(Understand)**
2. How can the construction industry promote energy conservation? **(Understand)**

**COURSE OUTCOME 2: Students will be able to familiarize with various energy policies (National and International) & standards. (Understand)**

1. How are thermic fluid heaters utilized in waste heat recovery? **(Understand)**
2. How can opportunities for energy savings be identified in waste heat recovery systems? **(Understand)**

**COURSE OUTCOME 3: Students will be able to comprehend the concepts of waste heat recovery system and perform energy analysis (Apply)**

1. Develop the design considerations which are important for waste heat recovery systems? **(Apply)**
2. How do fluidized bed heat exchangers contribute to waste heat recovery? **(Understand)**

**COURSE OUTCOME 4: Students will be able to conduct energy audit and optimize energy requirements. (Apply)**

1. What is the importance of matching energy use to requirement in energy audits? **(Understand)**
2. Optimize input energy requirements in energy audits? **(Apply)**

**COURSE OUTCOME 5: Students will be able to interpret the economics of energy conservation schemes in industrial energy management systems. (Understand)**

1. What organizational background is desirable for energy management persuasion and motivation? **(Understand)**
2. What techniques are used in analyzing energy consumption, production, and cumulative sum of differences (CUSUM)? **(Understand)**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Students will be able to interpret about the first and second law of thermodynamics and properties of gas mixtures. (Understand)**

1. State first and second law of thermodynamics (Understand)
2. Difference between open loop and closed loop systems (Understand)

**COURSE OUTCOME 2: Students will be able to summarize the chemical reactions and heat transfer in IC Engine. (Understand)**

1. Describe how equilibrium constant can be used to calculate the composition of an equilibrium mixture. (Understand)
2. What are the different types of heat transfer in an engine? (Understand)

**COURSE OUTCOME 3: Students will be able to demonstrate the models to describe the combustion of SI Engine. (Apply)**

1. Develop the practice turbulence model for SI engine (Apply)
2. Interpret the chemical kinetics modelling and its principles (Understand)

**COURSE OUTCOME 4: Students will be able to demonstrate the models to describe the combustion of CI Engine (Apply)**

1. Discuss the single zone and multizone model of combustion in SI engine (**Understand**)
2. Develop the practice model for Watson's theory of caring (**Apply**)

**COURSE OUTCOME 5: Students will be able to discuss about the thermodynamics of gas exchange process (Understand)**

1. Distinguish between isothermal and non-isothermal models (**Understand**)
2. Interpret the process of gas exchange in IC engine (**Understand**)

|                                                                                                                                                                                                                                                                                                                     |                                                     |                                                          |          |                                          |           |

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Discuss the building blocks, functions and drivers of supply chain management (Understand)**

1. Discuss in detail about decision phases in supply chain. **(Understand)**
2. Interpret the drivers of supply chain performance. **(Understand)**

**COURSE OUTCOME 2: Summarize the factors involved in network design (Understand)**

1. Summarize the framework of structuring drivers. **(Understand)**
2. Discuss in detail about factors influencing distribution network design **(Understand)**

**COURSE OUTCOME 3: Illustrate the role of logistics in industrial supply chain (Apply)**

1. Show in detail about factors affecting transportations decision. **(Understand)**
2. Determine in detail about tailored transportation. **(Apply)**

**COURSE OUTCOME 4: Interpret the role of coordination in supply chain. (Understand)**

1. Show in detail about supplier selection assessment and contracts. **(Understand)**
2. Discuss in detail about sourcing planning and analysis **(Understand)**

**COURSE OUTCOME 5: Discuss the necessity of IT in different cases of supply chain. (Understand)**

1. Summarize the supply chain IT frame work. **(Understand)**
2. Discuss in detail about E-Business in supply chain. **(Understand)**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Formulate and solve linear programming problems. (Apply)**

1. How does the formation of a Linear Programming Problem (LPP) differ from other optimization problems? **(Understand)**
2. Minimize  $Z=3x_1+2x_2$  solve by graphically.  
 Subject to  $5x_1+x_2 \geq 10$   
 $x_1+x_2 \geq 6$   
 $x_1+4x_2 \geq 12$   
 $x_1, x_2, \geq 0$  **(Apply)**

**COURSE OUTCOME 2: Develop solutions to transportation, assignment, and sequencing problems. (Apply)**

1. Obtain an initial basic feasible solution to the following transportation problem using the North-West Corner Rule. **(Apply)**

|         | $D_1$ | $D_2$ | $D_3$ | $D_4$ | Supplies |
|---------|-------|-------|-------|-------|----------|
| $S_1$   | 20    | 25    | 28    | 31    | 200      |
| $S_2$   | 32    | 28    | 32    | 41    | 180      |
| $S_3$   | 18    | 35    | 24    | 32    | 110      |
| Demands | 150   | 40    | 180   | 170   |          |

2. Use the Hungarian method to solve the following assignment problem: **(Apply)**

|       | $J_1$ | $J_2$ | $J_3$ | $J_4$ |
|-------|-------|-------|-------|-------|
| $M_1$ | 10    | 9     | 7     | 8     |
| $M_2$ | 5     | 8     | 7     | 7     |
| $M_3$ | 5     | 4     | 6     | 5     |
| $M_4$ | 2     | 3     | 4     | 5     |

**COURSE OUTCOME 3: Construct networks and analyse optimality for various applications. (Analyze)**

1. Draw the A project consists of seven activities for which the relevant data are given below:

| Activity | Preceding activities | Duration (days) |
|----------|----------------------|-----------------|
| A        | ---                  | 4               |
| B        | ---                  | 7               |
| C        | ---                  | 6               |
| D        | A, B                 | 5               |
| E        | A, B                 | 7               |
| F        | C, D, E              | 6               |
| G        | C, D, E              | 5               |

i. Draw the network. ii. Identify the critical path and find the project completion time. **(Analyze)**

2. Construct the project network for project summarized in Table Q12b. Calculate the expected duration and variance of each activity and determine the critical path and expected project completion time. **(Analyze)**

Table - Q 12b

| Activity | Predecessor (s) | Duration (week) |   |    |
|----------|-----------------|-----------------|---|----|
|          |                 | a               | m | b  |
| A        | -               | 6               | 7 | 8  |
| B        | -               | 1               | 2 | 9  |
| C        | -               | 1               | 4 | 7  |
| D        | A               | 1               | 2 | 3  |
| E        | A, B            | 1               | 2 | 9  |
| F        | C               | 1               | 5 | 9  |
| G        | C               | 2               | 2 | 8  |
| H        | E, F            | 4               | 4 | 4  |
| I        | E, F            | 4               | 4 | 10 |
| J        | D, H            | 2               | 5 | 14 |
| K        | I, G            | 2               | 2 | 8  |

**COURSE OUTCOME 4: Identify inventory models and solve for optimality. (Apply)**

1. An industry produces a particular product with a demand rate  $r = 14000$  units/year, Production rate  $k = 35,000$  units/year, set up cost  $C_o = \text{Rs. } 500$  per setup and carrying cost  $C_c = \text{Rs. } 15/\text{unit}/\text{year}$ . Determine the EBQ and cycle time. **(Apply)**
2. A newspaper boy buys papers for 30 paise each and sells them for 70 paise. He cannot return unsold newspapers. Daily demand has the following distribution. **(Apply)**

|                  |      |      |      |      |      |      |      |      |      |      |
|------------------|------|------|------|------|------|------|------|------|------|------|
| No. of customers | 23   | 24   | 25   | 26   | 27   | 28   | 29   | 30   | 31   | 32   |
| Probability      | 0.01 | 0.03 | 0.06 | 0.10 | 0.20 | 0.25 | 0.15 | 0.10 | 0.05 | 0.05 |

**COURSE OUTCOME 5: Analyse queuing characteristics and compute the optimum replacement period for capital equipment and items that fail suddenly. (Analyze)**

1. A machine owner finds from his past records that the costs per year of maintaining a machine, whose purchase price is Rs.6000, are as given below, Determine at what age a replacement is due. **(Analyze)**

|                  |      |      |      |      |      |      |      |      |
|------------------|------|------|------|------|------|------|------|------|
| Yr.              | 1    | 2    | 3    | 4    | 5    | 6    | 7    | 8    |
| Maintenance cost | 1000 | 1200 | 1400 | 1800 | 2300 | 2800 | 3400 | 4000 |
| Resale price     | 3000 | 1500 | 750  | 375  | 200  | 200  | 200  | 200  |

2. The following mortality rates have been observed for a certain type of light bulbs.

|                                    |    |    |    |    |     |
|------------------------------------|----|----|----|----|-----|
| Week                               | 1  | 2  | 3  | 4  | 5   |
| Percent failing by the end of week | 10 | 25 | 50 | 80 | 100 |

There are 1000 bulbs in use and it costs Rs.2 to replace an individual bulb, which has burnt out. If all the bulbs were replaced simultaneously, it would cost 50 paise per bulb. Find the average cost of group replacement policy. **(Analyze)**

| 21ME7727                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Introduction to NANO Technology                           | L                                                        | T | P                                    | C         |

**Course Outcomes**

**Upon completion of the course, the students will be able to:**

**CO1:** Interpret the basics in nano sciences and scales using in this technology. **(Understand)**

**CO2:** Summarize the classification of nano materials. **(Understand)**

**CO3:** Outline the various synthesizing methods for nanomaterials. **(Understand)**

**CO4:** Discuss the fabricating methodologies and characterization techniques for nano materials. **(Understand)**

**CO5:** Demonstrate the applications of nanotechnologies in various fields. **(Apply)**

**Text Books**

1. Hari Singh Nalwa, "Nanostructured Materials and Nanotechnology", Academic Press, (2012)
2. Pradeep T., "A Textbook of Nanoscience and Nanotechnology", Tata McGraw Hill Education Pvt. Ltd., (2016)

**Reference Books**

1. Charles P. Poole Jr., Frank J. Ownes, 'Introduction to Nanotechnology', Wiley Interscience, (2003)
2. Dupas C., Houdy P., Lahmani M., "Nanoscience: Nanotechnologies and Nanophysics", Springer-Verlag Berlin Heidelberg, (2007)
3. Mark Ratner and Daniel Ratner, "Nano Technology", Pearson Education, New Delhi, (2003)
4. Nabok A., "Organic and Inorganic Nanostructures", Artech House, (2005)
5. Bhusan, Bharat (Ed), "Springer Handbook of Nanotechnology", 2ndEdition, (2007)

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Students will be able to interpret the basics in nano sciences and scales using in this technology. (Understand)**

1. Discuss about the implications of Nano Technology. **(Understand)**
2. Write a technical note on "Time and length scale in structures ". **(Understand)**

**COURSE OUTCOME 2: Students will be able to summarize the classification of nano materials. (Understand)**

1. Make short note on Metal based Nano materials. **(Understand)**
2. Explain Synthesis of Nanoparticles through Homogenous and Heterogeneous Nucleation. **(Understand)**

**COURSE OUTCOME 3: Students will be able to outline the various synthesizing methods for nanomaterials. (Understand)**

1. Discuss in detail different types of ball-milling and their advantages. **(Understand)**
2. Write in detail the special magnetic properties of nanomaterials with special reference to Super para magnetism. **(Understand)**

**COURSE OUTCOME 4: Students will be able to discuss the fabricating methodologies and characterization techniques for nano materials. (Understand)**

1. Explain in detail how XRD analysis is important in nanomaterial characterization. **(Understand)**
2. Explain in detail size and surface, morphological analysis of nanostructures using SEM. **(Understand)**

**COURSE OUTCOME 5: Students will be able to demonstrate the applications of nanotechnologies in various fields. (Apply)**

1. Discuss the advantages and basic principles of Nano sensors. **(Understand)**
2. Explain in detail about the case study using Plasmonics. **(Apply)**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Students will be able to outline the behavior and applicability of various smart materials. (Understand)**

1. Explain the diverse areas of intelligent materials. **(Understand)**
2. Write short notes on Biomimetics. **(Understand)**

**COURSE OUTCOME 2: Students will be able to discuss the behavior of smart materials and structural systems. (Understand)**

1. List the properties of Micro sensors and its applications. **(Understand)**
2. Explain in detail about the Reactive actuator based smart structures **(Understand)**

**COURSE OUTCOME 3: Students will be able to summarize the properties and behavior of Electro-Rheological material. (Understand)**

1. Explain the Working Principle and application of ER Fluids. **(Remember)**
2. Compare ER Fluids with Other Smart Materials. **(Understand)**

**COURSE OUTCOME 4: Students will be able to interpret the properties and applications of Piezoelectric smart materials. (Understand)**

1. List and explain the Industrial piezoelectric materials. **(Understand)**
2. Distinguish the difference between Pyroelectricity and Piezoelectricity. **(Understand)**

**COURSE OUTCOME 5: Students will be able to infer knowledge on the characteristics and applications of SMA material. (Understand)**

1. Explain in detail about characteristics of Nitinol. **(Understand)**
2. Describe the application of SMA in nuclear reactors. **(Understand)**

|          |                    | 3 | 0 | 0 | 3 |

**Prerequisites for the course**

Nil

**Objectives**

- To understand the basics of drone concepts
- To learn and understand the fundamentals of design, fabrication and programming of drone
- To impart the knowledge of drone flying and operation
- To know about the various applications of drone
- To understand the safety risks and guidelines of fly safely

|               |                                         |          |
|---------------|-----------------------------------------|----------|
| <b>UNIT I</b> | <b>INTRODUCTION TO DRONE TECHNOLOGY</b> | <b>9</b> |
|---------------|-----------------------------------------|----------|

Drone Concept - Vocabulary Terminology- History of drone - Types of current generation of drones based on their method of propulsion- Drone technology impact on the businesses- Drone business through entrepreneurship- Opportunities/applications for entrepreneurship and employability

|                |                                                  |          |
|----------------|--------------------------------------------------|----------|
| <b>UNIT II</b> | <b>DRONE DESIGN, FABRICATION AND PROGRAMMING</b> | <b>9</b> |
|----------------|--------------------------------------------------|----------|

Classifications of the UAV -Overview of the main drone parts- Technical characteristics of the parts - Function of the component parts -Assembling a drone- The energy sources- Level of autonomy- Drones configurations -The methods of programming drone- Download program - Install program on computer- Running Programs- Multi rotor stabilization- Flight modes -Wi-Fi connection.

|                 |                                   |          |
|-----------------|-----------------------------------|----------|
| <b>UNIT III</b> | <b>DRONE FLYING AND OPERATION</b> | <b>9</b> |
|-----------------|-----------------------------------|----------|

Concept of operation for drone -Flight modes- Operate a small drone in a controlled environment Drone controls Flight operations -management tool -Sensors-Onboard storage capacity - Removable storage devices- Linked mobile devices and applications

|                |                                      |          |
|----------------|--------------------------------------|----------|
| <b>UNIT IV</b> | <b>DRONE COMMERCIAL APPLICATIONS</b> | <b>9</b> |
|----------------|--------------------------------------|----------|

Choosing a drone based on the application -Drones in the insurance sector- Drones in delivering mail, parcels and other cargo- Drones in agriculture- Drones in inspection of transmission lines and power distribution -Drones in filming and panoramic picturing

|               |                                 |          |
|---------------|---------------------------------|----------|
| <b>UNIT V</b> | <b>FUTURE DRONES AND SAFETY</b> | <b>9</b> |
|---------------|---------------------------------|----------|

The safety risks- Guidelines to fly safely -Specific aviation regulation and standardization- Drone license- Miniaturization of drones- Increasing autonomy of drones -The use of drones in swarms

|                      |  |           |
|----------------------|--|-----------|
| <b>Total Periods</b> |  | <b>45</b> |
|----------------------|--|-----------|

**Suggestive Assessment Methods**

| <b>Continuous Assessment Test<br/>(20 Marks)</b>  | <b>Formative Assessment Test<br/>(20 Marks)</b>          | <b>End Semester Exams<br/>(60 Marks)</b> |
|---------------------------------------------------|----------------------------------------------------------|------------------------------------------|
| Descriptive exam<br>CAT 1 10 AND<br>CAT2 10 MARKS | MCQ QUIZ / SEMINAR/<br>ASSIGNMENT/SLIPTEST/CASE<br>STUDY | 1.<br><b>Descriptive<br/>Questions</b>   |

**Course Outcomes**

**Upon completion of the course, the students will be able to:**

- CO1:** Discuss the various types and concepts of drone technology. **(Understand)**  
**CO2:** Summarize the fundamentals of drone fabrication and programming. **(Understand)**  
**CO3:** Interpret the knowledge of drone flying and operations. **(Understand)**  
**CO4:** Develop a drone mechanism for specific applications. **(Apply)**  
**CO5:** Discuss the guidelines for safety flying of a drone. **(Understand)**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Discuss the various types and concepts of drone technology (Understand)**

1. Describe in details about types of current generation of drones based on their method of propulsion **(Understand)**
2. Explain briefly about the Opportunities/applications for entrepreneurship and employability **(Understand)**

**COURSE OUTCOME 2: Summarize the fundamentals of drone fabrication and programming. (Understand)**

- 1 Explain the technical characteristics of the parts of Drone and Functions of the component parts of drone. **(Understand)**
- 2 Describe the methods of programming which are stored inside the drone. **(Understand)**

**COURSE OUTCOME 3: Interpret the knowledge of drone flying and operations (Understand)**

1. Describe the operations of a small drone in a controlled environment **(Understand)**
2. Interpret the classifications of Removable storage devices and linked mobile devices and briefly explain the applications of this storage devices **(Understand)**

**COURSE OUTCOME 4: Develop a drone mechanism for specific applications. (Apply)**

- 1 Demonstrate the applications of drones in agriculture. **(Apply)**
- 2 Illustrate the applications of drones in inspection of transmission lines and power distribution and also Drones in filming and panoramic picturing. **(Apply)**

**COURSE OUTCOME 5: Discuss the guidelines for safety flying of a drone. (Understand)**

1. Explain the guidelines to fly safely and Specific aviation regulation and standardization and in Drone license. **(Understand)**
2. Describe the methods of miniaturization of drones for Increasing autonomy of drones and also describe the use of drones in swarms. **(Understand)**

**CO Vs PO Mapping and CO Vs PSO Mapping**

| CO  | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|------|------|
| CO1 | 1   | 2   |     |     |     | 3   |     |     |     |      |      | 1    |      | 3    |
| CO2 | 1   | 2   |     |     |     | 3   |     |     |     |      |      | 1    |      | 3    |
| CO3 | 1   | 2   |     |     |     | 3   |     |     |     |      |      | 1    |      | 3    |
| CO4 | 1   | 2   |     |     |     | 3   |     |     |     |      |      | 1    |      | 3    |
| CO5 | 1   | 2   |     |     |     | 3   |     |     |     |      |      | 1    |      | 3    |

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Illustrate the representation of various safety concepts and principles followed in Real Time Industries (Understand)**

1. Illustrate the various media available and used for extinguishing fire. **(Understand)**
2. Enlist various safety measures while working on plants **(Remember)**

**COURSE OUTCOME 2: Outline the chemical exposures in industries and industrial toxicology (Understand)**

1. How hazards are monitored and can be controlled at the workplace in chemical industry? **(Remember)**
2. Discuss Industrial Toxicology and how toxic chemicals will effect on humans? **(Understand)**

**COURSE OUTCOME 3: Classify the various types of environmental hazards in workplace, effects and its control measures (Understand)**

1. List out the various kinds of PPE and how it will protect against humans? **(Remember)**
2. Discuss in detailed procedure to eliminate noise in working environment using hierarchy of controls technique **(Understand)**

**COURSE OUTCOME 4: Apply various hazard analysis and risk assessment techniques in industries (Apply)**

1. Construct fault tree for cotton disease involved in textile industry and evaluate using gate by gate method **(Apply)**
2. Outline the FMEA Procedures and develop the FMEA check sheet with suitable example. **(Understand)**

**COURSE OUTCOME 5: Demonstrate the various safety standards in industries with the help of case studies (Apply)**

1. Illustrate the Bhopal Gas Tragedy Disaster 1984 **(Apply)**
2. Outline the Chapter III under Factories Act 1948 **(Understand)**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: List the basic concepts of atoms ,equivalence mass and energy (Understand)**

1. Derive mass energy equivalence equation and explain the term mass defect and its significance. (U)
2. Write short notes on Rutherford model of an atom .(U)

**COURSE OUTCOME 2: Interpret the nuclear reactions and reaction materials (Apply)**

1. Explain the nuclear fuel. What is chain reaction? How it is measured? What is the difference between controlled and uncontrolled chain reaction? (U)
2. Draw and explain the solvent extraction equipment in following cases. (A)
  - (i) Explain in brief how uranium material is produced and purified.
  - (ii) Write short notes on the purification of thorium and beryllium materials
3. Explain the process of uranium production and purification. (U)

**COURSE OUTCOME 3: Describe the nuclear fuel cycle and its characteristics (Understand)**

1. Explain about the nuclear safety inspections. (U)

2.How the nuclear plant safety system works in Shutdown to cooling the fuel. (U)

**COURSE OUTCOME 4: Demonstrate about the functions of different nuclear reactor (Apply)**

1. Describe the boiling water reactor with the help of neat sketch and explain its chief characteristics(U)
2. Illustrate the boiling water reactor power plant. (A)
3. Write short notes on the following(U)
  - [i] Boiling water reactor
  - [ii] Fast breeder reactor.

**COURSE OUTCOME 5: Discuss about the safety and disposal methods of nuclear waste (Understand)**

- 1.Explain about the nature of wastes generated from each stage of nuclear fuel cycle. (A)
- 2.Explain about the disposal of gaseous nuclear wastes with a diagram. (U)

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Describe the renewable energy scenario all over the world (Understand)**

1. Describe the types of Solar power plant. What are the limitations of solar power plant? (U)
2. Illustrate the conventional and unconventional energy sources. Describe briefly. (U)

**COURSE OUTCOME 2: Explain the basics of solar energy and its applications. (Understand)**

1. Classify the methods of solar energy storage. Describe thermal energy storage system. (U)
2. Discuss the main components of a flat-plate collector. Explain the functions of each and write its advantage and disadvantage of flat plate collector. (U)

**COURSE OUTCOME 3: Apply the principles of energy estimation in wind energy. (Apply)**

1. Determine the operation and control of wind turbine. (A)
2. Describe the main applications of wind energy. Giving neat sketches. (U)

**COURSE OUTCOME 4: Explain about biogas digesters and cogeneration plant. (Understand)**

1. Explain the process of photo synthesis. What are the necessary conditions of it? (U)
2. Discuss the factors affecting Bio digestion (U).

**COURSE OUTCOME 5: Compare different renewable energy sources and construct a hybrid system. (Understand)**

1. Differentiate open cycle OTEC system and Closed OTEC cycle. (U)
2. Explain briefly how prime movers for geothermal energy conversion are classified and elaborate it. (U).

**Outcomes**

**Upon completion of the course, the students will be able to:**

- CO1:** Distinguish the basic concepts of additive manufacturing and its applications. **(Understand)**
- CO2:** Demonstrate the software's for additive manufacturing technology. **(Apply)**
- CO3:** Construct liquid and solid based additive manufacturing and its applications. **(Apply)**
- CO4:** Illustrate power based additive manufacturing and its applications. **(Apply)**
- CO5:** Apply the possibilities and limitations in medical and bio additive manufacturing. **(Apply)**

## **COURSE LEVEL ASSESSMENT QUESTIONS**

### **COURSE OUTCOME 1: Distinguish the basic concepts of additive manufacturing and its applications (Understand)**

1. Write a note on the impact of AM on product development. (U)
2. Describe a) Virtual prototyping b) Rapid Tooling. (U)

### **COURSE OUTCOME 2: Demonstrate the software's for additive manufacturing technology. (Apply)**

1. Explain the geometric modeling techniques? (U)
2. Demonstrate the techniques used in Tool path generation? (A)

### **COURSE OUTCOME 3: Construct liquid and solid based additive manufacturing and its applications.(Apply)**

1. Illustrate about strength, Weakness and applications of SGC? (A)
2. What are the steps in pre build and post-build process for LOM? (U)

### **COURSE OUTCOME 4: Illustrate power based additive manufacturing and its applications. (Apply)**

1. Discover the effect of surface deviation in LENS? (A)
2. What is indirect SLS and direct SLS. Explain the same. (U)

### **COURSE OUTCOME 5: Apply the possibilities and limitations in medical and bio additive manufacturing. (Apply)**

1. Prepare the design and production of customized implants and prosthesis. (A)
2. Discuss in detail about Computer Aided Tissue Engineering. (U)

| This course aims to introduce students to the important aspects of research. The intent of the course is to make students aware of the details associated with formal research and to help students overcome common mis conceptions that may be present in their minds. By going through this course, students are likely to be able to take up research activities in a more systematic and formal manner right from the beginning |                                  |                                             |          |                                      |          |

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1:** List the various stages in research and categorize the quality of research problem. **(Apply)**

1. Discuss the applications of research from the view point of
  - (i) The service provider
  - (ii) The administrator, manager and/or planer
  - (iii) The Consumer
  - (iv) The Professional **(Apply)**
2. Discuss the types of research on different perspectives say application perspective, objective perspective and mode of enquiry perspective. **(Apply)**
3. Identify two research questions, related to your professional area, that could be answered by undertaking each of the following types of research.

- a. Descriptive Research b. Correlational research
- c. Explanatory Research d. Exploratory research (Analyze)
- 4. Draw the research process “onion’ (Understand)

**COURSE OUTCOME 2:** Formulate a research problem from published literature/journal papers. **(Apply)**

- 1.Undertake a keyword search for a theme or issue that interests you using (a) an Internet search engine, such as Google Scholar, and (b) a library search facility. Compare the results (analyze)
- 2.Discuss about the source of information for literature review. (Understanding)
- 3.Write a short notes on “Note Taking” (Understand)

**COURSE OUTCOME 3:** Select appropriate research method for a defined problem **(Apply)**

- 1.List the sources of research problems (Understand)
- 2.Elaborate the considerations in selecting a research problem (Understand)
- 3.Discuss in details about steps in formulating a research problem (Understand)
- 4.Select a broad subject area of interest to you and ‘dissect’ it. (Apply)

**COURSE OUTCOME 4:** Prepare review/ research paper, select suitable journal and submit a paper **(Apply)**

- 1.What is meant by indexing? Why it is needed? (Understand)
- 2.Discuss in detail about the “Intellectual Property Rights” (Understand)
3. Explain the systematic approach to prepare and review papers. (Apply)

**COURSE OUTCOME 5:** Prepare research report and presentation **(Apply)**

1. Discuss any two software tools in preparing thesis in required format. (Apply)
2. Design two-minute paper presentations. Prepare one slide showing a plot of the major results from a research project. Deliver two-minute presentations on the topic showing only one slide of results. (Analyze)

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1 Enumerate the fundamentals of solar system in atmospheric and environment effects. (Understand)**

1. How Do We Generate Electricity From The Sun?(U)
2. What Happens With A Solar Pv System At Night And On Cloudy Days? (U)
3. How Do I Get Started With Solar? (U)

**COURSE OUTCOME 2 Describe the solar photovoltaic system in a various field in world energy requirement. (Understand)**

1. Explain the Stand alone PV system. (U)
2. Explain the Grid connected PV system (U)

**COURSE OUTCOME 3 Design solar cell in various techniques for suitable infrastructure with required enhanced Properties. (Apply)**

1. Explain the Working principle of solar cell. (U)
2. Demonstrate about solar cell technologies in crystalline & poly crystalline cells.(A)

**COURSE OUTCOME 4 Demonstrate the site area of selection using the fundamentals of roof, grid with the components of solar PV system. (Apply)**

1. Predict the criteria level for site selection of solar photovoltaic (PV)(A)
2. Examine the Site Selection for a Solar Power Plant in SPV System.(A)

**COURSE OUTCOME 5 Examine the fundamentals of PV cells in an energy conversion with the help of PV applications. (Apply)**

- 1.Explain about the solar PV generation (U)
2. Interpret the energy conversion in solar photovoltaic cell & its applications (A)

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Recognize the importance of energy engineering and suggest measures for improving per capita energy consumption (Understand)**

1. Describe the concept of energy planning. (R)
2. Write short notes on Energy conservation Act. (U)

**COURSE OUTCOME 2: Identify the working of electrical systems (Understand)**

1. Examine the power loss for motors and improvement of motor efficiency. (R)
2. Explain the electrical load management and maximum demand control. (U)

**COURSE OUTCOME 3: Suggest methodologies for energy recovery using boilers (Apply)**

1. Explain the performance evaluation of boilers. (R)
2. Examine the process of condensate recovery and flash steam utilization. (A)
3. An oil-fired boiler is generating 30 T/hr steam and operates for 8000 hrs/ year. The TDS in boiler feedwater was reduced from 500 ppm to 200 ppm. The maximum permissible limit of TDS in the boiler is 3000 ppm and make up water is 10%. Temperature of the blow down water is 170 C and boiler feedwater temperature is 40 C .GCV of fuel is 10000kcal/kg and efficiency of the boiler is 80%. Calculate the saving in fuel oil per annum due to reduction in the blow down. (A)

**COURSE OUTCOME 4: Assess the sources of additional revenue generation for energy conservation projects Adopting UNFCCC (Apply)**

1. Explain Green house concept. (R)
2. Describe the United Nations Framework Convention on Climate Change (U)
3. Compose the case study of Clean Development Mechanism (CDM) (A)

**COURSE OUTCOME 5: Analyse the energy sharing and cost sharing pattern of fuels used in industries (Apply)**

1. Integrate the need for energy audit and compose the types of energy audit. (R)
2. Illustrate the various instruments used for energy auditing. (U)
3. The contract demand of plant is 1000 kVA. The minimum billing demand is 75% of the contract demand. The basic tariff structure is as follows: Demand charges: Rs. 180 per kVA / month Unit charges: Rs. 3.75 for the first one lakh units / month Rs. 3.50 above one lakh units / month Fuel surcharge: Rs. 0.20 per unit / month Service Tax: Rs. 0.25 per unit / month Meter rent: Rs 500 / month The energy consumption is 3, 15,000 units and the maximum demand recorded is 600 kVA. Calculate the cost of monthly electricity. (A)

**Outcomes**

**Upon completion of the course, the students will be able to:**

**CO1** Recite the basic concepts of probability distribution (**Understand**)

**CO2** Describe the fundamental principles of Design of Experiment process for optimization (**Understand**)

**CO3** Examine Taguchi's approach to experimental design for robust design (**Apply**)

**CO4** Calculate Taguchi's approach to tolerance design process for S-N ratio (**Apply**)

**CO5** Illustrate the concepts in reliability principles in the design of an engineering product (**Apply**)

**Text Books**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Understand the basic concepts of probability distribution (Understand)**

1. Write down the guidelines for Design of Experiments. (R)

2. Explain the concept of probability and its functions. (U)

**COURSE OUTCOME 2: Apply fundamental principles of Design of Experiment process for Optimization (Understand)**

1. Write down the procedure for two-level experimental designs for two factors. (R)
2. Explain the types of design methods with arrays. (U)

**COURSE OUTCOME 3: Describe the Taguchi's approach to experimental design for robust design (Apply)**

1. Write short notes on Quadratic loss function.(R)
2. Explain the concept of Taguchi's quality philosophy. (U)
3. Illustrate the steps in Robust design process. (A)

**COURSE OUTCOME 4: Describe the Taguchi's approach to tolerance design process for S-N ratio (Apply)**

1. Write short notes on Signal to Noise ratio (S-N).(R)
2. Explain the concepts of design strategy. (U)
3. Examine the procedure for Design using Orthogonal Array with suitable examples. (A)

**COURSE OUTCOME 5: Familiarized with concepts in reliability principles in the design of an engineering product (Apply)**

1. Write short notes on Cause and Effect diagrams. (R)
2. Briefly explain the survival and failure.(U)
3. Elaborate the concept of Reliability, MTBF, MTTF in detail. (A)

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                |                                                                     |          |                                      |           |

**Outcomes**

**Upon completion of the course, the students will be able to:**

- CO1 Apply the principles of engineering economics in estimating the economic efficiency. **(Apply)**  
 CO2 Choose either to make or buy a product based on economic specialized concepts. **(Apply)**  
 CO3 Compare the various methods in cash flow to find the optimal method. **(Analyze)**  
 CO4 Categorize the replacement and maintenance analysis based on economic life of an asset. **(Analyze)**  
 CO5 Apply the concepts of depreciation and inflation in evaluation of public alternatives. **(Apply)**

**Textbooks**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1** Apply the principles of engineering economics in estimating the economic efficiency. **(Apply)**

1. Trace out the flow of goods, services, resources and money payments in an economy with suitable sketch. **(Understand)**
2. Enumerate briefly the various cost concepts. Establish the cost-output relationship in the short-run with suitable diagram. **(Apply)**
3. From the following figures extracted from the book of Beta associates, find the following.
  - i. Break-even sales quantity,
  - ii. Break-even sales,
  - iii. If the actual production quantity is 60,000, find a. contribution, b.Margin of safety. Data:- Fixed cost = Rs.10,00,000 Variable cost per unit = Rs.50 and Selling price per unit = Rs.100**(Apply)**

**COURSE OUTCOME 2 Choose either to make or buy a product based on economic specialized concepts. (Apply)**

1. As an engineer how will you calculate single payment compound amount factor?

Illustrate your answer with examples. **(Understand)**

2. Explain value engineering procedure. **(Understand)**
3. A company has extra capacity that can be used to produce a sophisticated fixture which it has been buying for Rs.900 each. If the company makes the fixtures, it will incur material cost of Rs 300 per unit, labour cost of Rs.250 per unit and variable overhead cost of Rs.100 per unit. The annual fixed cost associated with the unused capacity is Rs.10,00,000. Demand over the next year is estimated at 5,000 units. Would it be profitable for the company to make the fixtures?**(Apply)**

**COURSE OUTCOME 3 Compare the various methods in cash flow to find the optimal method. (Analyze)**

1. Summarize the different types of rate of return methods in engineering decision making. **(Understand)**
2. A firm is diversifying into new business. The life of the business is 10 years without any salvage value at the end of its life. The initial outlay required is Rs.20,00,000/- and the annual net profit estimated is Rs.3,50,000/- Find rate of return for the new business. Check whether the business is worth for a cost of capital of 12%.**(Apply)**
3. Arova industry is planning to expand its production operation. It has identified two different technologies for meeting the goal. The initial outlay and annual revenues with respect to each of the technologies are summerised in the below given table. Suggest the best technology which is to be implemented based on the present worth method of comparison assuming 20% interest rate compounded annually. **(Analyze)**

|              | Initial outlay | Annual revenue | Life (years) |
|--------------|----------------|----------------|--------------|
| Technology 1 | 6,00,000       | 2,00,000       | 10           |
| Technology 2 | 10,00,000      | 3,00,000       | 10           |

**COURSE OUTCOME 4 Categorize the replacement and maintenance analysis based on economic life of an asset. (Analyze)**

1. Illustrate annual equivalent total cost with suitable examples and state its limitations **(Understand)**
2. Three years earlier Coimbatore corporation purchased a 10HP motor for pumping drinking water and its useful life was estimated as 10 years. But due to rapid development, it is unable to meet demand per water. The options available are either to augment the capacity with an additional 5 HP motor or to replace the existing 10 HP motor with a new 15HP motor. The data on the two options are follows. **(Apply)**

| Details of motors       | Old 10HP motor | New 10HP motor | New 15HP motor |
|-------------------------|----------------|----------------|----------------|
| Purchase cost(P) in Rs. | 25,000         | 12,000         | 32,000         |
| Life in years(n)        | 10             | 7              | 7              |

|                                                   |       |       |       |
|---------------------------------------------------|-------|-------|-------|
| Salvage value at the end of the machine life(Rs.) | 1,500 | 800   | 5,000 |
| Annual O&M cost(Rs.)                              | 1,600 | 1,000 | 500   |

3. A firm is considering replacement of an equipment, whose first cost is Rs.1,750 and the scrap value is negligible at any year. Based on experience, it was found that the maintenance cost is zero during the first year and it increases by Rs.100 every year thereafter.

When should the equipment be replaced if  $i = 0\%$

When should the equipment be replaced if  $i = 12\%$

**(Analyze)**

**COURSE OUTCOME 5 Apply the concepts of depreciation and inflation in evaluation of public alternatives. (Apply)**

1. Elucidate the different methods of calculating depreciation. **(Understand)**
2. Two equipments are purchased each for Rs.12,000. The estimated useful life is 5 years for both; the estimated scarp value for each equipment is Rs.2000. For one equipment the straight line method is used to calculate the annual depreciation and for the other equipment, the reducing balance method is adopted. Compare the depreciation charges for both for all the 5 years. **(Apply)**
3. Two mutually exclusive projects are being considered for investment. Project A1 requires an initial outlay of Rs. 50,00,000 with net receipts estimated to be Rs. 11,00,000 per year for the next eight years. The initial outlay for the project A2 is Rs. 80,00,000, and net receipts have been estimated at Rs. 20,00,000 per year for the next eight years. There is no salvage value associated with either of the projects. Using the BC ratio, which project would you select? Assume an interest rate of 15%. **(Apply)**

**Course Outcomes**

**Upon completion of the course, the students will be able to:**

- C01:** Interpret the impact of government policies on the general economic welfare. **(Understand)**  
**C02:** Choose appropriate decisions regarding volume of output and to evaluate the social cost of production. **(Apply)**  
**C03:** Determine the functional requirement of a firm under various competitive conditions. **(Apply)**  
**C04:** Identify the overall performance of the economy, and the regulation of economic fluctuations and its impact on various sections in the society. **(Apply)**  
**C05:** Determine the impact of changes in global economic policies on the business opportunities of a firm. **(Apply)**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**CO1: Students will be able to Interpret the impact of government policies on the general economic welfare. (Understand)**

1. Why does the problem of choice arise? **(Remember)**
2. How do we solve the basic economic problems? **(Understand)**

**CO2: Students will be able to Choose appropriate decisions regarding volume of output and to evaluate the social cost of production. (Apply)**

1. Explain the term producer equilibrium. **(Understand)**
2. Suppose a chemical factory is functioning in a residential area. What are the external costs? **(Apply)**

**CO3: Students will be able to determine the functional requirement of a firm under various competitive conditions. (Apply)**

1. Explain the equilibrium of a firm under monopolistic competition. **(Remember)**
2. Apply any one method of non-price competition under oligopoly for retail shop. **(Apply)**

**CO4: Students will be able to Identify the overall performance of the economy, and the regulation of economic fluctuations and its impact on various sections in the society. (Apply)**

1. Enumerate the measures to control inflation. **(Remember)**
2. Determine the GDP of our country. **(Apply)**

**CO5: Students will be able to Determine the impact of changes in global economic policies on the business opportunities of a firm. (Apply)**

1. Enumerate the arguments in favor of protection. **(Understand)**
2. Suppose a foreign country imposes a tariff on Indian goods. How does it affect India's exports? **(Apply)**

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                             |          |   |   |           |

**Course Outcomes**

**Upon completion of the course, the students will be able to:**

- C01:** Define ergonomics and its components. **(Understand)**  
**C02:** Apply statistical treatment of data in anthropometry design. **(Apply)**  
**C03:** Identify the various assessment methods for ergonomic improvement. **(Apply)**  
**C04:** Utilize the ergonomic principles in assigning task to the workers. **(Apply)**  
**C05:** Apply ergonomics to propose an effective work place design with safety. **(Apply)**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**C01: Students will be able to define ergonomics and its components - (Understand)**

1. What are the fundamentals of ergonomics and human factors? **(Remember)**
2. What is the role of questionnaire surveys in ergonomic evaluation? **(Understand)**

**C02: Students will be able to apply statistical treatment of data in anthropometry design. (Apply)**

1. How is statistical treatment of data used in anthropometry? **(Understand)**
2. Apply a suitable anthropometric measuring techniques for generating data for shop floor. **(Apply)**

**C03: Students will be able to identify the various assessment methods for ergonomic improvement. (Apply)**

1. Mention the biomechanical and physiological implications of frequently changing posture from sitting to standing? **(Understand)**
2. Compare and contrast the Rapid Upper Limb Assessment (RULA) method and Rapid Entire Body Assessment (REBA) **(Apply)**

**C04: Students will be able to utilize the ergonomic principles in assigning task to the workers. - (Apply)**

1. What strategies can be employed to enhance an individual's physical work capacity? **(Understand)**
2. With a help of any technique assess the mental workload in an automobile assembly section of an industry. **(Apply)**

**C05: Students will be able to apply ergonomics to propose an effective work place design with safety - (Apply)**

1. Explain the process of analyzing workplace design from an ergonomics perspective? **(Understand)**
2. Apply any one technique in identifying the essential elements available in an oil refinery industry for an effective ergonomic planning **(Apply)**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Students will be able to outline the different types of pollution, their sources and effects. (Understand)**

3. Write a brief note on Governmental rules related to bio medical wastes. **(Understand)**
4. Discuss the criteria followed in selecting the pollution control equipment. **(Understand)**

**COURSE OUTCOME 2: Students will be able to interpret the pollution control regulations and standards (Understand)**

3. Discuss about the design considerations in selecting flocculators and aerators in water pollution control. **(Understand)**
4. What is the role of pumps in water pollution control. Explain the significance of reciprocating pump in pollution control. **(Understand)**

**COURSE OUTCOME 3: Students will be able to summarize the equipments for air pollution control (Understand)**

3. Explain the criteria for selection of air pollution control equipment. **(Understand)**
4. Explain with neat sketch the working principle, advantages and disadvantages of Electrostatic Precipitator **(Understand)**

**COURSE OUTCOME 4: Students will be able to Discuss different methods of pollution control from various sources in air, water and soil (Understand)**

3. Explain the types of vacuum filters used in solid processing. **(Understand)**
4. Mention the factors considered in selecting dewatering equipment. **(Understand)**

**COURSE OUTCOME 5: Students will be able to Identify and use the suitable pollution monitoring equipments for air and water samples (Apply)**

3. How water sample can be analysed for pollutants. Briefly discuss its methods **(understand)**
4. Explain how cold storage systems are predominant in pollution control. Justify your answers **(Apply)**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Students will be able to discuss the need and identify the suitable energy storage devices for applications. (Understand)**

1. Outline the various forms of energy storage methodologies **(Understand)**
2. Compare and contrast thermal and electrochemical methods of energy storage in commercial applications. **(Understand)**

**COURSE OUTCOME 2: Students will be able to illustrate the working of various energy storage devices and their importance. (Understand)**

1. Differentiate pumped air storage and compressed air storage. **(Understand)**
2. Explain the various methods involved in evaluating the performance of storage systems **(Understand)**

**COURSE OUTCOME 3: Students will be able to select the specification of batteries for mobile and hybrid storage systems. (Apply)**

1. What are the parameters you will consider in selecting the storage device for heart pacemaker. Justify them **(Apply)**
2. Identify the factors need to be considered in selecting the storage device for electric vehicles. **(Apply)**

**COURSE OUTCOME 4: Students will be able to discuss the storage of renewable energies and conduct energy audit. (Apply)**

1. Explain the methods involved in storing energy from wind. **(Understand)**
2. With a case study, conduct an energy audit in Air Conditioning System and provide a solution for energy efficiency. **(Apply)**

**COURSE OUTCOME 5: Students will be able to explain the need for other energy devices and their scope for applications. (Understand)**

1. Explain the various methods available for storing biogas at onsite conditions **(Understand)**
2. What is SMES? Mention its significance **(Understand)**

# **OPEN ELECTIVE - IV**

|                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                         |                                                          |   |                                      |           |

**COURSE LEVEL ASSESSMENT QUESTIONS****COURSE OUTCOME 1: Students will be able to summarize the various elements in digital manufacturing. (Understand)**

1. Discuss the various key aspects of Digital manufacturing. **(Understand)**
2. List the practical benefits of Digital Manufacturing. **(Remember)**

**COURSE OUTCOME 2: Students will be able to illustrate the concepts involved in digital product development life cycle process and supply chain management in digital environment. (Understand)**

1. Briefly discuss the scope and challenges available in digital supply chain management. **(Understand)**
2. Write a brief note on Digital mockup and prototype development. **(Understand)**

**COURSE OUTCOME 3: Students will be able to select the proper procedure of validating practical work through digital validation in Factories. (Apply)**

1. What are the various levels of smart factories. Explain each with its salient features **(Understand)**
2. How can digital validation be effectively utilized to validate practical work in automotive industries. **(Apply)**

**COURSE OUTCOME 4: Students will be able interpret the concepts of IoT and its role in digital manufacturing. (Understand)**

1. Write short notes on Cloud computing. **(Understand)**
2. Differentiate IoT and IIoT. **(Understand)**

**COURSE OUTCOME 5: Students will be able to outline various practical manufacturing process through digital twin. (Understand)**

1. Outline the characteristics of a good digital twin atmosphere. **(Understand)**
2. With suitable block diagram, explain the various components of digital twin. **(Understand)**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Students will be able to understand the types of marine vehicles (Understand)**

1. Explain the general classifications of marine vehicles. **(Understand)**
2. Write short notes on oil and chemical tankers. **(Understand)**

**COURSE OUTCOME 2: Students will be able to describe the design and safety considerations in reefers and gas carriers (Understand)**

1. Explain briefly the safety considerations in reefers and gas carriers. **(Understand)**
2. Describe the precautionary steps involved in bunkering of marine vehicles. **(Understand)**

**COURSE OUTCOME 3: Students will be able to distinguish between Remotely Operable Vehicle (ROV), Unmanned Machinery Space (UMS) ships (Apply)**

1. With a case study, discuss the components to be employed in ROV for underwater pipeline applications. **(Apply)**
2. Discuss the controls and operations of UMS ships **(Understand)**

**COURSE OUTCOME 4: Students will be able to classify the various submersible vehicles with its applications (Understand)**

1. Explain the components of AUV with neat sketches. **(Understand)**
2. Discuss the navigation and control strategies followed in AUV. **(Understand)**

**COURSE OUTCOME 5: Students will be able to describe the various components of manned and unmanned submersibles. (Understand)**

1. Distinguish the design consideration to be followed between manned and unmanned vehicles. **(Understand)**
2. Discuss in detail the components used in unmanned marine vehicles. **(Understand)**

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                  |                                                          |          |                                      |           |

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Students will be able to perceive the safety management concepts and accident prevention methods. (Understand)**

1. Discuss about the safety education and training in accident prevention. **(Understand)**
2. Explain the various accident prevention methods in detail. **(Understand)**

**COURSE OUTCOME 2: Students will be able to apply appropriate measuring and /or insulating equipment, use of fire extinguishers and safe earthing practices (Apply)**

1. What are the safety considerations to be followed in earthing systems? Brief them. **(Understand)**
2. How safety can be ensured in fire extinguishers. Explain them with a case study. **(Apply)**

**COURSE OUTCOME 3: Students will be able to list the hazards in chemical industries during transporting, storing and processing to ensure safe plant operations (Understand)**

1. Discuss the various types of chemical hazards and explain its control measures. **(Understand)**
2. What are the guidelines to be followed in the safe transfer of chemicals? Explain in brief. **(Understand)**

**COURSE OUTCOME 4: Infer suitable PPE based on the type of industry and standards. (Understand)**

1. Types and characteristics of head protectors **(Understand)**
2. When canister or cartridge type respirator should not be used? Explain your answers with justification **(Understand)**

**COURSE OUTCOME 5: Implement the techniques like risk assessment disaster management and emergency preparedness with the proper knowledge on accident prevention. (Apply)**

1. What is Total Loss Control? What are the four steps involved in managing the loss control **(Understand)**
2. In a factory rough casting of 15 Kg. are fettled by hand on a pedestal grinder (dia 12"). The castings are picked up from nearby store, fettled on the grinder and replaced on the floor on the other side of the machine. Carry out job safety analysis and prepare the job breakdown sheet. **(Apply)**

**Course Outcomes**

**Upon completion of the course, the students will be able to:**

- CO1: Express the basic concepts, laws, components and parameters of robots **(Understand)**  
 CO2: Discuss about drive system and the types of grippers and its functions. **(Understand)**  
 CO3: Summarize the various types of sensors involved in controlling the robots **(Understand)**  
 CO4: Interpret the various programming techniques used in industrial robots **(Understand)**  
 CO5: Identify the use of robots in various field of applications **(Apply)**

**COURSE LEVEL ASSESSMENT QUESTIONS**

**COURSE OUTCOME 1: Students will be able to express the basic concepts, laws, components and parameters of robots (Understand)**

1. Sketch and explain the four basic robot configurations classified according to the coordinate system. **(Understand)**
2. Write short notes on Joint notation scheme. **(Understand)**

**COURSE OUTCOME 2: Students will be able to Discuss about drive system and the types of grippers and its functions. (Understand)**

1. Explain various types of Gripper mechanisms in robot. **(Understand)**
2. Explain how grippers are selected for high temperature applications? Justify your answers with gripper selection factors and considerations. **(Understand)**

**COURSE OUTCOME 3: Students will be able to summarize and determine various types of sensors involved in controlling the robots (Understand)**

1. Briefly explain the working principle of position sensors with neat sketch. **(Understand)**
2. Explain the working principle of Proximity sensors with neat sketch. **(Understand)**

**COURSE OUTCOME 4: Students will be able to describe the various programming techniques used in industrial robots (Understand)**

1. List the commands used in VAL II programming and describe its functions. **(Understand)**
2. Write down the capabilities and limitations of Lead through methods. **(Understand)**

**COURSE OUTCOME 5: Students will be able to Identify the use of robots in various field of applications (Apply)**

1. With necessary outline, discuss the application of robots in packaging industries **(Apply)**
2. With a case study, explain the applications of robot in underwater inspection. **(Apply)**

# **VALUE ADDED COURSES**

| 21ME3V01                                                                                                                                                                                                                                                                                          | DIGITAL PROTOTYPING USING SOLIDWORKS                     | L         | T | P | C |

### Outcomes

Upon completion of the course, the students will be able to:

- CO.1** Explain the fundamentals of various Additive Manufacturing (AM) techniques.
- CO.2** Describe the working principle, capability, limitation and applications of liquid, solid and powder based additive manufacturing techniques.
- CO.3** Choose a suitable AM technique for the specified application.
- CO.4** Compare different AM process and materials based on application.
- CO.5** Explore the range of 3D printing and Prototyping technologies and their application for industrial, design, and creative field.
- CO.6** Explain current and emerging 3D printing applications for various industrial environment.

| The course is aimed at giving exposure to and enhancing the knowledge and skills of fresh graduate engineers and engineers involved in the operation use of 3D Scanners and 3D printing / additive manufacturing with the aid of CAD packages and for those who want to provide training to others in this area. It gives exposure and on hand experience in the field of CAD packages, 3D Scanner and AM format.                                                                           |                                                    |          |          |          |          |

### Laboratory Requirements

Stratasys FDM Machine  
3-D Scanner  
Reverse Engineering Software

### Suggestive Assessment Methods

| Continuous Assessment Test<br>(30Marks)          | Lab Components Assessments<br>(20 Marks)                      | End Semester Exams<br>(50 Marks) |
|--------------------------------------------------|---------------------------------------------------------------|----------------------------------|
| 2 Test EACH 15marks<br>MCQ/Descriptive Questions | Experiments and record of work<br>(10) & Model practical (10) | Descriptive Questions            |

### Outcomes

#### Upon completion of the course, the students will be able to:

- CO1** Develop 3D solid model using B-rep and CSG techniques.
- CO2** Explain the different CAD data exchange formats.
- CO3** Describe the working principle of different solid component scanning techniques
- CO4** Explain the different stages of reverse engineering and object digitization
- CO5** Construct curve, surface and solid models using AM editing software (Practical)
- CO6** Convert the different AM data formats (Practical)

**Outcomes**

**Upon completion of the course, the students will be able to:**

- CO1:** Explain the concept of preprocessing and slicing for additive manufacturing.
- CO2:** Compare the different features of AM packages
- CO3:** Explain the data processing techniques for additive manufacturing
- CO4:** Discuss the different post processing methods
- CO5:** Select a process parameter for different AM techniques
- CO6:** Perform AM simulation and fabricate 3D physical product using appropriate RP machines (Practical)

**Prerequisites for the course**

- Additive Manufacturing Technologies and Applications
- CAD for Additive manufacturing
- 3D Printing and Prototyping
- Design for additive Manufacturing

**Objectives**

- To prepare students to work in teams to solve open-end designing and manufacturing problems and to develop the necessary skills for using modern AM technology.
- To make the students work in small groups following the typical stages of product development -designing, prototyping and manufacturing - in one continuous project.
- To teach use of new tools and techniques required to carry out the projects.
- To give guidance on the various procedures for validation of the product and analyze the cost effectiveness.
- To provide guidelines to prepare technical report of the project.

**SUGGESTED PROBLEM APPROACH**

- Analyze the situation and come up with more than one possible technical solution. Choose one and justify why it is the best.
- For the selected design, produce complete technical documentation going from the hand sketches to the fully dimensioned CAD files.
- Make physical, fully functioning prototypes to verify form, fit, and function. - Analyze the prototype for design and functional flaws. Prepare the final model and report to turn in, and give a public presentation.

**PROJECT ASSUMPTIONS**

- Designing, prototyping and manufacturing facilities are at different locations and a system of communication has to be used to set up the working links between these locations.
- Work-in-progress should be accessible by all the participating team members. A proper file management system has to be developed and used.
- Project evaluation is based on quality and completion of listed “things to do”. Students’ statements are required to say what the involvement of each member of the group was.
- Each project should begin with work scheduling; Microsoft Project software is recommended to accomplish this. Meetings with faculty are scheduled bi-weekly (or by appointment) to analyze work-in-progress.

**PROJECT ASSESSMENT**

The project is structured to ensure that each team makes steady progress on the project throughout the semester, with adequate time at the end of the semester to allow for a variety of printing methods.

|   |                              |   |
|---|------------------------------|---|
| 1 | Team Project Idea Submission | 5 |
| 2 | First Project Part file      | 5 |

|   |                                                      |    |
|---|------------------------------------------------------|----|
| 3 | First Project Printed Part                           | 10 |
| 4 | Final Project CAD files                              | 15 |
| 5 | Final Project Printed Parts                          | 10 |
| 6 | Final product assembly – functional test and quality | 25 |
| 7 | Final Printed Project & Presentation                 | 30 |

The project is structured to ensure that each team makes steady progress on the project throughout the semester, with adequate time at the end of the semester to allow for a variety of printing methods,

### SAMPLE PROJECT DETAILS

The team started the project with a hand sketch to show the idea of the mechanism and its location in the machinery. An Internet search of results for similar objects was required for this part of the project. Documentation - project documentation required use of a CAD package. The required documentation format was an assembly drawing as a solid model, and a detailed 3-D drawing file as the necessary technical documentation for prototyping, manufacturing, inspection, and production preparation.

Prototyping - the next step was prototyping, or making physical models. Using additive method plastic objects were built on the FDM. This machine builds precision objects layer by layer. This method is useful for shape and fit evaluation. There were two important issues in this stage of the project. AutoCAD (Mechanical Desktop) and Reverse engineering, AM software from the courses. A third file format, stereolithography (STL files), was created for use by the 3D printer. When conversions were done, the new formats were inspected for possible errors before proceeding with prototyping. Analysis at this stage of the project concentrated on two elements: design flaws: fitting parts together and possibilities of design improvements by reducing the weight and material selection, as well as developing a concept of manufacturing and adapting the design to the process requirements.

#### Outcomes

#### Upon completion of the course, the students will be able to:

- CO.1 Apply tools and techniques acquired in AM courses for development of new product.
- CO.2 Adapt an efficient problem-solving method in analysing industrial product needs.
- CO.3 Formulate a real world problem, identify the requirement and develop the design solutions.
- CO.4 Identify technical ideas, strategies and methodologies for prototyping
- CO.5 Test and validate through conformance of the developed prototype and analysis the cost effectiveness.
- CO.6 Prepare technical report and oral presentations.
